Boulter strong. One family. One company. One call.

March 26,2026

Genesee County Economic Development Center Board of Developers:

I am writing to express my [our] support for the proposed STREAM US Data Centers, LLC project at the Science & Technology Advanced Manufacturing Park (STAMP) site in Genesee County.

It is my understanding that STREAM US Data Centers will generate a direct private investment of approximately $19.4 billion. This historic investment in our County/Region will generate significant ancillary benefits for the community at large.

During construction, the project is expected to create over 1,200 jobs for workers in the skilled trades annually over five years of construction. Once fully operational, STREAM will create 125 good paying, family sustaining jobs as well as the creation of indirect jobs with small businesses and contractors across the region.

The project will generate $285 million in revenues for local taxing jurisdictions, including school districts. Further, at full build out, the project will generate approximately $270 million in local sales tax revenue from electricity usage. These revenues will enhance local public services and critical infrastructure, including water systems across Genesee County.

STREAM US Data Centers has committed to being a good corporate citizen and neighbor and has pledged to engage the community throughout the review process and address issues associated with water usage, lighting, and noise.

STREAM US Data Centers is a transformative economic development project and a once in a lifetime opportunity for Genesee County for the betterment of our community for generations to come.

As such, I strongly urge your support of the STREAM US Data Centers, LLC project at STAMP.

Sincerely,

William S. Boulter

UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA

NASRCC - NY

March 31, 2026

Members of the GCEDC,

As a representative of Carpenters Local 276, which serves more than 2,700 members, apprentices, and retirees across twelve counties in Western New York, I write in support of the proposed Stream Data Centers project. From my experience with large-scale construction projects throughout the region, I have seen how well-planned developments can align with local land use objectives while delivering lasting economic and workforce benefits to host communities.

Major projects of this scale offer meaningful opportunities to support local employment and workforce development without placing undue strain on surrounding neighborhoods. On a recent large construction project in Genesee County, the inclusion of local hire provisions enabled Carpenters Local 276 to enroll more than 130 local residents into our apprenticeship program, with more than 200 local residents employed onsite. These efforts provided structured training, long-term career pathways, and a skilled labor force capable of supporting future development in the region.

The proposed Stream Data Centers project is anticipated to be constructed as a prevailing wage project, ensuring family-sustaining wages and comprehensive benefits for participating workers. With construction expected to extend over approximately five years, the project will support sustained local recruitment and training efforts in coordination with area schools, BOCES programs, pre-apprenticeship initiatives, the New York State Department of Labor, CEO, and other workforce development partners. This long-term construction timeline allows for careful coordination with local planning goals and minimizes short-term disruption while maximizing community benefits.

The project will also involve collaboration across multiple union trades, promoting consistent labor standards, workforce readiness, and safe jobsite practices. Such coordination supports an orderly construction process and reinforces compliance with local, state, and environmental requirements that are central to the GCEDC review obligations.

I spoke in favor of this project at the March 19 public hearing and remain fully supportive following the public input process. While I respect differing viewpoints, I believe the Stream Data Centers proposal represents a responsible development that balances economic opportunity with thoughtful planning considerations and long-term community stability.

Thank you for your careful review of this project and for your continued commitment to responsible planning and community-focused development.

Respectfully submitted,

Tom Iorizzo

March 18, 2026

Genesee County Economic Development Center Board of Developers:

I am writing to express my strong support for the proposed STREAM US Data Centers, LLC project at the Science & Technology Advanced Manufacturing Park (STAMP) site in Genesee County, particularly for the significant opportunities it will create for union construction workers and registered apprentices across our region.

It is my understanding that STREAM US Data Centers will generate a direct private investment of approximately $19.4 billion. representing one of the largest economic development investments in the history of Western NY. This unprecedented level of investment presents a transformative opportunity to put highly skilled, union tradespeople to work while delivering lasting economic benefits to Genesee County and the surrounding communities.

During construction, the project is expected to create more than 1,200 construction jobs annually over a five-year construction period, providing stable employment for workers in the skilled trades. These jobs will support family sustaining wages, comprehensive benefits, rigorous safety standards, and high-quality training through registered union apprenticeship programs. Once fully operational, STREAM is expected to create 125 good paying permanent jobs, along with substantial indirect employment opportunities for union contractors, suppliers, and small businesses throughout the region.

The project will also generate approximately $285 million in revenue for local taxing jurisdictions, including school districts. In addition, at full build out, STREAM is projected to generate approximately $270 million in local sales tax revenue from electricity usage. These revenues will strengthen public services and support critical infrastructure investments, including water systems, that benefit working families across Genesee County.

STREAM US Data Centers has committed to being a responsible corporate citizen and community partner. The company has pledged to engage with local stakeholders throughout the review and construction process and to address concerns related to water usage, lighting, noise, and environmental impacts—commitments that align with the values and expectations of the union construction workforce and the communities in which they live and work.

In summary, the STREAM US Data Centers project represents a once-in-a-generation opportunity to create thousands of hours of union construction work, expand apprenticeship and career pathways in the skilled trades, and deliver long-term economic benefits for Genesee County and Western New York.

For these reasons, I strongly urge your approval and support of the STREAM US Data Centers, LLC project at the STAMP site.

Sincerely,

Kimberly J Gaylord

Genesee County Economic Development Center Board of Developers:

I am writing to express my support for the proposed STREAM US DataCenters, LLC project at the Science Technology Advanced Manufacturing Park(STAMP) site in Genesee County.

After reviewing Mr. Mark Masse, President & CEO of the Genesee County Economic Development Center Media Statement posted on March 16, 2026, it is my understanding that STREAM US Data Centers will generate a direct private investment of approximately $19.4 billion. This historic investment in our County/Region will generate significant ancillary benefits for the community at large.

During construction, the project is expected to create over 1,200 jobs for workers in the skilled trades annually over five years of construction.

Once fully operational, STREAM will create 125 good paying jobs in the GLOW region for the students that we train through our local high school BOCES Educational Training and College “Hands-on” Certificate Programs. These are excellent family sustaining jobs as well as the creation of indirect jobs for small businesses and contractors across the region. The project will generate $285 million in revenues for local taxing jurisdictions, including school districts.

Furthermore, at full build out, the project will generate approximately $270 million in local sales tax revenue from electricity usage. These revenues will enhance local public services and critical infrastructure, including water systems across Genesee County.

STREAM US Data Centers has committed to being a good corporate citizen and

neighbor and has pledged to engage in the community throughout the review process and

address issues associated with water usage, lighting, and noise.

Genesee/Finger Lakes
Regional Planning Council

JOHN FITZAK, Chair • JACK MARREN, Vice Chair • NATHAN RUDGERS, Treasurer • RICHARD SUTHERLAND Executive Director

March 13th, 2026

Genesee County Economic Development Center Board of Developers:

On behalf of the Genesee/Finger Lakes Regional Planning Council (G/FLRPC), I am writing to highlight how the proposed STREAM US Data Centers, LLC project at the Science & Technology Advanced Manufacturing Park (STAMP) site in Genesee County aligns with the Genesee/Finger Lakes Region's Comprehensive Economic Development Strategy (CEDS)

It is my understanding that STREAM US Data Centers will generate a direct private investment of approximately $19.4 billion. This historic investment in our County/Region will generate significant ancillary benefits for the community at large. During construction, the project is expected to create over 1,200 jobs for workers in the skilled trades annually over five years of construction. Once fully operational, STREAM will create 125 good paying, family sustaining jobs as well as the creation of indirect jobs with small businesses and contractors across the region.

The project will generate $285 million in revenues for local taxing jurisdictions, including school districts. Further, at full build out, the project will generate approximately $270 million in local sales tax revenue from electricity usage. These revenues will enhance local public services and critical infrastructure, including water systems across Genesee County.

Therefore, this project helps implement multiple goals of G/FLRPC's CEDS. In particular, this project helps the communities achieve: Goal 2: Assist in the Attraction of Industries and Firms to the District and Goal 3: Assist in Improving the Infrastructure of the District. The STAMP site is identified in the CEDS as a strategic industrial park for Genesee county.

Sincerely,

RSutherland

On behalf of Greater Rochester Enterprise (GRE), I am pleased to offer this letter of support for the proposed STREAM US Data Centers, LLC project at the Science & Technology Advanced Manufacturing Park (STAMP) site in Genesee County.

GRE is dedicated to improving the economic performance of the Greater Rochester, NY region. GRE focuses on business growth, attracting new capital investments, creating new jobs, and retaining existing jobs throughout the region. The STREAM US Data Centers proposed project in Genesee County aligns well with GRE's mission.

It is my understanding that STREAM US Data Centers will generate a direct private investment of approximately $19.4 billion. This historic investment in Genesee County will generate significant ancillary benefits throughout the region.

During construction, the project is expected to create more than 1,200 skilled-trade jobs annually over five years. Once fully operational, STREAM will create 125 good-paying, family-sustaining jobs and support indirect jobs for small businesses and contractors across the region.

The project will generate $285 million in revenues for local taxing jurisdictions, including school districts. Additionally, at full build-out, the project will generate approximately $270 million in local sales tax revenue from electricity usage. These revenues will enhance local public services and critical infrastructure, including water systems across Genesee County.

March 20, 2026

Genesee County Economic Development Center Board of Directors:

I am writing to acknowledge the proposed STREAM US Data Centers, LLC project at the Science & Technology Advanced Manufacturing Park (STAMP) site in Genesee County.

It is my understanding that STREAM US Data Centers anticipates a direct private investment of approximately $19.4 billion. This level of investment represents a significant opportunity for economic activity within the County and broader region, with the potential to generate meaningful ancillary benefits for the community.

During construction, the project is expected to engage more than 1,200 skilled trades workers annually over a five-year period. Once operational, STREAM is anticipated to employ approximately 125 individuals in full-time roles, in addition to supporting indirect employment through regional small businesses and contractors.

The project is also projected to generate approximately $285 million in revenue for local taxing jurisdictions, including school districts. At full buildout, it is further expected to produce approximately $270 million in local sales tax revenue associated with electricity usage. These revenues may contribute to the

enhancement of public services and infrastructure, including water systems across Genesee County.

STREAM US Data Centers has indicated its intent to engage with the community throughout the review process and to address considerations related to water usage, lighting, and noise.

Projects of this scale represent a notable opportunity to advance regional economic development objectives, including investment attraction, job creation, and long-term economic growth.

Thank you for your consideration.

RE: Support for STREAM US Data Centers, LLC Project at STAMP

Dear Chairman Zeliff,

I am writing to formally express my strong support for the proposed STREAM US Data Centers, LLC project at the Science & Technology Advanced Manufacturing Park (STAMP). As a partner in regional economic development, I recognize the transformative potential this initiative holds for Genesee County and the Western New York corridor.

The projected $19.4 billion direct private investment represents a historic milestone for our region. Beyond the immediate capital infusion, a project of this magnitude creates a powerful economic multiplier effect, fostering growth and stability that will benefit our communities for generations.

The fiscal implications are equally compelling. The anticipated $285 million in revenue for local taxing jurisdictions and school districts, coupled with $270 million in projected sales tax revenue from energy usage, provides essential relief for residents facing an increasingly high cost of living. These funds represent a vital investment in the infrastructure and education systems that sustain our quality of life.

The GCEDC deserves high commendation for successfully sourcing and structuring a project of this caliber. By leveraging the taxpayer-funded infrastructure at STAMP for its intended industrial purpose, you are ensuring the highest possible return on public investment.

I strongly urge the Board to support the STREAM US Data Centers, LLC project. We look forward to the positive impact this development will undoubtedly have on our shared regional economy.

Sincerely,

William E. Bacon

Dear Genesee County Economic Development Center Board of Developers:

On behalf of Monroe 2-Orleans BOCES, I am writing to express our support for the proposed STREAM US Data Centers, LLC project at the Science & Technology Advanced Manufacturing Park (STAMP) site in Genesee County.

Monroe 2-Orleans BOCES is located in Spencerport, New York, serving the west side of the Greater Rochester region. Through our Career and Technical Education and adult career training programs, we prepare approximately 270 adults and more than 1,000 high school students each year for careers in healthcare, construction, manufacturing, information technology, transportation, and human services.

It is our understanding that STREAM US Data Centers will generate a direct private investment of approximately $19.4 billion. During construction, the project is expected to create over 1,200 skilled trades jobs annually for five years, followed by 125 good-paying, family-sustaining jobs once fully operational. These employment opportunities align directly with the skills and career pathways developed through our workforce training programs and will strengthen the region's skilled talent pipeline.

