

April 29, 2026

Genesee County Economic Development Center Board of Developers:

I am writing to express my support for the proposed STREAM US Data Centers, LLC project at the Science & Technology Advanced Manufacturing Park (STAMP) site in Genesee County.

It is my understanding that STREAM US Data Centers will generate a direct private investment of approximately \$19.4 billion. This historic investment in our region will generate additional benefits for the entire community.

During construction, the project is expected to create over 1,200 jobs for workers in the skilled trades annually over five years of construction. Once fully operational, STREAM will create 125 good paying, family sustaining jobs as well as indirect jobs with small businesses and contractors across the region.

The project will generate \$285 million in revenues for local taxing jurisdictions, including school districts. Further, at full build out, the project will generate approximately \$270 million in local sales tax revenue from electricity usage. These revenues will enhance local public services and critical infrastructure, including water systems across Genesee County.

STREAM US Data Centers has committed to being a good corporate citizen and neighbor and has pledged to engage the community throughout the review process and address issues associated with water usage, lighting, and noise. It is a transformative economic development project and a once-in-a-lifetime opportunity for the betterment of Genesee County for generations to come.

I strongly urge your support of the STREAM US Data Centers, LLC project at STAMP.

Sincerely,

Howard Konar

Board Chair, Konar Properties

I oppose the massive data center complex at STAMP in the Town of Alabama.

In a March 2026 report from Good Jobs First, a non-profit, non-partisan research organization on economic development incentives, it was determined that "...this is a direct transfer of wealth from every resident of Genesee County to Apollo Global Management, one of the world's biggest private equity firms...This is not an industry that requires public financial support to do their private business."

In addition, this center will negatively impact our GLOW region due to:

- Air pollution
- Water pollution
- Harmful impacts to wildlife & local sportfishing industry
- Higher electricity rates
- Increased brownouts & blackouts
- 24/7 light
- 24/7 low frequency noise and attendant health and environmental problems
- Lower property values
- Loss of biodiverse wetlands and productive farmland
- Lack of respect for the neighboring Tonawanda Seneca Nation's lands & traditions

...all for a few local jobs. Profits will benefit the speculative multi-billion data center industry and an undisclosed Big Tech operator.

I am a public school teacher.

I oppose the massive data center complex at STAMP in the Town of Alabama.

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

- 1) Reject the incentives application;
- 2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;
- 3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;
- 4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.
- 3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;
- 4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;
- 5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Please protect the Indigenous community. They have suffered enough.

Sincerely,

Corinne St. Martin

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

My concern isn't so much the STAMP project, as laws are in place to follow regulations. I'm more concerned about the proliferation of the selling of drugs on the native lands. You speak of quality of life with a data center coming. Not sure the quality of life is better when you're inundated with people from all over coming to buy Marijuana. Seems you speak with forked tongue.

Sincerely,

Joe citizen

- 3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;
- 4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;
- 5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Enough people in the proposed area have said NO, respect their choice. They are the reason you have taxpayer funds in the first place; it's their money, not yours.

Sincerely,

Louise Dover

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

- 1) Reject the incentives application;
- 2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;
- 3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;
- 4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.
- 3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;
- 4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;
- 5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Megan Dembinski

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic \$19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately \$285 million for local taxing jurisdictions, including school districts, and roughly \$270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

- 5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Adam and Lindsey Ayala

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

- 1) Reject the incentives application;
- 2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;
- 3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;
- 4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.
- 3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;
- 4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;
- 5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Subject: No financial incentives to Project Double Reed

Dear Genesee County Economic Development Center CEO Mark Masse,

Pursuant to General Municipal Law 859-a, I am writing to oppose the proposed financial incentives for Project Double Reed.

The applicable General Municipal Law requires GCEDC to produce a "written cost-benefit analysis by the agency that identifies the extent to which a project will create or retain permanent, private sector jobs; the estimated value of any tax exemptions to be provided; the amount of private sector investment generated or likely to be generated by the proposed project; the contribution of the project to the state's renewable energy goals and emission reduction targets as set forth in the state energy plan adopted pursuant to [section 6-104 of the energy law](#); the likelihood of accomplishing the proposed project in a timely fashion; and the extent to which the proposed project will provide additional sources of revenue for municipalities and school districts; and any other public benefits that might occur as a result of the project." In addition, the law requires GCEDC to identify the owner/operator of the facility to the public.

GCEDC has failed to produce such a cost-benefit analysis or inform the public of the data center's identity and thus these hearings are insufficient as a venue in which to solicit public comment. Moreover, Project Double Reed's use of 250 MW of energy per year and consumption of 60,000 gallons of diesel fuel per year - with associated emissions of 533 tons of CO2 per year - as well as its squandering of 10,000 gallons of water per day clearly violate the state's renewable energy goals and emission reduction targets. Any financial incentives for Project Double Reed would thus violate the stipulations of the General Municipal Law.

Additionally, I am writing to issue the following demands:

- GCEDC must produce the written cost-benefit analysis of Project Double Reed as stipulated in the General Municipal Law, must widely circulate this report, and must hold another round of public hearings with significant advance notice to the public and at a time that accommodates the involvement of people who work a standard 9am-5pm schedule
- GCEDC must immediately disclose the identity of the owners/operators of Project Double Reed
- GCEDC must publicly provide the completed applications required by GMU 589-a(4) and the uniform criteria for evaluation and selection of projects required by GMU 589-a(5)

- GCEDC must ensure that Stream Data Centers carry out a third-party verified robust, comprehensive noise study of Project Double Reed and widely publicize the results
- In all aspects of public process pertinent to Project Double Reed, GCEDC must follow the new Environmental Justice Siting Law, which prohibits projects that impose disproportionate pollution burdens on disadvantaged communities like the Tonawanda Seneca Nation
- In all aspects of public process pertinent to Project Double Reed, GCEDC must follow CP-29 on Environmental Justice and provide enhanced public participation opportunities to the Tonawanda Seneca Nation and the public at large

GCEDC's February 3, 2025 public hearings are flagrantly inadequate and illegal; constitute a violation of the public trust; and manifest an utter lack of regard for the impact of data centers on the Tonawanda Seneca Nation, residents of the Great Lakes bioregion, and the health and well-being of our shared environment. GCEDC must address these failures and hold a new round of hearings.

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

- 1) Reject the incentives application;
- 2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;
- 3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;
- 4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.
- 3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;
- 4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;
- 5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

A 500 megawatt draw on our failing power grid and one 1.46 billion in tax incentives that New York State can't afford in the first place. No

Sincerely,

mike vinci

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic \$19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately \$285 million for local taxing jurisdictions, including school districts, and roughly \$270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

- 1) Reject the incentives application;
- 2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;
- 3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;
- 4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.
- 3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;
- 4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;
- 5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Alexis Lingenfelter

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic \$19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately \$285 million for local taxing jurisdictions, including school districts, and roughly \$270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

- 1) Reject the incentives application;
- 2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;
- 3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;
- 4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.
- 3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;
- 4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;
- 5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Melanie Russ

Data centers have been disasters for every community they've been built in. They pollute the water, cause electric bills to skyrocket, and have been linked to much higher cancer rates. No one wants this except developers, tech bosses, and their cronies.

Sincerely,

Sarah Amandes

No tax breaks and higher regulation on the effects on the environment. Already pay a fortune for energy bc they are updating their system. Why should they get a tax break AND challenge our water supply etc

Sincerely,

Heather Whiting

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic \$19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately \$285 million for local taxing jurisdictions, including school districts, and roughly \$270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Beth Weir

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

- 1) Reject the incentives application;
- 2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;
- 3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;
- 4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.
- 3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;
- 4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;
- 5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Siobhan OLoughlin

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic \$19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately \$285 million for local taxing jurisdictions, including school districts, and roughly \$270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

- 1) Reject the incentives application;
- 2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;
- 3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;
- 4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.
- 3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;
- 4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;
- 5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Jeff Olson

Sent: Monday, April 20, 2026 12:20 PM
To: streampublichearing@gcedc.com
Subject: STAMP Data Center - Public Comment

To the Genesee County Economic Development Center (GCEDC):

My name is Daniela Castillo, Program Director at El Puente de Williamsburg. El Puente is a human rights institution founded in 1982 with a mission to inspire and nurture leadership for peace and justice. El Puente's programming is based in NYC (Southside of Williamsburg and Bushwick, two "DAC" neighborhoods in North Brooklyn), as well as Puerto Rico. With national and international impact, El Puente directly serves approximately 12,000 individuals annually from nine youth Leadership Centers across the Southside of Williamsburg and Bushwick, Brooklyn and Rio Piedras, Puerto Rico. El Puente creates community-led movements of self determination among low-income peoples. These individuals and their families face high barriers of access to employment and educational opportunities, affordable and adequate housing, and arts and cultural preservation.

We submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

Our organization is committed to the just implementation of the Climate Leadership and Community Protection Act. The proposed data center lies within a Disadvantaged Community, as designated by the Climate Justice Working Group, which subjects this project to review under the CLCPA. Per Section 7(3) of the law, in considering and issuing permits, licenses, and other administrative approvals and decisions, all state agencies, offices, authorities, and divisions shall not disproportionately burden Disadvantaged Communities. Given the threats posed by this project to the Tonawanda Seneca Nation which lies within this Disadvantaged Community, and our overarching respect for Indigenous sovereignty, we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of NYS Department of Environmental Conservations' recommendations with respect to the SEQR environmental review process, and call on GCEDC to:

- 1) Reject the incentives application;
- 2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;
- 3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;
- 4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts;
- 3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that construction is forecast to take at least five years;
- 4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public; and

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

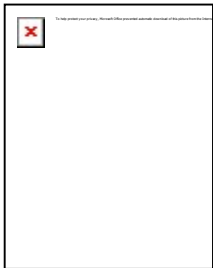

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation. It also threatens our Climate Law and violates the sovereignty and way of life of the Tonawanda Seneca Nation.

In closing: we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of DEC's recommendations with respect to the SEQR environmental review process, and call on GCEDC to reject the incentives application from STREAM US Data Centers.

Sincerely,

Daniela Castillo

To: GCEDC <gcedc@gcedc.com>
Subject: GCEDC: You must answer the public's questions about the data center applicants.

Dear GCEDC,

I am aware that GCEDC has declined to hold a new set of public hearings on the financial incentives requested by each of the three developers seeking to site a noxious data center at WNY STAMP. This is outrageous.

At the start of the February 3 public hearings, which were held with little notice on a Monday at 2 pm, GCEDC announced it would not answer any questions. GCEDC cannot allocate hundreds of millions in taxpayer dollars to subsidize a development that will produce no public benefits and copious public harms, will squander 195-250 megawatts per year of our precious low-cost Niagara River hydropower for minimal jobs and massive corporate profit - all while refusing to answer public questions about the proposed projects and their respective Environmental Assessment Forms, each of which is riddled with internal contradictions and errors, baseless claims, and critical gaps of information.

GCEDC must respond to the following set of demands, widely publicize the results, and hold a well-advertised public meeting on a weekday evening at which representatives of GCEDC and each of the three investor groups answer the public's many questions about these projects:

- GCEDC must produce the written cost-benefit analysis of Projects Potentia, Rampart, and Double Reed as stipulated in the General Municipal Law and must widely circulate these reports;
- GCEDC must publicly provide the completed applications required by GMU 589-a(5)*;
- GCEDC must ensure that each of the project applicants carries out a third-party verified comprehensive noise study of their project and widely publicizes the results;
- GCEDC must carry out a third-party verified comprehensive hydrological study of impacts from proposed and current development at STAMP, including impacts with respect to flooding risk;
- GCEDC must carry out a third-party verified comprehensive study on the economic impacts of proposed and current development at STAMP to the Oak Orchard River watershed;
- GCEDC must carry out a third-party verified comprehensive study on the impacts of current and future development on STAMP to local and regional EMS services, including what additional services will be required to address those impacts and to ensure the public safety;

A data center at STAMP would profoundly harm Tonawanda Seneca Nation's woods and waterways, destroy local ecologies, and undermine the quality of life and wellbeing of Nation citizens and other local residents. It would be a bad deal for Genesee County. GCEDC must show basic respect for its neighbors: meet these demands and answer the public's many questions.

Sincerely,

Nancy Stein

- 1) Reject the incentives application;
- 2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;
- 3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;
- 4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.
- 3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;
- 4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;
- 5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

streampublichearing@gcedc.com

Subject: Stream project

I am a Town of Alabama resident and am totally against giving the Stream project any tax incentives. It's a big stretch to call a data center economic development. If a project with this few positives, goes forward the very least the company could do is pay its fair share of taxes.

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

- 1) Reject the incentives application;
- 2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;
- 3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;
- 4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.
- 3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

We don't need to continuously using taxpayers funds to subsidize multi million dollar corporations!!! No reason to pollute water and land for greedy corporations and we need to stop destroying the habitat for animals and humans!!

Sincerely,

Brian Hellner

- 1) Reject the incentives application;
- 2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;
- 3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;
- 4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.
- 3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;
- 4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;
- 5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Kathleen Kubacki

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

- 1) Reject the incentives application;
- 2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;
- 3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;
- 4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.
- 3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;
- 4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;
- 5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Catherine Kubacki

Comments to the GCEDC STREAM Data Project

Submitted by Andrew Coldstein

April 17, 2026

The G C E D C must publish the Climate Leadership and Community Protection Act (CLCPA) Analysis for this project as required by DEC before your final review.