In addition, the project is projected to generate $285 million in revenues for local taxing jurisdictions, including school districts, along with significant sales tax revenue from electricity usage. These revenues will enhance local public services, infrastructure, and ongoing workforce preparation efforts across the region.

STREAM US Data Centers has committed to being a good corporate citizen and neighbor and has pledged to engage the community throughout the review process and address issues associated with water usage, lighting, and noise.

STREAM US Data Centers is a transformative economic development project and a once in a lifetime opportunity for Genesee County for the betterment of our community for generations to come.

As such, Monroe 2-Orleans BOCES strongly urges your support of the STREAM US Data Centers, LLC project at STAMP.

Sincerely,

Economic Development &
Innovative Workforce Services
MONROE COMMUNITY COLLEGE

Robin Cole Jr., D.Sc.
Vice President, Economic & Workforce Development

Mark A. Masse, CPA
President and CEO
Genesee County Economic Development Center
99 MedTech Drive, Suite 106
Batavia, NY 14020

Dear Mr. Masse:

I am writing to express my support for the proposed STREAM US Data Centers, LLC project at the Science & Technology Advanced Manufacturing Park (STAMP) site in Genesee County.

It is my understanding that STREAM US Data Centers will generate a direct private investment of approximately $19.4 billion. This historic investment in the greater Genesee region will generate significant ancillary benefits for the community at large.

During construction, the project is expected to create over 1,200 jobs for workers in the skilled trades annually over five years of construction. Once fully operational, STREAM will create 125 good paying, family sustaining jobs as well as the creation of indirect jobs with small businesses and contractors across the region.

The project will generate $285 million in revenues for local taxing jurisdictions, including school districts. Further, at full build out, the project will generate approximately $270 million in local sales tax revenue from electricity usage. These revenues will enhance local public services and critical infrastructure, including water systems across Genesee County. While it positively impacts Genesee County directly, we see it as a win for neighboring counties and new opportunities for everyone.

I also understand that STREAM US Data Centers has committed to being a good corporate citizen and neighbor and has pledged to engage the community throughout the review process and address issues associated with water usage, lighting, and noise.

STREAM US Data Centers is a transformative economic development project and a once in a lifetime opportunity for our area that will benefit the greater community for generations to come. As such, I strongly support the STREAM US Data Centers, LLC project at STAMP.

Sincerely,

Scott A. Gardner
President & CEO

Genesee County Economic Development Center
Attn: Board of Directors
99 Medtech Drive
Batavia, NY 14020

Dear Board of Directors:

On behalf of the International Brotherhood of Electrical Workers (IBEW) Local 41, I am writing to express our strong support for the proposed STREAM US Data Centers, LLC project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic private investment of approximately $19.4 billion in our region—an unprecedented opportunity that will deliver lasting economic benefits to our communities. The scale of this investment will not only strengthen the local economy but also generate meaningful, long-term opportunities for working families throughout Western New York.

From a workforce perspective, the STREAM project is especially significant. During construction, it is expected to create more than 1,200 jobs annually for skilled trades workers over a five-year period. These are exactly the kinds of high-quality, family-sustaining careers that IBEW Local 41 members are trained and ready to perform. Upon completion, the facility will provide 125 permanent, good-paying jobs, while also providing additional jobs through small local businesses and contractors across the region.

Beyond job creation, the financial impact to the community is substantial. The project is projected to generate approximately $285 million in revenue for local taxing jurisdictions, including school districts. Additionally, at full build-out, it is expected to produce roughly $270 million in local sales tax revenue from electricity usage. These funds will play a critical role in strengthening public services and improving essential infrastructure, including water systems throughout Genesee County.

Equally important, STREAM US Data Centers has demonstrated a commitment to being a responsible corporate partner. Their pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects an understanding of the importance of transparency and collaboration.

In our view, this project is a transformative economic development opportunity—one that comes along perhaps once in a generation. It has the potential to deliver lasting benefits for workers, families, and the broader community for decades to come.

For these reasons, IBEW Local 41 strongly urges the Board to support the STREAM US Data Centers, LLC project at STAMP.

Sincerely,

Gregory R. Inglut
Business Manager/Financial Secretary

Dear Members of the Genesee County Economic Development Center,

I am writing to share my concerns regarding the proposed data center project at the STAMP site. While economic growth is important, the scale and long-term impacts of this project raise serious questions.

The amount of energy required, the relatively small number of permanent jobs, and the level of public subsidies involved do not appear to provide a balanced benefit to the community. In addition, potential environmental effects and infrastructure demands should be more thoroughly evaluated.

I respectfully ask that you take a cautious approach by pausing further approvals until a comprehensive and transparent review is completed, with full opportunity for public input.

Thank you for your consideration.

Sincerely,
Brittany Deschler

Dear Members of the Genesee County Economic Development Center,

I am writing to express my opposition to the proposed data center project at the STAMP site in Genesee County. While I understand the goal of economic development, this project raises serious concerns about its overall impact on our community.

The scale of energy consumption, the limited number of long-term jobs, and the significant taxpayer subsidies make this project difficult to justify. Additionally, the potential environmental impacts and strain on local infrastructure deserve careful and transparent review.

I respectfully urge you to pause or reconsider approval of this project and ensure a full, independent environmental review with meaningful public input.

Thank you for your time and consideration.

Sincerely,
Kya Rapone

I oppose the massive data center complex at STAMP in the Town of Alabama.

In a March 2026 report from Good Jobs First, a non-profit, non-partisan research organization on economic development incentives, it was determined that "...this is a direct transfer of wealth from every resident of Genesee County to Apollo Global Management, one of the world's biggest private equity firms...This is not an industry that requires public financial support to do their private business."

In addition, this center will negatively impact our GLOW region due to:

- Air pollution
- Water pollution
- Harmful impacts to wildlife & local sportfishing industry
- Higher electricity rates
- Increased brownouts & blackouts
- 24/7 light
- 24/7 low frequency noise and attendant health and environmental problems
- Lower property values
- Loss of biodiverse wetlands and productive farmland
- Lack of respect for the neighboring Tonawanda Seneca Nation's lands & traditions

...all for a few local jobs. Profits will benefit the speculative multi-billion data center industry and an undisclosed Big Tech operator.

Mr. Masse

I oppose the massive data center complex at STAMP in the Town of Alabama.

In a March 2026 report from Good Jobs First, a non-profit, non-partisan research organization on economic development incentives, it was determined that "...this is a direct transfer of wealth from every resident of Genesee County to Apollo Global Management, one of the world's biggest private equity firms...This is not an industry that requires public financial support to do their private business."

In addition, this center will negatively impact our GLOW region due to:

- Air pollution
- Water pollution
- Harmful impacts to wildlife & local sportfishing industry
- Higher electricity rates
- Increased brownouts & blackouts
- 24/7 light
- 24/7 low frequency noise and attendant health and environmental problems
- Lower property values
- Loss of biodiverse wetlands and productive farmland
- Lack of respect for the neighboring Tonawanda Seneca Nation's lands & traditions

...all for a few local jobs. Profits will benefit the speculative multi-billion data center industry and an undisclosed Big Tech operator.

Anne Huenemoerder, Pavilion, N.Y. 14525

ROCHESTER NY 144
11 APR 2026 PM 1 L

To Mr. Masse,
I do not want the Data Center to be built in Alabama, NY. Building this center would damage the environment and adversely impact the people and wildlife living in and near Alabama, NY.

Sincerely,
Beverly Hisey
Batavia, NY

- Lack of respect for the neighboring Tonawanda Seneca Nation's lands & traditions

...all for a few local jobs. Profits will benefit the speculative multi-billion data center industry and an undisclosed Big Tech operator.

Bad Deal

Chandy -

I oppose the massive data center complex at STAMP in the Town of Alabama.

In a March 2026 report from Good Jobs First, a non-profit, non-partisan research organization on economic development incentives, it was determined that "...this is a direct transfer of wealth from every resident of Genesee County to Apollo Global Management, one of the world's biggest private equity firms...This is not an industry that requires public financial support to do their private business."

In addition, this center will negatively impact our GLOW region due to:

- Air pollution
- Water pollution
- Harmful impacts to wildlife & local sportfishing industry
- Higher electricity rates
- Increased brownouts & blackouts
- 24/7 light
- 24/7 low frequency noise and attendant health and environmental problems
- Lower property values
- Loss of biodiverse wetlands and productive farmland
- Lack of respect for the neighboring Tonawanda Seneca Nation's lands & traditions

...all for a few local jobs. Profits will benefit the speculative multi-billion data center industry and an undisclosed Big Tech operator.

Sent: Tuesday, March 31, 2026 9:49 PM
To: streampublichearing@gcedc.com; Press.RSVP@exec.ny.gov
Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

People over AI!

Sincerely,

Olivia Kormos

Sent: Tuesday, March 31, 2026 9:42 PM
To: streampublichearing@gcedc.com
Subject: Public Comment submitted for BUFA Project Double Reed

To the Genesee County Economic Development Center (GCEDC):

My name is Molly Ornati, Legislation Lead of 350Brooklyn. Our organization, 350Brooklyn was founded more than 10 years ago and our mission is to counter the climate crisis and environmental degradation through local action. To work toward a world that is just, equitable and sustainable and where all beings can thrive.

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

Our organization is committed to the just implementation of the Climate Leadership and Community Protection Act. We are also committed to defending the sovereignty of Indigenous people who have suffered centuries of violence, neglect and absue. The proposed data center lies within a Disadvantaged Community, as designated by the Climate Justice Working Group, which subjects this project to review under the CLCPA. Per Section 7(3) of the law, in considering and issuing permits, licenses, and other administrative approvals and decisions, all state agencies, offices, authorities, and divisions shall not disproportionately burden Disadvantaged Communities. Given the threats posed by this project to the Tonawanda Seneca Nation which lies within this Disadvantaged Community, and our overarching respect for Indigenous sovereignty, we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of NYS Department of Environmental Conservations' recommendations with respect to the SEQR environmental review process, and call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts;

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public; and

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of

the Tonawanda Seneca Nation. It also threatens our Climate Law and violates the sovereignty and way of life of the Tonawanda Seneca Nation.

In closing: we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of DEC's recommendations with respect to the SEQR environmental review process, and call on GCEDC to reject the incentives application from STREAM US Data Centers. It is important for the government to listen to the voice of the people of this state, who do not want another act of violence and abuse to be committed in their name.

Sincerely,
Molly Ornati
Legislation Lead
350Brooklyn

From: Hillery Dennies <hillerydennies@gmail.com>
Sent: Tuesday, March 31, 2026 9:05 PM
To: streampublichearing@gcedc.com
Subject: Comment Submission to the GCEDC Board of Directors
Attachments: HDenniescommentsreferences.docx; eagles_alabama.jpg

To the GCEDC Board of Directors,

My name is Hillery Dennies. My husband, Michael Dennies, and I live on Bloomingdale Road in the Town of Alabama. We have been residents of the community since the summer of 2019 and we are OPPOSED to the construction and operation of the proposed STREAM AI-Data center.

I first became aware of the STAMP project after moving to the area. In fact, this project initially piqued the interest of both my husband and I because of our careers related to the STEM fields. This is why I began my research on the 1,250-acre mega-site, to see what kind of job opportunities might be waiting for either of us there. A quick Google search on the STAMP project led me to its mission statement – "…to create thousands of jobs, approximately 9,000 jobs, related to the semiconductor, green energy, and biopharma manufacturing industries." ("STAMP Site Genesee County - New York State Economic Development Council"). These 9,000+ jobs would help boost the regional economy, all while utilizing low-cost hydropower ("STAMP Site Genesee County - New York State Economic Development Council"). Yet my optimism for the project quickly diminished as I continued my research and began to uncover the harsh realities of what was promised by the GCEDC and what has actually happened since it was conceptualized of the STAMP property in 2004 ("STAMP Site Genesee County - New York State Economic Development Council").