This is no trivial matter.

In the TechTeam Memo 3.11.26 reads:

GCEDC may retain a separate Air Emissions consultant to fully review air emission materials. Thus, more comments may be forthcoming.

And from STREAM Air Emissions Technical Summary 4.6.26:

In December 2022, NYDEC issued its guidance, DAR – 21, to outline the requirements of the CLCPA for air permit applications. This policy only applies to air facility registrations “where DEC determines analysis is necessary or appropriate to ensure CLCPA consistency such as projects with significant GHG emissions.” A CLCPA analysis for the project is required and will be submitted under separate cover.

This CLCPA Analysis should include all GHG emissions, including both Scope 1 and Scope 2 emissions.

Also, due to the large expenditure (\$15,000,000,000) of server hardware, as well as extensive use of concrete, Scope 3 or embodied carbon should be

disclosed. The server hardware carbon should reflect probable purchasing over a 15-year timeframe.

The Data Center operations will produce over 1.2 million metric tons of CO₂ annually. That is the equivalent of 300,000 cars off the road annually.

If you don't trust my numbers, I implore you to publish your analysis before taking any further actions.

Second, I urge you to require this energy monster to be Carbon Neutral. It is important for these mega-wealthy corporations, as they consolidate their ownership of this country's means of productions, to be at least, not adding to our earth's global warming.

Therefore, I ask that, as part of the economic package, That Stream Data contribute the equivalent of Carbon Offsets to mitigate its 1.8 million tons of scope 2 and 3, carbon emissions.

Accordingly, mitigation or carbon offsets would best be accomplished by funding to local and statewide forestry and natural wildlife projects.

A carbon-offset mitigation Plan, including STREAM DATA annual financial outlays, should be reported as part of your CLCPA Analysis.

So much harm this facility will do, and to what little help it will provide our families, our homes, our work places, and our singular planet.

Thank you.

To: streampublichearing@gcedc.com
Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic \$19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately \$285 million for local taxing jurisdictions, including school districts, and roughly \$270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Monica Creighton

- 3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;
- 4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.
- 3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;
- 4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;
- 5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

I have visited around this area to view the Northern Lights, a natural phenomenon which are only visible in low-light areas. I oppose the creation of a data center at this site for many reasons including the water use, likelihood of price rises in electricity for citizens, and desecration of the unique natural area. This is a unique attraction which brings value to the WNY region for viewing. There are very few low light areas

preserved currently and we must leave these sites intact! I call on our governor Hochul to consider the sentimental and aesthetic value of the natural area and preserve what is left!

Sincerely,

Ava Swiatowy

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

- 1) Reject the incentives application;
- 2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;
- 3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;
- 4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.
- 3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;
- 4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

Subject: Opposition to STAMP data center

To whom it may concern;

I understand that public hearings have already been held, but I want to be sure that my comments are registered in opposition of the STAMP data center project.

1. We are yet again relinquishing land in Genesee County just as we have to solar farms, how much more land can we let go? (Oh and by the way, where are the electricity incentives for those? My bill has been the biggest it's been in the 36 years I've lived in Genesee County)
2. Speaking of electricity, there is sure to be a surge in electricity that we, the residents of Genesee county will pay for. It never ends up being the corporation, so please don't insult your own intelligence or anyone else's by claiming that they will be on the hook for their own electricity usage.
3. The massive use of water I feel like doesn't even need to be mentioned. It's a disgusting misuse of a precious resource.
4. The AI bubble is going to burst and we will be left with a monstrous facility, empty and land that is no longer useful.
5. 125 jobs? At an AI facility of that size? That is not enough, so surely the oversight is not there, not to mention the plan is to most likely drop the number to half in the next five years as that is the entire. point. of. AI. They want to take jobs away from people to give to machines to increase their profit margins.

Please, as with a vast majority of residents, do not build this data center. The ROI is not there for the county, it's people, or our environment. Stop thinking about money for one minute and think about our community. This is not what we want.

Sincerely,
Betsy Harris

Subject: STREAM DATA CENTER

As a lifelong resident of Genesee County I'm begging you to please see the foolishness of allowing this project to move forward. These Data Centers are already littered across our state and create a burden on our utilities while adding little to no benefit that comes close to offsetting the negative impact that they bring with them. Please do the right thing. Listen to the public that you serve and tell STREAM not in our state.

Regards,

JEREMY W KARAS

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic \$19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately \$285 million for local taxing jurisdictions, including school districts, and roughly \$270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Gary Heigl

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Even the corporations who are creating artificial intelligence, admit that it's dangerous and could lead to the extinction of the human race. Yet hundreds of these corporations are engaged in a vicious competition to dominate the market. Every day there are data centers, breaking ground all across this country and around the world. When is enough enough? Many of these data centers are not going to succeed in this vicious contest then all of that money that you spent will be wasted, and all of that land destroyed all that water used up for nothing and all that pollution for nothing.

Sincerely,

- 2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;
- 3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;
- 4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.
- 3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;
- 4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;
- 5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Christina Felsrn

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

- 1) Reject the incentives application;
- 2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;
- 3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;
- 4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.
- 3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;
- 4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;
- 5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

No data centers!

Sincerely,

Adrien Behn

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

- 1) Reject the incentives application;
- 2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;
- 3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;
- 4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.
- 3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;
- 4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;
- 5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Barb Mruczek

I am avid about ornithology and all kinds of nature and I think it is quite frankly appalling to think that building a data center that would negatively impact the environment and species within it would ever be a good idea. Biodiversity is key and ruining already dwindling environments for your data centers is sickening, let alone spending such an egregious amount of money on it. Think about how this would impact future generations, even just 10 years down the line. Let that sit with you.

Sincerely,

Honor'a Long

Stop raising our taxes to cut corporations tax responsibilities. They ruin our environment and do nothing for our community! AI data centers will raise energy costs and who does that fall on, not the corporations, us citizens. End corporate welfare! Enough is Enough!

Sincerely,

Christina Zeck

Investing in the health and well-being of our region and communities must come before corporate interests. Data centers are energy hogs, polluters, and net negatives for the communities where they are housed. We should be looking to block it altogether, not giving them incentives to exploit us and our environments.

Sincerely,

Noah Tamarkin

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

- 1) Reject the incentives application;
- 2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;
- 3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;
- 4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.
- 3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;
- 4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;
- 5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Julianna Drumheller

Rochester power is already too expensive! We can't afford a giant data center sucking up all the electricity.

Sincerely,

Ryan Cheevers-Brown

Subject: Say NO to Stamp Data Center

To whom it may concern,

Just type the words 'data center'" into any search engine and the result will be news story after news story about communities that have been ruined by data centers. From invasive, unending noise pollution, to falling property values- a data center in Genesee county makes no sense economically. We hear that it's going to create jobs and revenue. And while that will be true for a time, the long-term cost is far too high.

The most devastating effect, though, will be the impact a data center would have on the environment for years to come. The location could not be worse. The water pollution alone makes the entire thing not worth it. Money cannot replace precious, diverse ecosystems. Go to Google Earth. Look at the satellite images. You can see creeks running through out that entire area of the proposed data center, running into the local water system. Look at how close it is to the Iroquois Wildlife Refuge, a place I love to go with my family, where we have seen dozens of dozens of species of birds, fish, insects, native plants. Please get you priorities straight.

Do you want to ruin the quality of life for local residents, plants, and animals, all in the name of \$\$? The choice is obvious: we, the people of Genesee county, remind you that sometimes the appeal of a big paycheck can cloud one's vision. What will you choose, and why?

I am an employee in the technology industry. Private, high-margin industries such as the technology sector do not need NY subsidies and should be held to a high standard of environmental care - ensuring limited impact to water, electricity, and local communities. This proposal do not meet any baseline that should be acceptable to you or any other NY resident, and will raise prices for our communities while harming New York's environment. Any lobbyist telling you otherwise is a liar.

Sincerely,

Chris Partridge

- 3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;
- 4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;
- 5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

From: NY Renews <noreply@ny-renews.solidarity.tech>

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

- 1) Reject the incentives application;
- 2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;
- 3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;
- 4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.
- 3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;
- 4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;
- 5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Lena Issa

Addendum to my previous comment:

500 megawatts converted to BTU's equals: 1,706,071,000 BTU/h.

1.7 billion BTU's if heat being generated every hour of every day into the local atmosphere and climate.

Sincerely,

Marty Stucko

- 5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Austin Greene

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

- 1) Reject the incentives application;
- 2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;
- 3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;
- 4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.
- 3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;
- 4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;
- 5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Solar and wind developers, foreign corporations, and New York State looks at this land today and thinks to themselves... "Wow, look at all this empty space! Perfectly cleared for a renewable complex."