When the STAMP project was first proposed, the GCEDC claimed it would generate more than 9,000 jobs at full buildout ("STAMP Site Genesee County - New York State Economic Development Council"). Nearly 20 years later, that promise has fallen far short. As of 2026, the park has only two tenants - Edwards Vacuum and Plug Power ("STAMP Site Genesee County - New York State Economic Development Council"). Plug Power initially added just 68 jobs, while Edwards Vacuum is projected to bring between 280 and 350 permanent positions ("Governor Hochul Announces Construction Start at Largest Green Hydrogen Plant in North America | Governor Kathy Hochul"). These numbers are nowhere near the original projections. So naturally, there's hope that the proposed STREAM AI data center might finally deliver meaningful job growth for the region, right!?...

Wrong!!

The STREAM project would develop roughly 130 acres into a massive campus spanning 2.2 million square feet across three two-story buildings ("Stream Ups Planned Investment in New York Campus to $19.46 Billion"). Yet despite its enormous footprint, it is expected to create a measly 120 jobs?! Not only does this represent a significant loss of habitat for a minimal number of jobs, but it also calls into question the justification for the $744 million in taxpayer subsidies STREAM wants. So, if this project is approved, that means taxpayers would be contributing more than $6 million per job created to the data center (Rockwell). The average projected

yearly salary for these jobs was approx. $88,000 and this was presented by the GCEDC on the night of the public hearing hosted March 19th,2026 at the Alabama Fire Hall.

It doesn't take a genius to see the imbalance here. Job projections tied to these developments appear increasingly inflated, while the economic return to the community remains limited. In addition, more recent reports further indicate that while site infrastructure is advanced, operational jobs have lagged behind original long-term projections (Shoemaker).

On top of the questionable job projections, tax subsidies, and the large environmental footprint this data center would create, community members have raised reasonable concerns about increasing utility costs due to the high demand required to power these facilities. "Data centers increase local electric utility rates by driving up overall energy demand" (Nguyen). In fact, "one study from the Lawrence Berkeley National Laboratory found that data centers could represent up to 12% of all U.S. electricity consumption by 2028" (Walker and Goldsmith). The consulting firm McKinsey & Company estimates that power demand for data centers will reach 1,400 terawatt-hours by 2030, equivalent to 4 percent of total global power demand (Sachdeva et al). "To deliver the required data center infrastructure, the United States alone will need to more than triple its annual power capacity over the next five years—from 25 GW of demand in 2024 to more than 80 GW in 2030," according to McKinsey. Another analysis, by Grid Strategies, says that up to 90 gigawatts worth of data centers could come online by 2030—that's about nine times New York City's peak summer demand joining the grid in less than five years (Walker and Goldsmith).

The ugly truth is that most of these costs are not passed on to the data centers or corporations themselves. Instead, they are passed on to residents through higher rates. "Data centers avoid these costs by securing long-term power agreements, which reduce the available supply and push prices up for other consumers" (Nguyen). So, unless NYS decides to introduce a new rate schedule for data centers, like the utility AEP in Ohio, where they are "…requiring them (data centers) to pay for at least 85% of the energy they are subscribed for, regardless of how much they actually use"- how are households and other businesses not expected to see rate increases (Walker and Goldsmith)? Plus, residents of Genesee County and across Western New York are already seeing major increases in their electric bills as NYS scrambles to update its 60+ year-old infrastructure.

The last point I'd like to address is my concern over the strain this data center may place on our local emergency response crews, who are already stretched thin. Data centers across the United States are massive, specialized facilities with many complicated risks and hazards. Identifying and mitigating these risks requires a significant amount of planning, training, and ongoing coordination just to protect their staff, first responders, and the surrounding community. Nothing about these facilities is straightforward or "cookie-cutter" when it comes to emergency response planning or the development of environmental, health, and safety SOPs. As new technologies evolve faster than existing safety codes, safety professionals across the country are struggling to keep up ("The AI Data Center Boom and Race to Manage the Safety Risks.").

Those professionals not only include authorities with jurisdiction, like the GCEDC, engineers, electricians, pipe fitters, and code officials, but also the emergency response crews who will ultimately be called during an emergency "The AI Data Center Boom and Race to Manage the Safety Risks."). And increasingly, what can go wrong is becoming more complex. The technology inside these facilities is advancing so quickly that sometimes, companies will halt construction plans mid-project just to redesign systems around new

innovations (Nguyen). For emergency responders, that means they must constantly adapt to entirely new layouts, newly identified hazards and risks, as well as response protocols. This is well before they've even fully understood the original plan.

As power demands increase, many of these facilities are also incorporating on-site energy generation, including large-scale power plants and, potentially, small modular reactors (SMRs) ("The AI Data Center Boom and Race to Manage the Safety Risks."). Each addition introduces more risks and complexities for emergency response crews. This could include fires involving high-density lithium-ion batteries, electrical hazards, chemical exposures, and even radiological concerns. All very concerning hazards that must be fully understood prior to local first responders pulling up to these facilities.

But what does this mean for a small, rural community like the Town of Alabama?

Both my husband and I have spent over a decade working as environmental health and safety professionals, and nearly ten years serving as volunteer firefighters and hazmat technicians in both the Town of Clarence and the Village of Akron. We have seen firsthand the realities WNY emergency services are facing like demanding training requirements, increase in call volumes, heavy time commitments, and an aging population. EMS crews in particular are often the most strained, who must cover large areas with minimal personnel, all while balancing full-time jobs and their own family responsibilities. An example we see in our news regularly related to the strain EMS crews are facing is in relation to Twin-City Ambulance. Even though they are paid, they regularly make headlines regarding budget cuts and their lack of staffing.

New York State's volunteer fire service is already in decline, with firefighter numbers at their lowest level in nearly 40 years (Bourtis). Many departments struggle to meet even basic staffing needs, let alone take on the additional burden of preparing for and responding to high-risk facilities like this AI data center. We can't solely blame this on the lack of man-power either, it is a training, funding, and sustainability issue too!

In a larger city, there may be full-time, specialized units equipped to handle these types of incidents. In the Town of Alabama and City of Batavia, that responsibility will fall on them, including the volunteers, who are already operating at their limits. Therefore, when a major incident occurs at a facility like this, it will not just impact the site itself, it will pull critical emergency resources away from the rest of the community. We will be calling out to a number of departments across Western New York for mutual aid assistance. That means fewer ambulances available for medical emergencies, longer wait times for mutual aid, and increased risk for residents who rely on timely response in life-threatening situations.

I do not believe the GCEDC has considered this reality. They are simply ignoring the central question, not whether this community can host a facility like this, but whether our current emergency response teams, as they exist today, actually can!

I want to say how disappointed I am in the carelessness and lack of cooperation made by the board in addressing this communities' concerns. They appear to not only ignore the residents of the Town of Alabama's pleads, but the Tonawanda Seneca Nation's too. Honestly, the Seneca Nation simply saying – "they do not want this in their backyard", should be enough to put a stop to this project. We have trampled on and hurt the native communities for hundreds of years, and here we are again, continuing to violate sovereign land rights. I urge you all to consider the very negative ethical, moral, economic, and environmental impacts the STREAM

AI-Data center will have on ALL OF US for many generations to come, which will surpass the technology it very well houses.

Attached are my references.

Thank you,

Hillery Dennies

Resident to the town of Alabama

** In my comments, I have attached a photo taken by my husband, Michael Dennies, of a bald eagle and two golden eagles. These pictures were taken near our home on Bloomingdale Road, between the Village of Akron and the Town of Alabama. I hope that when you look at the photo, you'll be awe stricken and perhaps you'll take a step back, then think deeply on how an AI data center would negatively impact their vast habitat.

Subject: Data Center

Hello,

I am writing to voice my thoughts on the proposal to build a data center in Genesee County. I am deeply opposed to this. The amount of pollution, the threat to wildlife, and the general decline of quality of life in the surrounding area that would accompany this build is unjustifiable.

Do not do this. No one wants it.

Best,
Sarah Watkins

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

New York must not act in ways that set additional harms on the lives and wellbeing of our indigenous neighbors. The utmost respect and consideration must be given toward UNDOING past wrongs and NOT creating new. The potential impact on the Tonawanda Seneca Nation must ve the priority in consideration of any changes to their local region. We, as a state as well as nation, must continually strive to lift up our Native sisters and brothers.

Sincerely,

Marsha Reed

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

No data centers, please! I oppose the STAMP data center in New York State because it would massively increase electricity costs for residents by consuming up to 500 megawatts—enough to power around 400,000 households—while requiring billions in taxpayer subsidies. Additionally, it threatens local quality of life with constant noise pollution, air pollution, water resource strain, and harm to the nearby Tonawanda Seneca Nation's sovereignty and environment.

Sincerely,

Ramana Callan

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I am glad that GCEDC plans to hold a supplemental public hearing on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has extended the written comment period. Additionally, I demand:

- The Board of Directors must be present at this hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal; and
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;

This in regard to the next public hearing. Many people were not able to get into the building for the initial hearing due to the large crowd. I know Alabama has a secondary room they use for bingo, could you open that up for additional seating? Or is this space not large enough to accommodate the public? From the first meeting, you now have a good perspective of what the turn out could be. The "live stream" was not stable, people waiting from home were not able to hear and it was really lagging. I know some people got frustrated and came to the firehall and then could not get in the door. It would also be beneficial to have planning board members & GCEDC board members present at the hearing.

Sincerely,

Megan Logan

Once the Supplemental Public Hearing is rescheduled it needs to be held in a space that can accommodate the full spectrum of participants. The board of directors of the GCEDC should be required to be in attendance at the public hearing. There should be two stenographers present who can shift each other so one person doesn't have to put undue strain on their hands during the hearing.

Sincerely,

Liz Thompson

Subject: Public Comment
Attachments: Orleans County Sportfishing Coordinator Statement on STAMP Project 3 31 2026.pdf

Please see attached and below. Thanks!

County of Orleans
Department of Tourism
14016 Route 31 West • Albion, NY 14411
Phone: (585) 589-3102 • Fax: (585) 589-3283

The Oak Orchard River and the receiving waters of Lake Ontario are a World-Class year-round fishing destination. According to a 2017 NYSDEC study, the total annual economic impact from visitors coming to fish in Orleans County waters was nearly 28 million dollars. Applying a standard inflationary rate that value would be near 34 million in 2024.

The tributary waters of Oak Orchard River are one of the major use tributaries in Lake Ontario that have prolific trout and salmon migrations supported by substantial stakeholder stocking efforts and some natural reproduction. The downstream waters of Lake Ontario at Point Breeze, NY are enjoyed by thousands of recreational boaters and trolling anglers alike.

The good health and non-impacted clean water of the Oak Orchard River is vitally important to the sport fishery and boating interests which support the tourism economy for Orleans County.

Concerns for any STAMP site sanitary or process wastewater discharge into Oak Orchard River at any location include increased volumes that could impact existing run of the river flows, most especially the NYS Canal Corp and NY Power Authority's Reimagine the Canals Fall Fishing Program and degradation of water quality from sanitary effluent or harmful chemical process wastewater constituents.

With unknown future and ever-changing STAMP site tenants to include the proposed hyperscale STREAM US Data Center it is nearly impossible to quantify what could be the makeup of the STAMP site wastewater effluent going forward.

Discharge into a high gradient section of Oak Orchard River downstream of swamp and Refuge waters at
Shelby, NY via a force main moving STAMP wastewaters across County lines was and remains an ill-advised
option – especially considering the crossing of the Oak Orchard River twice before the eventual Shelby
discharge point. And - discharge into low gradient upstream headwaters of Oak Orchard River upstream of
swamp and Refuge waters at Oakfield, NY via a different force main or by tanker truck transport for STAMP
wastewaters is no better an option and cannot be supported.

A responsible siting and development of the STAMP site and future tenant buildout should include reasonable
water intake and use with the treatment and discharge of wastewaters done on site or within originating county
boundaries – and not to include the Oak Orchard River.

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Data centers are not what we need - we need solar and wind farms, battery energy storage systems, clean water and clean air that will help our kids thrive.

Sincerely,

Sarah Maine

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Do not allow this data center to be built! it threatens the way of life of the people who live there who have not consented to this polluting, nasty, eye sore on their land. This is benefitting no one but a small portion of billionaires. Stop killing the planet and the people creating beauty!

Sincerely,

Amanda Goodman

Grandmothers Council of Niagara

March 31, 2026

TO: Mark Masse and GCEDC Board

FROM: Grandmothers Council of Niagara

RE: Comments on Data Center Proposal

Submitted by STREAM US Data Centers and Apollo Global Management

The Grandmothers Council of Niagara's work is to protect life on Earth. We ask of all actions and practice today: Will this action ensure that future generations will have a thriving and beautiful planet as a home? Earth has been bequeathed to us by our ancestors, and it is our task to see that it continues for our children and their children. Although we are concerned with the entire planet, our home is Western New York, a rich and fertile place with bountiful waters, rich lands, productive ecologies and diverse communities of people. We are responding to the proposed data center at STAMP and the issue of incentives from this perspective.

The STAMP project, the Scientific and Technology Advanced Manufacturing Park, established in 2012 by the Genesee County Economic Development Center on 1250 acres near Alabama, New York, was a mistake. Over 20 years it has not established a single business at this "strategic location" in the middle of agricultural and natural protected areas adjacent to the Tonawanda Seneca Nation. Clearly, this is not a good site for advanced manufacturing, and neither is it appropriate for a massive speculative data center.

We could repeat the arguments on the incongruities of these uses at this location but will not. You have heard them and obviously dismissed them as unimportant for the community in which you live. But we ask, by what right do you believe you should be able to radically alter the lifespace of so many others – people and non-humans? You have squandered millions of dollars in this effort, state and federal, taxpayer funds. Given the proposed projects disregard for the community, the scale of intervention, its harm to the adjacent lands of the Tonawanda Seneca Nation, and its interruption of the ecological process of the wetland complex, we strongly oppose the imposition of a data center or advanced manufacturing at the site.

As a wise man once said, "When you find yourself in a hole, stop digging."

We also urge you to disband the Genesee County Economic Development Center. It is supposed to provide economic support for this community, but your 'client' does not reside in Genesee County and the community's interests have not been your concern. It would be better for the region if you cease to exist or perhaps take on the responsibility to ReThink STAMP so that what happens on that land builds on the local economy and promotes the well-being of all the residents.

Sincerely,

streampublichearing@gcedc.com

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

As a social worker in the state of NY, part of caring for our citizens is caring for our environment. There is extensive data around the harmful effects of data centers on water supplies and surrounding environments. This is not a business issue, this is a human issue, one that gets to the heart of what makes NYS great. Don't allow data centers from outside actions to interfere with this!

Sincerely,

Victoria Crawford

From: Anandi Somasundaram <anandi@rjicoalition.org>
Sent: Tuesday, March 31, 2026 5:04 PM
To: streampublichearing@gcedc.com
Subject: Re. STAMP Data Center - Public Comment Period Submission

To the Genesee County Economic Development Center (GCEDC):

My name is Anandi Somasundaram, Program Director at the Racial Justice Investing Coalition. RJI is a non-proprietary coalition of over 450 investors, asset owners, and business leaders who take action towards racial and social justice through seeking to ensure that impacts to people and planet are accounted for in corporations' products, services and practices.

We submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

Our organization is committed to the just implementation of the Climate Leadership and Community Protection Act. The proposed data center lies within a Disadvantaged Community, as designated by the Climate Justice Working Group, which subjects this project to review under the CLCPA. Per Section 7(3) of the law, in considering and issuing permits, licenses, and other administrative approvals and decisions, all state agencies, offices, authorities, and divisions shall not disproportionately burden Disadvantaged Communities. Given the threats posed by this project to the Tonawanda Seneca Nation which lies within this Disadvantaged Community, and our overarching respect for Indigenous sovereignty, we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of NYS Department of Environmental Conservations' recommendations with respect to the SEQR environmental review process, and call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts;

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public; and

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation. It also threatens our Climate Law and violates the sovereignty and way of life of the Tonawanda Seneca Nation.

In closing: we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of DEC's recommendations with respect to the SEQR environmental review process, and call on GCEDC to reject the incentives application from STREAM US Data Centers.

Sincerely,

Anandi Somasundaram (all pronouns)

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I am glad that GCEDC plans to hold a supplemental public hearing on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has extended the written comment period. Additionally, I demand:

- The Board of Directors must be present at this hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal; and
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;

STOP THE DATA CENTER. why the tax incentives? Listen to your people!

Sincerely,

M W Sickler

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Subject:	Supplemental SEQR Comments for STAMP Project Double Reed
Attachments:	2026-03-31 STAMP Project Double Reed Supplemental SEQR Comments.pdf

Good afternoon Mark,

Thank you for the extension to April 10, 2026, to provide SEQR comments. For now, please see attached for the Department's supplemental SEQR comments for Project Double Reed. If the Department has additional comments as an involved agency, we will work to provide them to you by April 10, 2026.

Thank you,

Ashley Kasperowicz *(she/her/hers)*

RE: STAMP – Project Double Reed SEQR Correspondence Supplement

Dear Mr. Masse:

This letter supplements the New York State Department of Environmental Conservation's ("Department") January 28, 2026, SEQR lead agency coordination and comment letter for Project Double Reed. With Stream Data Centers' submission of an air state facility (ASF) permit application on March 30, 2026, the Department is an involved agency pursuant to 6 NYCRR 617.2(t). The SEQR comments below are in addition to those in the Department's correspondence of January 28, 2026, and are based on the following documents listed on GCEDC's website:

- Response to Project Application Response Request – February 18, 2026 – Cover Letter – Responses
- SEQR Update Memo – February 27, 2026

Additional comments related to the above-referenced documents and previous documentation submitted for this project, which may be required for the Department to make findings, may be forthcoming now that the Department has been confirmed to be an involved agency.

Project Description

The Project Description should include all aspects of the project, including the proposed 40-acre laydown area.

The updated Project Description indicates that the project optimizes the placement of generators on the site to maximize distance from sensitive receptors; however, the generators for the north campus appear to be proposed for the northern ends of the data center buildings, which are closer to the nearest off-site receptors.

Acoustics Technical Summary

The Acoustics Technical Summary should address the short-term construction noise as well as the long-term facility operation noise, including an analysis of both daytime and nighttime operations and existing ambient noise levels. In addition, the noise analysis should include an assessment of noise impacts when all backup generators are in use, and an assessment of noise impacts from any proposed periodic testing of backup generators while the facility is fully operating.

The Acoustics Technical Summary Noise Modeling Results indicate that the rooftop noise screens were assumed to be solid and containing sufficient density to prevent noise transmission through the barrier, but that the specific details of the rooftop screen may change as the design progresses. If the actual final design of the rooftop screens will not contain sufficient density to prevent noise transmission through the barrier, or the design changes in such a way as to render the barriers less effective at blocking noise from the rooftop chillers or the generator yards, the noise analysis should be revisited to evaluate noise impacts on nearby receptors.

The noise analysis should also consider the effects of noise on wildlife.[1]

In addition, the specific details of the noise analysis to be contained in the Initial Assessment (IA) for Project Double Reed may need to go into greater detail than has been provided in the revised SEQR materials to facilitate adequate review by the Department, the Nation, and the Office of Parks, Recreation, and Historic Preservation. One such example would be taking ambient noise measurements from around the project area and comparing the projected noise levels from Project Double Reed to current ambient levels.

Visual Impact Analysis Technical Summary

The visual simulations provided are small, of low image resolution, only show one, post-construction image for each viewpoint, and do not include any analysis or evaluation of potential impacts. The simulations also appear to be entirely computer-generated, instead of created based on a photograph of existing conditions at a key viewpoint; existing conditions should not be simulated. To effectively analyze visual change, the Department recommends following Department Program Policy DEP-00-2 Assessing and Mitigating Visual and Aesthetic Impacts[2] and industry standards,[3] including starting from a photograph of existing conditions and separately simulating the facility post-construction and with screening (if applicable). This allows for an analysis of the change and effectiveness of proposed mitigation.

[2] https://extapps.dec.ny.gov/docs/permits_ej_operations_pdf/visualpolicydep002.pdf
[3] https://blmwyomingvisual.anl.gov/docs/PhotoSimulation_Review_Guide_ASLA.pdf

Please expand the Visual Impact Analysis Technical Summary to include an analysis of each viewpoint comparing existing conditions with the post-construction appearance of the facility. In addition, please provide additional visual simulations assessing visual impacts from the western border of the STAMP site where it meets the Tonawanda Seneca Nation's Territory.

Disadvantaged Communities Burden Assessment

Section 4.0 Disadvantaged Communities Burden Analysis

Per the SEQR-related provisions of the Environmental Justice Siting Law (EJSL) (Chapter 840 of the Laws of 2022, as amended by Chapter 49 of the Laws of 2023), agencies reviewing actions under SEQR are required to evaluate whether an action may cause or increase a disproportionate pollution burden on a disadvantaged community (DAC) as part of the SEQR process.

On January 29, 2025, DEC published a notice of proposed rulemaking related to those provisions, including draft express terms, draft model environmental assessment forms, and draft SEQR workbook guidance. While the regulations are not effective until they are adopted, agencies may implement the new law by using the draft materials. Agencies may also use other information sources and methods. Additional information, including draft guidance, can be found on DEC's website at the following links: The Environmental Justice Siting Law[4] and Proposed Amendments to 6 NYCRR Part 617.[5]

The Department recommends using the draft SEQR workbook guidance[6] to provide additional information in the Disadvantaged Communities Burden Analysis (DCBA) related to the project's impact on census tracts 36037950300 and 36037940100. Such additional information should include:

- A discussion of all relevant potential impacts regarding pollution burdens that may occur within the DACs, including a discussion of the relevant indicators for Census Tract 36037950300 such as health outcomes and sensitivities and percent Native American/Indigenous in order to guide the analysis;
- Address issues and considerations identified using the Full Environmental Assessment Form (FEAF), see the draft SEQR workbook for additional information and guidance;
- Address input from citizens of the Tonawanda Seneca Nation territory and census tract 36037950300 regarding how the communities may already be impacted by existing pollution burdens and health stressors;
- An updated narrative of Section 4.0 and Section 6.0 to address letters from the Nation, affidavits, and other communications describing the social,

[4] https://dec.ny.gov/environmental-protection/environmental-justice/the-environmental-justice-siting-law
[5] https://dec.ny.gov/regulatory/regulations/proposed-emergency-recently-adopted-regulations/state-environmental-quality-review-act-regulatory-revisions
[6] https://dec.ny.gov/sites/default/files/2025-01/part617risguidanceappc.pdf

environmental, and cultural concerns expressed by the Nation and Nation members;

- As an example, the Nation has repeatedly stated its concerns about how the construction and operational impacts of the project, such as noise, visual, and hydrology, will impact natural resources and the ability of Nation members to safely continue traditional cultural practices on their territory. The DCBA should include a response to these concerns.

The DCBA and its content should be focused on the identification, description and assessment of potential impacts on DACs from Project Double Reed to help guide the Lead Agency's SEQR assessment and decisions.

Section 4.0 of the updated DCBA also indicates that the facility will "require both a construction SPDES permit and an industrial SPDES permit to support construction activities and long-term site operations." Based on the available information, it is unclear to the Department what is meant by an industrial SPDES permit in this context. Please provide clarification as to what type of industrial SPDES permit is anticipated to be required and for which activities it will be required.

General Comments

The updated DCBA indicates that the facility will use approximately 20,000 gallons per day of water/wastewater; however, the updated Part 1 FEAF indicates that only 12,500 gallons per day of sanitary wastewater will be generated. This leaves 7,500 gallons per day of uncharacterized and unaccounted wastewater. As noted in the Department's January 28, 2026, SEQR Lead Agency Coordination Letter, if wastewater is generated from cooling, air conditioning, or similar purposes, it would be considered an industrial discharge. If this water is discharged directly from the project site, an individual SPDES permit application will be required.

Please feel free to contact this office for further information or discussion.

Sincerely,

Ashley Kasperowicz

To: streampublichearing@gcedc.com; Press.RSVP@exec.ny.gov
Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Our electric grids are not ready to sustain all that AI computers demand. I would also urge a moratorium on advancing AI until experts offer moral and ethical reviews. Progress is beneficial when it is prudent.

Sincerely,

streampublichearing@gcedc.com

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Alabama is beautiful. We canoe and kayak there all the time. The animals and wildlife will be disrupted indefinitely if their water supply and environment is destroyed by a data center NO ONE wants near them. It will cause utility bills to increase, be ugly, and hurt wildlife.

Sincerely,

Annastasia Flannery

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Our environment already is severely compromised, and this Data Center would compromise it even more. Its impact would have a rippling effect of destruction to the land, the water, and the creatures that live on it and fly over it. PLEASE do not allow this to happen.

Sincerely,

streampublichearing@gcedc.com

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

No more data centers - not just here, but anywhere.