This isn't just open space. At all. It seems those running our New York State agencies missed 7th grade science class that touched on what ecosystems, organisms, and habitats are.

This is an imperiled habitat, a grassland ecosystem that's one of the last of its kind. It's a home to dozens of state-endangered and threatened species. It's home to wetlands, to rare plants. It's part of a greater ecosystem that includes the small farm fields around it.

Over the last few centuries, many grassland species have come to rely on small farms for habitat as well.

You're looking at the convergence of nature and homesteading, an example of man and nature working together in tandem.

That's how it's been in the American countryside for hundreds of years, where food is grown by local families as opposed to massive corporations. Where species go from grasslands to agricultural spaces peacefully. Where you can hear bird calls and peepers at dusk from miles away.

This isn't open space at all. It's home. It's a home to people, families, organisms, endangered species with nowhere else to go, native plants, creeks and rivers, and history.

Without this "open space," landscape-level ecological loss would ensue. That means the ecological fallout would extend into other states - and even countries (our neighbor to the north).

This open space does a lot more for the environment than solar industrial complexes that strip topsoil, compact the ground, chainlink fence-off hundreds of acres, spray herbicides to manage vegetation under the panels, and abandon equipment 3 feet below the ground when it's time to decommission.

This open space is the foundation of our country and the creatures that inhabit this earth with us. And it's worth fighting for.

Sincerely,

From: NY Renews <noreply@ny-renews.solidarity.tech>

None of this data plant follows NYS green initiative. From sound pollution, light pollution, water pollution and use (it has been shown that these closed systems do infact release waste water back into our environment) and energy use. Being placed directly next to a nature preserve definitely does not make sense. Especially since some of the projects making this site ready already violated environmental laws in 2023 when a waste water pipeline dumped drilling fluids into the protected land. What's to stop this

company from continuing these unsafe practices while constructing and running these plants. Please look around the country at what these data centers do to the surrounding areas and note the towns cities and states banning data centers because they are horrible for the environment and our health. What benefits would this plant bring. Hardly any jobs, sure for a couple years while building, but 125 after that is miniscule. And this place should not be given any tax breaks if allowed to build. They should be paying for the people of the surrounding towns and county's taxes and increased energy and water bills.

Sincerely,

Holly Fuest

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

- 1) Reject the incentives application;
- 2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;
- 3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;
- 4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.
- 3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;
- 4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;
- 5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Taxpayer dollars should not be used for developing a data center. Energy production is already strained. We don't need to PAY for a company to strain the system even more. Please do not allow the project to move forward.

Sincerely,

Lynette Engelke

Subject: STAMP AI Datacenter

GCEDC,

I am a resident of neighboring Rochester NY with many friends and family who live outside of Buffalo and the surrounding WNY region between. After seeing outreach by the Tonawanda Seneca Nation for the public to oppose a datacenter being proposed at STAMP, I felt compelled to act. I truly believe Datacenters and the AI models and companies they serve are environmentally detrimental to their surrounds and will lead to the illness and impoverishment of local residents and the public at large.

For the past 4 years myself and my peers in the arts have been impacted negatively by Big Tech's push to extract our uncompensated labor (through the unlicensed ingestion and use of our Intellectual Property for the development of Generative AI applications) and have been well aware of Silicon Valley's desire to acquire vital resources the residents of often rural and marginalized communities rely upon in their daily lives- like clean air, water, and electricity, for their datacenters.

Datacenters are harmful in numerous ways, well reported by journalists like Karen Hao (who wrote "Empire of AI", which documents the colonialist nature of AI companies in regards to extracting data and resources from people all over the world. A whole chapter is dedicated to datacenters constructed on native lands) and organizations like More Perfect Union. More Perfect Union's Youtube channel has released numerous videos on the impacts of datacenters, like xAI polluting the air of a town outside of Memphis, Tennessee, and of the incessant light and water pollution attributed to a Meta datacenter in Mansfield, Georgia. More Perfect Union approaches the residents that live near these datacenters and receive firsthand accounts of how these structures have harmed their communities and taught them that their towns' leaders have willfully chosen to put perceived profit over the health and dignity of their people.

I will provide links to their most relevant videos, and urge the members of the GCEDC to view them and listen to the people already being impacted by datacenters.

Below is a list of some of the harms datacenters pose:

Pollution and Environmental Impacts:

-Light pollution: This disrupts nearby communities and harms wildlife, particularly migrating birds and flying insects.