Sincerely,

Emma Steele

Subject:	GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I am glad that GCEDC plans to hold a supplemental public hearing on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has extended the written comment period. Additionally, I demand:

- The Board of Directors must be present at this hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal; and
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;

I may be in the Hudson Valley, not Genessee County, but the effects of a data center in NY state will be felt by ALL of NY state. No one in NY wants data centers destroying/polluting our natural resources, stealing our water and electricity, and raising our utility bills, meanwhile also poisoning our neighbors via air, water, land, and sound. No STAMP Data Center!

Sincerely,

Jayce Childs

Apollo acquired Stream in November and is led by billionaire CEO Marc Rowan, who co-founded the private equity firm in 1990 alongside partner Joshua Harris and billionaire investor Leon Black.

Black's relationship with Epstein over more than 20 years has been well documented. In October, the New York Times detailed the men's friendship, noting that Black, for years, was Epstein's primary benefactor. Black resigned from Apollo in March 2021 following reports detailing his relationship and business dealings with Epstein. Rowan then took over as CEO.

Rowan, worth $9.7 billion according to a Bloomberg estimate, has been a GOP megadonor for years, according to campaign finance filings. That includes $500,000 in donations to President Donald Trump's campaign in 2020 and a total of $3 million to the GOP and conservative causes in early 2025. $11.7 Million per job? Make it make sense? Where's the 9000 jobs going to come from?

Sincerely,

Thomas A Hewitt

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

It is of utmost importance for our state to respect the sovereignty and hear out the concerns of the Tonawanda Seneca Nation who have been stewards of this land for generations. Also, the citizens of NY should not pay (with tax incentives or our health) for AI companies to extract more of our wealth and environmental resources. AI has a lot of potential, but it is currently poised to benefit those who already have money and power and surveil and subdue those of us who stand in its way. The well being of the people and the land that sustains us must be put first.

Sincerely,

Sarah Brownell

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Please stop destroying the environment for the sake of our children and grandchildren.

Sincerely,

streampublichearing@gcedc.com

Cc: Sunrise Movement NYC
Subject: Public Comment on STREAM US Data Centers' STAMP Data Center Complex

To the Genesee County Economic Development Center (GCEDC):

My name is Avalon Akashi, the Campaign Partnerships Lead at Sunrise Movement NYC. We are a youth-led movement of New Yorkers fighting for a Green New Deal in our city and across the nation. We are campaigning for universal clean and affordable energy access for New Yorkers within the next five years, as one of the pillars of the GND.

We submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

Our organization is committed to the just implementation of the Climate Leadership and Community Protection Act. The proposed data center lies within a Disadvantaged Community, as designated by the Climate Justice Working Group, which subjects this project to review under the CLCPA. Per Section 7(3) of the law, in considering and issuing permits, licenses, and other administrative approvals and decisions, all state agencies, offices, authorities, and divisions shall not disproportionately burden Disadvantaged Communities. Given the threats posed by this project to the Tonawanda Seneca Nation which lies within this Disadvantaged Community, and our overarching respect for Indigenous sovereignty, we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of NYS Department of Environmental Conservations' recommendations with respect to the SEQR environmental review process, and call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts;

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public; and

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation. It also threatens our Climate Law and violates the sovereignty and way of life of the Tonawanda Seneca Nation.

In closing: we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of DEC's recommendations with respect to the SEQR environmental review process, and call on GCEDC to reject the incentives application from STREAM US Data Centers.

Sincerely,

Avalon Akashi
Campaign Partnerships Lead
Sunrise Movement NYC

Subject: Oppose and reject the unethical, harmful and just plain stupid BUFA Project Double Reed – the data center proposed by STREAM US Data Center for the STAMP mega industrial site in Alabama NY

Dear Genesee County Economic Development Center,

Remember the Virtual Reality Revolution? Neither do I.

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed – the data center proposed by STREAM US Data Center for the STAMP mega industrial site in Alabama NY. I oppose the financial incentives request submitted by STREAM US Data Centers. I demand that GCEDC follow all of NYSDEC's recommendations, and I call on the GCEDC to:

1. Reject the incentives application.
2. Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP.
3. Conduct a Supplemental Environmental Impact Statement (EIS) for the entire STAMP site taking into account new laws and regulations as well as other changes, INCLUDING CHANGES IN PLANS FOR THE SITE SINCE 2012.
4. Ensure the SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.
5. Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that CONSTRUCTION IS FORECAST TO TAKE AT LEAST FIVE YEARS.
6. Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public.
7. Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

I served the communities of Genesee County for 9 years connecting the awesome residents and visitors with their exceptional and beautiful natural resources. Water is the most vital resource for life, and we here in the Great Lakes region are wealthy with it. The fact that billionaires need to pollute lots of fresh water for their next big stupid venture is not our problem. Protecting our water and land and quality of life IS your responsibility.

This proposed Data Center project is unconscionable. Genesee County has struggled with water shortages for over a decade. Vital water for residential life and agriculture needs to be delivered from

Lake Ontario via the Monroe County Water Authority. Why this project has still not been completed is ridiculous. The money for this obviously needed vital project SHOULD NOT be held hostage by a short-sighted, polluting and useless Data Center. There are other ways to finance the water project.

You need to turn down this proposed Data Center project for the following reasons:

*Data centers use and pollute water. The communities of Genesee County, and especially the Tonawanda Seneca Nation and the Iroquois National Wildlife Refuge, AND all of the communities downstream from the watershed- which includes Rochester, Syracuse, and the rest of New York State - DO NOT need another source of toxic water pollution. Do you like safe water? I thought so. So do I.

* Data Centers provide ZERO economic growth for communities. They hire remote workers, source the materials and labor from outside the area and outside the US. Data Centers do not produce anything. They only take, THEY DO NOT GIVE OR SUPPORT.

*Apollo Global Management needs a cheap, large space with lots of water, and Genesee County DOES NOT need this data center.

*Data Centers take up valuable habitat and recreational space that increases property values and provides essential services like CLEAN WATER to everyone.

* Property values in the area will plummet.

*Energy costs for residents are already too high. A massive data center will cause energy costs to skyrocket, the way they have in other parts of the country with data centers nearby.

* These big tech billionaires have shown us who they are. They have no accountability and DO NOT CARE WHAT HARM THEY DO or who they do it to, whether it is children who commit suicide (Facebook), workers who suffer (Amazon), underage girls and boys who are trafficked for sex (Leon Black, founder of Apollo Global Management), or release of toxins into a town.

* AI is a garbage product sold by billionaires to investors using the lie that they will be "left behind" unless they jump on the bandwagon. AI makes mistakes that will only prove to be more harmful to all as its use grows. It absolutely does not help anyone or increase productivity and workers spend more time correcting AI mistakes than they save using it.

*Big Tech billionaire companies rarely deliver on their promises. Their whole motto is “move fast and break things”. Let’s not be the shrapnel left behind from stupid billionaires pretending to be God. Genesee County DOES NOT need to be a guinea pig. Remember Zuckerberg’s big META revolution? It never caught on, big surprise. These guys have dumb ideas all the time, and we DO NOT need to let them drag us down with them.

* If AI and these data centers are so important for national security, LET THEM BUILD DATA CENTERS ON MILITARY BASES. We have PLENTY of land holdings already in the military.

*These big tech companies have already stolen our attention, our privacy, our personal data, our biometrics, our mental health, our sense of connection and our peace of mind. They DO NOT need our LAND, WATER, AND AIR also!!

*There are other ways to develop the economy of Genesee County

This proposed Data Center project will only serve the big tech billionaires at the expense of every Genesee County Community and all of those who live downstream, which includes the rest of NY state to the east. I urge you to pass on this crappy proposal. Another opportunity that is truly beneficial to Genesee County will come along – one that will bring real positive growth and blessings instead of angry letters from surrounding cities. The GCEDC needs to go back to the drawing board with residents of Genesee County and the surrounding communities to do its job of creating a path for economic development that improves the quality of life and provides amenities, infrastructure and services that people ACTUALLY NEED while PROTECTING the residents and the region from unnecessary ecological and economic harm.

If you are not convinced that this harmful and DUMB project should be scrapped for mere common sense and human decency reasons, there are plenty of laws and ethics that need to be followed before breaking ground, as stated above.

Sincerely,

Shannon Lyaski

the data center proposed to go next to tonawanda brings great concern among the next generation. Your buildings cooling fans will give off noise pollution 24/7 that will disrupt animal life. The animals will leave and the woods will become scarce. Your buildings runoff rainwater and industrial spills will ruin the soil and contaminate the peoples wells, where most of us get our water. from. When the soil is unclean we are not able to harvest. This data center threatens future life.

Sincerely,

lucy felski

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I believe we need to preserve our lands and waters, preserve our energy grid, and ensure the safety of neighboring communities. Please stand with us to oppose this center at STAMP.

The 'arms race' towards more data centers will not help our communities, it will only further enrich already rich companies. Our communities are struggling to afford electricity and basic needs. This data center will not help. This company does not want to actually help New Yorkers, but profit off of us. Our

lands and waters make NY home, I love New York- ban/limit data center construction now until there has been time for establishing strong community protections. I appreciate your consideration, thank you.

Sincerely,

Carlin Shew

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

New York State leaders have a primary responsibility to act as stewards of our natural capital. This project creates an unacceptable risk to our state's most precious assets: our fresh water and the health of the land. History has repeatedly shown that when industry is permitted to self-regulate, the result is the externalization of costs where corporations take the profit, and the public is left to pay for the cleanup and the resulting healthcare crises.

While this project is framed as an investment, we must ask, for whom? True economic mobility for everyday New Yorkers does not come from high-pollution industries that offer little return to the local workforce. By giving away millions in public investment for a project that compromises our environment, the state is effectively selling out the ability of future generations to build a robust, sustainable economy.

Regulations are not red tape to be cut for the convenience of developers, they are essential safeguards born from past industrial failures. Removing these protections now is a reversal of progress. We demand that our elected officials and oversight agencies do their jobs by maintaining the standards meant to protect residents, rather than prioritizing the immediate demands of developers.

We are not asking for a lack of growth, we are asking for **the** right kind of growth**.** We call on New York to:

- Reject projects that threaten our fresh water and soil.
- Invest in renewable energy infrastructure that creates long-term, local jobs.
- Commit to a Just Transition that ensures our economy is healthy, resilient, and equitable well into the future.

Sincerely,

Subject:	GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I am glad that GCEDC plans to hold a supplemental public hearing on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has extended the written comment period. Additionally, I demand:

- The Board of Directors must be present at this hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal; and
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;

Important to meet demands #2,3 and 5 of the GCEDC Board!!! Thank you.

Sincerely,

Joyce Herman

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Good Evening. My name is Ron Rockwell and I live in Rochester NY.

I oppose granting any public funding to the data center project.

I want to talk briefly about my background. I am 67 and have worked in computing my entire life. I worked with the first wave of AI back in the 80s. I have worked with cloud computing for about the last 10 years

and the new wave of generational AI since early last year. The Fortune 100 company I now work for considers themselves an AI company and I am intimately involved in making that happen. We use AI tools on a daily basis and in a cloud computing context.

So I am not anti AI. I am not anti-business.

But I'm still going to tell you that the data center is a bad use of public money.

This will be an AI data center and because of that it's clear to me you didn't do a risk assessment. Because if you had, you would have found short term and long term risks that would have caused you to reconsider.

The short term risk is driven by the fact that the market for AI isn't growing as fast as expected.

Microsoft, Oracle, Google and Amazon among others are racing into this AI marketplace. They want you to use their AI products. So they are building AI data centers as fast as they can to sell their products to you. And companies like Stream are happy to build them for them. But there's a problem.

Right now every major provider of AI computation is bleeding money profusely. No one is making money. The losses are staggering and unsustainable and in the billions. Open AI reported losing 18 billion in the quarter ending in September. Something is going to have to give.

AI vendors themselves admit that demand has leveled off at a much lower level than they first projected. Why? Well, maybe because in a recent survey 90% of corporate respondents have reported that their first big projects for AI have failed to reach their business goals. It's a powerful technology but hard to master.

So what's going to happen? Everyone is going to start cutting back. What's that mean for Stamp? Even as you pursue this project, there is a really high chance that whoever is hiding behind that NDA is going to pay walk away dollars to end the construction as part of a cost cutting measure.

And you're going to be left with some very large refrigerated boxes in some level of completion that no one else will want.

Why not? Let's talk about the long term risk. Let's say you get this thing built. These AI data centers are soon going to be dinosaurs. I would guess 5 to 10 years at the outside. Why? Without getting too technical, AI right now needs hardware acceleration. That acceleration comes from specialized chips and there is only one company in the world that makes those chips. Nvidia.

I can guarantee you that computer scientists, governments and companies around the world are trying to figure out how to avoid needing those chips. Do it cheaper, do it smaller.

When that breakthrough happens, Nvidia based AI data centers will immediately become obsolete. They will be too resource intensive and expensive to operate and too expensive to retrofit. It will much more cost effective to build smaller centers from scratch.

And again, whoever owns that data center is going to pay the walk away fees and leave you with some large refrigerated boxes in the middle of the field that no one is going to want or repurpose.

Ladies and gentlemen, this is a goldrush. It's one thing to spend private money on it. It's a free country. It is entirely another to spend the public's money on it. Don't do it. It's that simple.

Thank you for your time.

Sincerely,

Ron rockwell

- The Board of Directors must be present at this hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal; and
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;

Sincerely,

Cartier Taranto

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

The proposed WNY STAMP Data Center would permit the robber barons to bring unneeded and unwanted AI to our region. Not only would this have minimal, if any benefit to the region (job-wise or otherwise), it promises to exploit our natural resources, pollute our waterways, and potentially increase our cost of living.

Sincerely,

Marcia E Buhl

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I am glad that GCEDC plans to hold a supplemental public hearing on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has extended the written comment period. Additionally, I demand:

- The Board of Directors must be present at this hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal; and
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;

I am writing as a concerned resident of New York state to oppose the proposed data center complex at STAMP in the Town of Alabama, New York. I oppose the financial incentives request submitted by STREAM US Data Centers, I oppose the granting of SEQR Environmental Approvals for the project, and I oppose the allocation of additional NYS direct and indirect subsidies, as well as permits and approvals to STAMP. The entire mega industrial site is a failing boondoggle and must be rethought. As Governor you must intervene immediately.

As a NYS certified Wildlife Rehabber, I must stress that a simple Google search will show that a data center is not good for wildlife.

The monster data center will destroy protected wetlands!
The America Bald Eagle nest is less than five miles away! The Endangered Short Eared Owl has lost 30% of the population since 2010 when WNY STAMP started!
Where are the 9,000 promised jobs? A data center employs few people. $1.46 BILLION tax payers subsidies, that is over $10 million per job created! THIS BOONDOGGLE MYST STOP TAKING AND WASTING TAXPAYERS MONEY!!

Sincerely,

Evelyn Wackett

My son and I attended the public hearing at the Town of Alabama Fire Hall on March 19. That was democracy in action. The majority of the people do not want this data center built for a variety of excellent reasons. Do we live in a democracy or an oligarchy>

Sincerely,

streampublichearing@gcedc.com

To the Genesee County Economic Development Center (GCEDC):

My name is Kim Fraczek, Director of Sane Energy Project. We are a 15-year-old non-profit with a membership of 15,000 New Yorkers working to decommission fossil fuels and build a renewable, equitable, accountable, and local energy system.

We submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

Our organization is committed to the just implementation of the Climate Leadership and Community Protection Act. The proposed data center lies within a Disadvantaged Community, as designated by the Climate Justice Working Group, which subjects this project to review under the CLCPA. Per Section 7(3) of the law, in considering and issuing permits, licenses, and other administrative approvals and decisions, all state agencies, offices, authorities, and divisions shall not disproportionately burden Disadvantaged Communities. Given the threats posed by this project to the Tonawanda Seneca Nation which lies within this Disadvantaged Community, and our overarching respect for Indigenous sovereignty, we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of NYS Department of Environmental Conservations' recommendations with respect to the SEQR environmental review process, and call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts;

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public; and

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation. It also threatens our Climate Law and violates the sovereignty and way of life of the Tonawanda Seneca Nation.

In closing: we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of DEC's recommendations with respect to the SEQR environmental review process, and call on GCEDC to reject the incentives application from STREAM US Data Centers.

Sincerely,

Kim Fraczek, Director,
Sane Energy Project
New York, NY

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

We need true energy independence for all with clean, renewable, sustainable and equitable local grids with interconnections and storage capacities for resilience and security. Wasting energy on inefficient ways to make profits for the elite is unfair and unsustainable.

Sincerely,

streampublichearing@gcedc.com

Dear GCEDC Board of Directors,

I am glad that GCEDC plans to hold a supplemental public hearing on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has extended the written comment period. Additionally, I demand:

- The Board of Directors must be present at this hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal; and
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;

Sincerely,

Kathryn McKinney

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Another proposed mega data center threatens our environment and undermines the state's clean energy goals. This massive AI STAMP project threatens the Tonawanda Seneca Nation air quality but it also will requires huge amounts of energy - which threatens our environment - and that some of that energy will come from dirty and dangerous sources.

Sincerely,

streampublichearing@gcedc.com

COMMENTS RE PROPOSED DATA CENTER COMPLEX AT STAMP

TO: Genesee County Economic Development Center Board

FROM: Lynda Schneekloth, STAMP Campaign of the Western New York Environmental Alliance (WNYEA)

DATE: 3/30/26

The WNYEA is a grassroots organization with members participating in key regional environmental battles and initiatives. As an alliance of western New York citizens and groups, we work together to identify and address initiatives and actions that would cause harm to our communities and regional ecologies. Opposition to the STAMP project, initiated and directed by the Genesee County Economic Development Center, has been one of our primary issues for the last two years and I write these comments regarding the latest proposal from these experiences.

Issue #1: The proposal by STREAM US Data Centers and Apollo Global Management is seriously incomplete and GCEDC should interrupt the process until the project proposal is complete and therefore the public can comment on what is being planned, not on what might be planned. So therefore, **the Alliance rejects the March 31, 2026 deadline as the final day to make comment for the record as the proposal is not complete.**

Issue #2: **The proposal must include a complete Supplemental Environmental Impact Statement as recommended by NYS DEC and required by law**. Note: The 2012 GEIS was for 'advanced manufacturing' and does not cover a 'data center' nor the scale of intervention of the data center proposal.

Issue #3: Your responsibility as lead agency is to see that all independent studies regarding environmental, economic and social/cultural impacts are completed prior to the SEQR review and made available to the public for comment. Environmental studies should include: noise, air emissions, geotechnical analysis, traffic, water impacts, scale of activity to mention a few. The economic impacts on the region must include not only proposed benefits, but costs to the community for PILOTS instead of tax abatements, cost of end of life for this project, and lack of sustainable jobs (only 125 job projected for project), the loss of current agricultural/recreational enterprises, loss of access to natural areas, and the impact on the rural community and Tonawanda Seneca Nation, their lands, waters, and way of life. These studies have not been done in this process nor in the past.

Issue #4: The data center project must be reviewed considering regulations and legislation passed since 2012 to include, but not limited by, the **Climate Leadership and Community Protect Act, cultural and environmental justice laws and 'disadvantaged communities' impacts** on the Tonawanda Seneca Nation. This would include input from the Nation, NYS DEC and State Historic Preservation Office.

Issue #5: The requested **tax abatement of $1.46 billion** is absurd. The project is, from the perspective of those living in the region**, speculative** as the 'operator' is unknown and there is a non-disclosure agreement that prohibits this information from being known. And importantly, the **separation of ownership from operations** would insulate STREAM and Apollo from the consequences of accidents, spills, excessive noise, flooding and all manner of noxious behavior.

Issue #6: **Jobs**. GCEDC promised the creation of 9,000 jobs at STAMP. This data center that would consume most of the site and nearly all available resources, will produce 125. The creation of 9000 new

jobs in Alabama, NY would not necessarily have been a good thing. Nevertheless, the value of economic development projects largely relies on job creation. So the questions remain: how would you create more jobs? How will you compensate the community for the 'loss' of projected employment through this project?

The WNYEA requests that GCEDC ReThink the entire STAMP project. It is industrial development amid a rural and recreational area, adjacent to the Tonawanda Seneca Nation. It is not a place for advanced manufacturing (the market has spoken) nor is it appropriate for a mega data center. Now that you own this land, what is the best use? Given the critical issues of climate change, species extinction and social/cultural threats, it is time to totally reconsider the best use and value of the landscapes of Genesee County.

Sincerely,

streampublichearing@gcedc.com

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Amanda L Neville

To: streampublichearing@gcedc.com
Subject: ALIGN comments opposing STAMP Data Center

Good afternoon,

To the Genesee County Economic Development Center (GCEDC):

My name is Jenille Scott, Climate Director at ALIGN: The Alliance for a Greater New York. We bring together labor, climate, and community for a more just and sustainable New York

I am submitting these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

Our organization is committed to the just implementation of the Climate Leadership and Community Protection Act (CLCPA). The proposed data center lies within a Disadvantaged Community, as designated by the Climate Justice Working Group, which subjects this project to review under the CLCPA. Per Section 7(3) of the law, in considering and issuing permits, licenses, and other administrative approvals and decisions, all state agencies, offices, authorities, and divisions shall not disproportionately burden Disadvantaged Communities. Given the threats posed by this project to the Tonawanda Seneca Nation which lies within this Disadvantaged Community, and our overarching respect for Indigenous sovereignty, **we oppose the financial incentives request submitted by STREAM US Data Centers and demand that GCEDC follow all of NYS Department of Environmental Conservations' recommendations with respect to the SEQR environmental review process,** and call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts;

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the

public; and

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation. It also threatens our Climate Law and violates the sovereignty and way of life of the Tonawanda Seneca Nation.

In closing: we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of DEC's recommendations with respect to the SEQR environmental review process, and call on GCEDC to reject the incentives application from STREAM US Data Centers.

Thank you,

--

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Leah Bargnesi

Not only is this an urgent time to defend our landmark climate law, but it's also a critical moment in the fight to stop a massive 2.2 million square foot, 500 MW AI data center next to the Tonawanda Seneca Nation, which is a part of the Western New York Science and Technology Advanced Manufacturing Park (STAMP), a proposed mega-industrial site. A data center at STAMP directly threatens the Nation's way of life, its continued existence on its homelands, and its treaty rights.
>
> **The Nation is asking all allies to take action in solidarity with their fight to STOP this massive data center and NY Renews is heeding the call.**

This month, major public comment periods are underway around the environmental review of the project and the financial incentive package for the developer (which is requesting a whopping $1.4 Billion in subsidies). **Can NEST help drive individual comments, as well as submit an organizational comment?**

Here is the link to a one-click tool that will drive individual public comments that you can send to your lists and networks.

And here is the link to a template that you can use to submit your organization's comments.
Simply copy & paste the content into an email, fill in a few sentences about your organization, and send to streampublichearing@gcedc.com.

Written comments on the proposed data center are due before midnight on March 31st. Our provided comments reflect the direct demands of the Tonawanda Seneca Nation. If you need any support, fellow coalition member Allies of the Tonawanda Seneca Nation is hosting an Action Hour on March 30th at 6pm to prepare and submit comments in real time.
Communities across the county are taking action to stop harmful data center projects and protect their water, air, and quality of life. If we come together, we can stop this one at STAMP, protect the Tonawanda Seneca Nation, and protect all of us who live, breathe, drink water, and want a livable future in NYS.

Please respond to let us know if you are able to take these actions.

In Solidarity,

March 30, 2026

To the Genesee County Economic Development Center (GCEDC):

My name is Adam Flint, and I'm submitting these comments as Director of Clean Energy Programs at the Network for a Sustainable Tomorrow (NeST). NeST is a community-based network of programs working towards social, environmental, and economic justice and equity in our region. NeST catalyzes and convenes new initiatives and partnerships, and does outreach and education to build a stronger and more resilient Southern Tier.

We submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

NeST is committed to the just implementation of the Climate Leadership and Community Protection Act (CLCPA), which we have worked to implement since its passage in 2019. The proposed data center lies within a Disadvantaged Community, as designated by the Climate Justice Working Group, which subjects this project to review under the CLCPA. Per Section 7(3) of the law, in considering and issuing permits, licenses, and other administrative approvals and decisions, all state agencies, offices, authorities, and divisions shall not disproportionately burden Disadvantaged Communities. Given the threats posed by this project to the Tonawanda Seneca Nation which lies within this Disadvantaged Community, and our overarching respect for Indigenous sovereignty, we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of NYS Department of Environmental Conservations' recommendations with respect to the SEQR environmental review process, and call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts;

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public; and

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation. It also threatens our Climate Law and violates the sovereignty and way of life of the Tonawanda Seneca Nation.