-Noise pollution: The persistent hum of thousands of servers and GPUs (the graphics cards that perform AI training and other functions) and the fans and equipment necessary to cool them create audible high decibel and inaudible low frequency noise that leads to elevated stress in people and animals miles from the datacenters themselves. Persistent high heart rates leads to cardiovascular disease, and other symptoms of exposure to low frequency noise includes insomnia, hearing loss, anxiety, depression, hair

loss, and other ailments. Because low frequency noise also results in vibrations, noise baffling walls and other mitigating measures are often ineffective. Those who live near datacenters say they cannot hope to sell their homes and move away as the noise deters potential buyers.

-Water pollution and depletion: Though many datacenters tout 'closed loop' systems in which fresh, potable water is taken in and evaporated to cool their GPUs, the extraction and evaporation of this water leads to the depletion and sully of nearby water sources. And once evaporated, potable water rarely returns to the water sources they derive from, particularly ground water. Since the majority of datacenters have been built in states experiencing drought (in part due to their extraction) there is no doubt why corporations want to build datacenters along the Great Lakes, which is home to 20% of Earth's fresh water. However, in recent years even the lakes have begun dropping in water level and the region has been receiving less precipitation. Datacenters would exacerbate the hastening of these trends, and as water worldwide becomes more scarce the Great Lakes must be prepared to provide drinking water and agricultural produce as arable land in the United States dwindles.

-Air Pollution: To power their energy intensive functions datacenters often resort to using air polluting methods of generating additional electricity like methane, gas, and coal. Formaldehyde, nitrogen oxides, ozone, and particulates plume over the surrounding region and cause asthma, COPD, heart disease, and inevitably cancer in nearby residents. While STAMP is positioned in such a way that it can run off of hydropower from nearby Niagara Falls, many datacenters are equipped with polluting backups to ensure 24/7 operation in case there is electrical disruption.

-Heat Pollution: Even with various cooling methods, AI datacenters have been found to output so much heat as to raise the temperatures of the areas that surround them. This will negatively impact local ecosystems and, depending on its reach, cause stress to local residents. This will only compound rising temperatures brought on by climate change.

Loss of Tax Revenue, Income, and Jobs for Locals

-Construction Yields few Jobs for Locals: Many datacenters are built with nomadic groups of workers that move from project to project and often hail from far flung states like California and Texas. These workers live in the host city temporarily before moving on, bringing in brief economic boons before leaving a void in their absence. If locals are given work, it will only last as long as the project requires their services, after which point they will be discarded.

-Datacenters Do Not Create Many New Permanent Jobs: After completion, many datacenters are controlled remotely and only need a crews of as little as 3 employees to man their buildings. Compared to the immense amount of power, water, and land they consume, datacenters do not give meaningful employment to local residents. Oftentimes these few workers are contractors from out of state, which effectively takes what few jobs they do offer away from locals.

-Tax Breaks Divert Money from Locals to Out-of-State Multi-Billion Dollar Companies: States and towns have lost hundreds of million dollars via property tax incentives to datacenters that could have been money allocated to local schools, businesses, and other services. Since such deals may stretch for 10 years, the prime operational runtime of a datacenter will be conducted without paying taxes to the local community, after which it may be too late for locals to benefit at all from its presence. And as AI datacenters function for the benefit of corporations like X, Amazon, Alphabet/Google, and Meta- it is allowing wealth extraction from host towns to further enrich companies based in Austin, Seattle, and San

Francisco.

-Pricing Locals and Local Businesses Out: Areas permissive of datacenters have swiftly seen vacant land rise in value to the point where local businesses and farms cannot compete. Rents also rise in areas where datacenters are being built as workers from out of town compete for housing, which leaves locals unable to secure housing for themselves and their families, or they are forced to pay a larger share of what they make to rent.

-Datacenters Will Raise Electricity Bills for Locals: In preparation for datacenters many electricity providers have raised bills by 20%+ percent. Once completed, datacenters will place undue burdens on the grid, causing delivery fees to increase even further. Regular consumers will see the cost to heat their homes, cook, provide light, charge their EV vehicles, and power their devices rise when over 60% of Americans are already living paycheck to paycheck. Datacenters often leech off of existing infrastructure that is not built to support their activities, and the cost of buildouts of new electric infrastructure to accommodate them is invariably placed at the feet of local residents rather than the wealthy companies building the datacenter. It is unfair to place the burden of powering an untested industry and the machines of large corporations onto the backs of local citizens.