In closing: NeST opposes the financial incentives request submitted by STREAM US Data Centers, demands that GCEDC follow all of DEC's recommendations with respect to the SEQR environmental review process, and calls on GCEDC to reject the incentives application from STREAM US Data Centers.

Sincerely,

Adam Flint

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I am glad that GCEDC plans to hold a supplemental public hearing on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has extended the written comment period. Additionally, I demand:

- The Board of Directors must be present at this hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal; and
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;

Sincerely,

Johanna Cummings

The Tonawanda Seneca Nation and it's peolpe never wanted a STAMP site to begin with, it should.ve stayed a green space for the benefit of the environment and the people. I realize billionaires don't care about the environment but that doesn't mean you shouldn't. You still have a chance to keep the trust of the people of the town of Alabama by doing right by them. It upsets me as a leader when leadership disregards what the people want. It's really a shame. So do the right thing by the people of the town and not some billionaire company that does not care about the people that you are supposed to care about.

Sincerely,

Scott Logan

Subject: Stream Data Center

I will try to keep my complaint about this extremely aggressive business venture brief as it is really quite simple. Conservatively, a computer chip used in a data center will last for five years before it is both worn out from use and obsolete in its power draw to computing power ratio. After roughly ten years the server racks behind them need to be replaced for the same reasons. These costs, which are being granted an initial tax exemption of $1.46 billion ($11.7 million per job created) in this case, represent one third of the material price of building such a center to provide another generous estimation. All this is just to illustrate the tremendous startup costs, totaling at least $320 billion, which are as of yet unsupported by their profit of roughly $41 billion in the USA. As you can see, eight years of revenue to break even with the startup cost is at best aggressive and is very likely kamikaze strategy factoring the mammoth ongoing costs of replacing GPUs and server racks. This alone should be enough to dissuade investment in this sector, to say nothing of the horrific environmental impact, depletion of our fresh water, and strain on our already faltering energy grid and individual budgets for said energy.

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

The requested tax subsidy for this project is beyond absurd! There is nothing that could come in at $1.46 Billion and ever show a positive return on investment for the community. It is simply far too much money. Additionally, it is unsettling that Apollo Global Management is involved in this project given who its founders are, and it is concerning that Apollo will not disclose which technology company would be moving in. IF any tax subsidies are to even be considered, the community absolutely has a right to know which company(ies) are requesting their tax dollars, and the community has a right to know that in

advance and have the opportunity to express that they do not want their tax dollars go to the company(ies)—and have that expression seriously considered in the decision-making. The fact is, these are OUR (the community members') hard-earned dollars intended to go, through our taxes, toward the betterment of our community for purposes like education, roads, and other shared services. TRILLION-dollar tech companies and their billionaire owners and leaders absolutely DO NOT DESERVE, and they certainly DO NOT NEED this massive corporate handout. It will benefit the community in no way for those companies to siphon off our hard-earned dollars.

Furthermore, I am extremely concerned about the increase in energy costs an AI data center will require of residents in Alabama, the county, and across the state--and at a time when such an increase can be least afforded with every other cost on the rise.

I am concerned about the direct immediate environmental impacts of this project as well as about the long-term environmental impacts of requiring so much power. What type of power will be used and where will it come from? Will it be green energy? The dire impacts of climate change abound. We need to be focused on REDUCING our energy footprint and ensuring as much energy as possible is generated through sustainable means. THAT effort would be a far better use of state funds and resources than bringing in an AI data center.

I express my support the Tonawanda Seneca Nation. Their views, culture, and needs must be considered.

Most critically, I am absolutely terrified about possible impact of this project on local water resources. Data centers in other places in the country have left residents will virtually no usable water. Is the company that wants to come in proposing to recycle the water they use so that their impact on local water resources will be very limited? If not, they should not be allowed in. My sister and her family live near the STAMP site. I cannot have my family without water.

Below are several horror stories from reliable, respected news sources about people and communities impacted by the extreme water use of AI data centers, and more stories and videos are available. Many people have been left with poor-quality water or even without water after AI data centers move in.

- https://www.bbc.com/news/articles/cy8gy7lv448o
- https://www.youtube.com/watch?v=jjkaYyysYhA
- https://www.theguardian.com/technology/2025/dec/16/great-lakes-us-data-centers

- https://www.nytimes.com/2025/07/14/technology/meta-data-center-water.html#:~:text=Three%20of%20their%20neighbors%20have,month%20instead%20of%20every%20year.

Alabama has historically already had water issues. They area is extremely unlikely to be able to provide the necessary amounts of water for an AI data center and still be able to meet the needs of residents. We also do not want the data center draining our Great Lakes. When water availability comes into play, issues literally become potential life-or-death issues. Do not put our community and residents in this position. We do not want this data center.

Sincerely,

Rosalie Mangino-Crandall

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I am glad that GCEDC plans to hold a supplemental public hearing on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has extended the written comment period. Additionally, I demand:

- The Board of Directors must be present at this hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal; and
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;

Protect Mother Earth. She is the only one we have to pass down to future generations.

Sincerely,

Jennifer Reardon

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Hi, my name is Heather Wiley, a recently saved daughter of God. Yes, I saw Jesus like I see you. After being reborn, I see things from a new perspective. With that being said, I come to you to speak truth, and may your ears be quick to listen and hearts open to reason.

We have build a foundation on happiness, why destroy it with oppression. Look at the other families were data centers have already been placed, their water bills are as much as a car payment, electric bill as much as a mortgage payment, no water, or the water is being rationed, people are complaining of insomnia, migraines, health decline, lung issues, chest vibrations, and this is to name a few, not including what is said of their animals. To watch and see so many families and elderly people crying out for help, they feel as no one cares, they feel hopelessness against these big corporations. My heart breaks for them. Will they be given fair market value for their homes? Will they be able to sell their homes? How will this data centers affect the health of others, especially in the long term? How will this affect our children's health? How does it affect our farm lands, where is the water discharge going? Will we be drinking this water, will these animals be drinking this water? Will this be sprayed on our farmlands? How will it affect the surrounding habitat? There are so many questions, can we in faith guarantee that no harm will be done?

Last week in, I came across the Batavian new which mentioned Mr. Masse and the many nasty emails received by residents opposed to this data center. I was deeply saddened by this and am very sorry you had to experience this kind of attack, no one deserves to be yelled at or feel threatened by anyone. And so I ask of you each member to forgive those who've attacked you and that you show compassion on these families. Though they have attacked, remember they feel as though they are being cornered on their own land. What does a person do when a thief comes into the home? Do they not defend and attack until the thief leaves or is defeated? The homeowner doesn't give the thief and bed to lie his head so he can keep stealing.

These families are really crying out in desperation, looking to you and pleading for protection. So I call you to righteousness and ask for your support and protection from these corporations, say no to data and yes to our families.

Sincerely,

Heather Wiley

Sincerely,

Heather Wiley

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

My roots go back to the earliest days of the land that now makes up the State of NY. I have Native American ancestors.

As a 14th generation New Yorker and one who both works in energy efficiency and who believes that the Creator gave us creation to Steward - not dominate - the installation of data centers is antithetical to all of the aforementioned.

Data Centers consume water and energy, they will affect wildlife and the indigenous people.

Haven't we white people done enough to harm them and the planet already?!

Don't we have a responsibility to be different and do different for people and the planet?

Turn this down. Stop the exploitation of the earth and the people in the name of profot for the few.

Sincerely,

Melinda Terpening McKnight

Subject: Opposition to STAMP Data Center and Cider Solar Project in Genesee County

Dear Governor Kathy Hochul,

I am writing as a resident of Genesee County in NY, near the Iroquois Wildlife Refuge that holds deep personal meaning to me, a place that has been a significant part of my recovery after a car accident that left me disabled. My husband and I chose to live here intentionally, not just for the beauty of the land, but because I am disabled from a brain injury and rely on a quieter, less overstimulating environment to maintain my health and stability. Because of that, I want you to know: I am opposed to the current approach to renewable energy and this large scale industrial development in rural communities like mine. Such as the STAMP data center in the town of Alabama, New York and the Cider Solar Project in the towns of Oakfield and Elba, New York. I oppose the financial incentives request submitted by STREAM US Data Centers; I oppose the granting of SEQR Environmental Approvals for the project; and I oppose the allocation of additional NYS direct and indirect subsidies, as well as permits and approvals to STAMP. Our area takes pride in our farm land, these projects do not reflect our community values.

The placement of large solar installations and data centers in areas like ours does not feel thoughtful or balanced. These are not minor projects!
These will permanently alter the landscape, disrupt wildlife habitats, and change the character of communities that people intentionally move to for peace, nature, and space.

Our region includes wetlands and sensitive ecosystems, that are directly connected to the Iroquois Wildlife Refuge. These are not just open spaces.
They are protected habitats that support wildlife and ecological balance in this region. Yet projects of this size continue to be proposed in or near these areas. It is difficult to understand how this aligns with environmental stewardship. Clean energy should not come at the cost of the very environments it is meant to protect.

I'm also concerned about how close these projects are to the Tonawanda Seneca Nations. You have repeatedly emphasized inclusivity, equity and protecting communities of color. You've also said how you would make sure policies don't disproportionately harm communities of color. One would think that would also include historically underserved indigenous communities.
Your whole campaign has been about positioning yourself as someone who actively protects marginalized communities. You should be ensuring the Seneca Nations aren't burdened by environmental harm. They have spoken many times about not wanting these projects going forward, how this will harm their communities, future generations and even food sources on their sacred land. If these are your values, they should apply here too.

It also feels as though rural communities are being asked to absorb a disproportionate share of these developments, with limited transparency and insufficient weight given to the voices of residents who will live with the long term consequences. This feels more like a bureaucratic nightmare than “putting New Yorkers first”. Isn’t that what you always say? Protecting and strengthening communities? You always seemed to be advocating for community input, and how “the People” working with local governments. This violates your responsibility to protect New Yorkers, our communities and our well being. New Yorkers don’t want this. I don’t want this.

I also want to clarify a point that has been suggested publicly recently— that residents in this area were previously supportive of projects like these and are only now objecting, even being described as hypocritical. That does not reflect my position. I have had ongoing concerns about large scale development in this area, including solar projects, and it is frustrating to see those concerns characterized otherwise. I chose to live in Genesee County because I believed it was a place that would value and protect its land, rural character, and natural environment. It is difficult not to feel let down seeing those values no longer being protected.

The process has been difficult to follow, involving multiple agencies and layers of decision making that are not easily accessible to the public. For me, being disabled with a brain injury makes it especially challenging to keep up with complex and constantly evolving information. That should not be interpreted as support— it reflects how difficult this process has been for residents to understand and engage with.

This also raises a broader concern about accessibility and inclusion.
Decision making processes that are overly complex and difficult to follow do not equally serve all residents. For individuals with disabilities, including myself, this creates a real barrier to understanding and participating in decisions that directly impact our health, environment, and daily lives. That is not equitable, and it should not be considered acceptable. I am disappointed by the lack of consideration for individuals with disabilities throughout this process. I am not able to attend meetings or constantly monitor updates, and I expected better for people like me.

For me personally, this is not an abstract issue. The environment here directly impacts my quality of life and health. Expanding industrial scale projects into these spaces risks taking away the very conditions that made it possible for me to live here in the first place. I am sure there are other disabled people in the community who feel the same.

I am asking that you take a more critical and protective approach to approving these projects. One that prioritizes environmental integrity, respects rural communities, acknowledges the importance of nearby Indigenous lands, cultural considerations and ensures that development is not simply pushed into areas with less resistance. I urge you to reconsider and stop how and where these projects are being implemented, and to ensure that communities like mine are not overlooked in the process. Our future generations depend on the protection of these landscapes, not their conversion into industrial development.

Thank you for your time and attention.

Sincerely,
Taylor Pfonner Pache
and Matthew Pache
Corfu, New York.

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Margaret D Andersen

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Additionally, supporting AI is a dangerous enterprise for the state to be investing in. AI needs controls on its usage to prevent its misuse and those controls have not yet caught up with the pace of its expansion. AI will increase the cost of energy for all New Yorkers as its huge requirements for energy will be a burden we all share in terms of increased need for infrastructure. No AI plants should be built without the building entity including a plan to provide self-generated energy (wind, solar, batteries, etc).