-The Purpose of AI is to Replace Human Labor: AI companies are openly marketing their products as a means to replace white collar work, creative professionals, and even teachers, doctors, and lawyers. Studies have found that potentially over 30% of workers' high paying jobs may be diminished or even eliminated in the coming years, with no safeguards or regulations in sight to address this issue. And, as mentioned prior, AI companies created their generative models by appropriating the writing, likenesses, art, photography, and labor of everyone from celebrities to children, and professionals to everyday citizens alike. Their machines are glorified auto-complete that extrudes convincing text, sound, video, and imagery only by exploiting the works of others. AI represents the theft of revenue workers would have demanded for their labor and Intellectual Property that instead is consolidated up into the most monied companies in the world. While the courts deliberate over data privacy and copyright violations, workers are being harmed and displaced. It is possible many local residents will lose their livelihoods to AI, and the datacenter would help facilitate their suffering.

AI Is Not Safe or Sustainable

-AI is Inherently Harmful: AI models, that utilize datacenters for compute, have facilitated crime, abuse, and further exploitation beyond the theft of data. AI has allowed for bad actors to more easily hack and defraud US citizens. AI gives instructions to teens on how to efficiently take their own lives or plan to take the lives of others. AI 'companions' have led to children and adults alike confiding in and socializing with machines over their family and friends. AI has enabled the creation of deepfake pornography and misinformation that puts the faces of everyone from children to public figures into graphic and false footage and imagery. AI has destroyed trust in information online and in newly printed media. AI has infiltrated online communities with bot activity that can sow discord and sway public opinion. AI is being applied to mass surveillance and military applications that have resulted in hundreds of deaths and false arrests. AI use has been linked to cognitive decline, particularly in children and young adults whose brains are still maturing, and lower academic performance. Big Tech companies have little incentive to protect the public from the misuse of its products because it will be years before litigation finds them liable for their crimes and in the meantime they stand to make billions. If the STAMP project is a datacenter that powers and enables AI, it will likely be complicit in these and many other harms.

-AI is Unprofitable and Creating a Speculative Bubble: Generative AI, due to its resource intensive functions, demands incredible costs to run. However, Big Tech favors 'loss leader' tactics to get consumers hooked on 'free' versions of their products at a loss before they begin to demand payment through ads, subscriptions, and token-based purchases. Many AI companies are beginning to charge hundreds of dollars in subscription fees, but are being undercut by free 'open source' models that often 'distilled' other models to create competing products. OpenAI recently shut down its SORA video model and Microsoft and other companies are cutting back investments into AI. Recent reports found that around half of AI datacenter projects have been cancelled or delayed due to AI's unprofitability and uncertainty from investors that it will ever deliver a sustainable business model. In addition, there is uncertainty regarding whether liability for crimes enabled by AI will fall on the corporations that made them, including the copyright and data privacy violations upon which Generative AI is built on top of. It is possible AI corporations will face legal ramifications in the near future that may lead to the dissolution of their businesses entirely, at which point the demand for datacenters will plummet as AI is regulated or banned.

Other Towns, States, Leaders, and everyday citizens are calling for Datacenter Moratoriums and AI Regulation:

Maine is in the process of passing a 2 year moratorium on datacenters. Other states, including New York, have seen proposals to do the same until the impacts of AI and datacenters can be thoroughly studied and their harms understood and mitigated. Like a previously implemented NY moratorium on crypto mining, which similarly utilized GPUs like datacenters, AI datacenters should similarly be postponed. Crypto proved to be an overhyped product by Silicon Valley as the next form of currency that instead resulted in the bankruptcy of numerous adopters, and AI may be no different. Representatives like Bernie Sanders and Alexandria Ocasio-Cortez have proposed a moratorium on AI datacenters as well to protect working people.

Given all of the harms datacenters and AI pose, a moratorium is preferred to following through with a detrimental project that may have to be tolerated, abandoned, or torn down later.

Fundamentally, AI and their datacenters cause incredible environmental, social, health, and economic hardship and destruction for working people. The role of the GCEDC is to promote economic growth and "job creation for the benefit of our residents and children". Allowing a datacenter, particularly one that serves AI companies that readily place profits over the rights and dignity of working people, flies in the face of that mission.

The Tonawanda Seneca have long endured colonialism and witnessed the destruction of their lands and way of life by outsiders. That is in part why it is so important to listen to their voices and that of your residents when they say that powerful tech companies intend to do the same with the towns and cities surrounding the Great Lakes. I implore you to heed their warnings and refuse to build a facility that is designed to exploit and disempower the working class.

Thank you for your time,

Chelle