Sincerely,

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I am glad that GCEDC plans to hold a supplemental public hearing on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has extended the written comment period. Additionally, I demand:

- The Board of Directors must be present at this hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal; and
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;

Sincerely,

Marica Bohn

Comments on Data Center

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I am a resident of Rochester, NY, and a frequent visitor to the Iroquois National Wildlife Refuge where I hike and kayak. This is a beautiful natural area that should be preserved from industrial development. Locating the Western New York Science and Technology Advanced Manufacturing Park (STAMP) in this area is a giant mistake that will increase fossil fuel emissions if only from the people commuting from the closest population centers around Buffalo and Rochester to jobs at STAMP.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation."

Context and additional information:

The Tonawanda Seneca Nation is fighting a massive 2.2 million square foot, 500 MW hyperscale data center to be used for AI right next to the Nation as a part of the Western New York Science and Technology Advanced Manufacturing Park (STAMP), a proposed mega-industrial site underwritten by NY state subsidies and facilitated by NY state permits and policy. A data center at STAMP directly threatens the Nation's way of life, its continued existence on its homelands, and its treaty rights. **The Nation is calling on all allies to take action in solidarity with their fight to STOP this STAMP Monster Data Center.**

This fight is urgent and the stakes are high. This month, two major public comment periods are underway around the environmental review of the project and the financial incentive package for the developer. For all residents of NYS: the STAMP developer is accepting written comments on the proposed data center until midnight on March 31.

Communities across the county are taking action to stop harmful data center projects and protect their water, air, and quality of life. If we come together, we can fight the monster at STAMP, protect the Tonawanda Seneca Nation (as well all of us who live, breathe, drink water, & want a livable future in NYS), and WIN.

Here's a background document for more information and links to follow Allies of TSN online: Linktree, Facebook, Instagram and website.

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Sandra Montville

Subject: Comment Submission

Public Hearing - 7 PM March 19, 2026 at the Town of Alabama Fire Hall, 2230 Judge Road, Basom, NY 14013 - **Notice** - **Presentation** - Minutes - **Video** - Comments may also be submitted by **email**.

Fri 27 Mar, 2026

Public comment submitted to GCEDC

Re: Transcripts of my Thurs 19 Mar, 2026 comment.

It seems your website calendar with schedules and video links has strategically erased the 19 Mar, 2026 public comment period, during which hundreds of people showed up, almost unanimously against the latest iteration of STAMP.

https://www.gcedc.com/gcedcmeetings

Not only is there no video, the existence of the 19 Mar, 2026 event was erased from the official calendar.

Just in case this omission is intentional, I now submit for the record (a reasonable facsimile of) what I said at the comment period which ran from around 7PM till after midnight.

“My thanks to the stenographer for her hard work tonight.

I talked to the driver in the Local 435 truck parked outside. I understand his position that there are thousands of construction jobs lined up. The problem is that GCEDC isn’t properly vetting companies that want in on STAMP. For example, Stream US Data Centers and Apple Global Mgmt are requesting inordinately large sales tax breaks ($1.4 Billion over 30 years).

Since there are 58,000 people in Genesee County, that comes to every man, woman, and child subsidizing a multi-billion dollar company from Texas to the tune of $24,000 each.

How did this happen ? Incompetence ? Indifference ? Kickbacks ? Baksheesh ? This is not acceptable. In fact, Stream US Data Centers submitted a Local Labor Waiver to lower local hires from 90% to 40%.

GCEDC is enabling billion dollar corporations to rip off the people of Genesee County. This is criminal malpractice, the people of Genesee County deserve better, and the workers of Local 435 deserve better projects.

Since I've been coming to these meetings for 3 years with no results, I have requested a forensic audit by the NYS Comptroller, Investigations Division, the Offices of the Inspector General of NY, and the Office of the NYS Attorney General. May I submit to you a copy of my letters to these agencies ?

All these videos will be replayed at your trials."

Thank you,

Subject: Batavia High School and Pembroke High School

Hi!

I'm Emma with All-American Publishing. We're producing Football Shirts for Batavia High School and Basketball Shirts for Pembroke High School. We are reaching out to a small number of local businesses to be highlighted.

Your business would be highlighted on 100 shirts per school. For Batavia High School, the t-shirts will be thrown out into the crowds at the Home Football Games! For Pembroke High School, the t-shirts will be given to the Basketball Players and thrown out into the crowds at the Basketball Games!

Businesses like yours help make the shirts possible, and in return your brand is seen by students and local families throughout the season. All of our products are provided at no charge for the school.

We're collaborating directly with Alex Veltz, the Football Coach at Batavia High School and Matt Shay, the Boys Basketball Coach at Pembroke High School. Only a select number of local businesses will be featured.

Would it be okay if I sent you a quick overview?

A lot of businesses like to increase their exposure. Here are some of the other schools we are working with:
* Caledonia-Mumford High School (Fall Sports Posters)
* Churchville Chili High School (Spirit Shirts)
* Letchworth Central High School (Spirit Shirts)
* Pavilion Central High School (Fall Sports Posters)

Emma
Project Coordinator - All-American Publishing
5411 W. Kendall Street, Boise, ID 83706

If you no longer wish to receive these emails, please reply with the words "opt out" and I will remove you from my list of businesses to partner with on this project.

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Glenna Mcguffin

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I am glad that GCEDC plans to hold a supplemental public hearing on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has extended the written comment period. Additionally, I demand:

- The Board of Directors must be present at this hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal; and
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;

As a business owner and homeowner in Genesee County I say no to data centers!!!!

Sincerely,

Tamara Parker

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Dear Gov. Hochul and the GCEDC,

As a taxpayer in the state of NY, I DO NOT want my tax dollars to be spent on this Data Center adjacent to the Tonawanda Seneca Nation! I ask you to STOP your plans for this project immediately!
Here are my reasons:
1) The Seneca tribal nation will have to endure constant noise pollution.

2) There will be a massive amount of land used to build it, The use of this land that will destroy natural habitats for animals and remove trees that are so vital for absorbing carbon emissions. In a time when we need to fight climate change, this project will do just the opposite.
3) There will be an extraordinary level of resources used to power this data center such as undue amounts of water, and a tremendous stress on the electricity grid. Also, as mentioned above, the massive use of land will negatively affect environment!
The building of the Data Center WILL NEGATIVELY impact the Seneca Nation's way of life.. Hasn't our country done enough harm to Native Americans through the centuries?? Have we learned nothing?? The tribe has been through enough! Do we need to impose this behemoth atrocity on them, as well? The answer is a resounding NO!!!
I suggest, Gov. Hochul, that if you want so badly to build a data center, that you do so in your own backyard. How would you like to deal with all of the negative affects on your way of life. I doubt that you would like it, So, Don't impose this on others!
Gov. Hochul, you have not been so great at supporting and protecting the environment. I will keep your decision on this Data Center in mind when I cast my ballot in November!
Kristine Mich
Rochester, NY

Sincerely,

Kristine Mich

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Lyndsie Guy

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Data centers should not be heavily subsidized (over $6M/job created based on what I read) nor should they contribute to pollution and especially not impact vulnerable and indigenous communities.

New York is a FABULOUS place to build high-tech industry and even data centers--but it needs to be done right--respecting the rights of vulnerable and indigenous communities; using clean energy sources; not impact the utility rates of residential customers; AND not subsidized to line the pockets of billionaires.

STOP THIS PROJECT until the developer can show agreement from the community, and the site is supplied with self-sufficient clean energy sources.

Sincerely,

streampublichearing@gcedc.com

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

The data center and STAMP as a whole is bad for our economy, our ecology, and definitely a huge violation of equity - just the latest in centuries of middle fingers directed at the Tonawanda Seneca. The whole project is an atrocity.

Sincerely,

streampublichearing@gcedc.com

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

This rapid buildout of this data center at a time of high uncertainty about the future of AI, and when affordability is rightfully the top concern of most regular people, is unwise and is harmful to our future. The enormous demand by such data centers for electricity when we must be focused on energy efficiency and on rapidly expanding renewable energy to meet climate goals is shortsighted and wrong (and dare I say ought to be illegal)! Furthermore, the region of the STAMP site is MUCH more valuable as the extensive wetlands and mature forest than it ever will be as an industrial or economic development

project. The Tonawanda Seneca Nation members deserve to maintain their sovereignty and their healthy environment and way of life..

It is unconscionable to waste taxpayer dollars on incentives and tax breaks for such a massive, for-profit, and damaging project that won't even provide significant additional jobs. I live in Monroe County but even so, will likely be negatively impacted by the water greed of this mega development; I cannot support that. Water is too precious a resource and need to waste on such a risky project.
Let's take a step back. We don't want this polluting, noisy, wasteful, and damaging industrial project in NYS.

Sincerely,

streampublichearing@gcedc.com

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

streampublichearing@gcedc.com

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

The wealth divestment that left the state tax base limping is about more than high taxes and no financial growth. People are also leaving the state for environmental disasters like ruining waterways, soil conditions, destruction of wildlife sanctuaries and environmental poisoning such as the ill placed 33 highway that caused cancers, respitory illness, declines in mental health health and short sighted planning for future growth. Where's the water your family will need for sustainably coming from?

Sincerely,

Sonya Rice

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I am glad that GCEDC plans to hold a supplemental public hearing on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has extended the written comment period. Additionally, I demand:

- The Board of Directors must be present at this hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal; and
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;

As someone who waited several hours to speak at the March 19th hearing, it was discouraging and disrespectful that GCEDC board did not attend the hearing they called. Maybe you really only care about the money you will make off the project and not what the community thinks about it. Please prove me wrong.

Sincerely,

John Keevert

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

streampublichearing@gcedc.com

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Susan Lob

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I am very strongly opposed to the proposal for a data center in Genesee County NY because it will negatively affect my electric bills, my water quality, my quality of life and because the tax breaks a billion dollar company would get is truly outlandishly high! I AM OPPOSED!

Sincerely,

Sarah Covell

March 27, 2026

INTERFAITH CLIMATE JUSTICE COMMUNITY

c/o RSUCC, PO Box 207, Grand Island, NY 14072

We write to you as people of faith. We are parents, grandparents, grateful inhabitants of the Great Lakes region of western part of New York. We work to protect the gift of creation and pass it onto our children and future generations. It is with these values and concerns that we make comments at this hearing.

This project does not belong in Alabama, NY, as its scale is nearly unfathomable and nothing is said about the end of life of this complex or the electronic equipment used in the facility - and all for 125 jobs! Given its inappropriateness, we are opposed to your support of the development of a data center at all as it is an affront to the rural community, to the Tonawanda Seneca Nation, and to the ecologies of the surrounding wetlands and forests. Our greatest hope is that you will see this violence you are doing and step away from this project. We also know that this will not happen.

Therefore, we have several requests:

1. Conduct a Supplemental Environmental Impact Statement focused on data centers; the 2012 GEIS is totally inadequate for evaluating the impact of this project.

2. The criteria must be updated to include new laws and regulations such as the CLCPA and Environmental Justice laws.

3. You must incorporate a review of cultural and environmental justice toward the adjacent Tonawanda Seneca Nation with input from DEC and SHPO.

4. You must have information on independent studies on noise, air emission, geotechnical analysis, traffic, water, and other studies before the hearing so that public comment can be made. Adjustments after the fact are not acceptable.

5. You must include detailed impacts analyses for construction and operations.

6. There should be no financial or other incentives to build a data center at STAMP.

These are only a few of the issues that we anticipate will be addressed if the hearings go forward and you do not end this project and RETHINK STAMP. This type of project and the thinking behind it does grave moral injury to the community, the Tonawanda Seneca, the region and most certainly, future generations.

Sincerely,

Sister Eileen O’Connor, RSM, Co-Convener

Roger Cook, Riverside-Salem, UCC, Co-Convener

Sincerely,

streampublichearing@gcedc.com

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I object to giving millions of dollars to subsidize a data center. What happened to the bills calling for a moratorium on large data center additions? About giving the PSC time to sort thr0ugh data center applications and make the best decisions for our grid system and the ratepayers? People will remember your choices against affordability.

Sincerely,

streampublichearing@gcedc.com

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Laura Wink

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

streampublichearing@gcedc.com

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Eugene J Dougherty

It is truly concerning to think about what this project could do to nature in this area. God didn't bless us with land, water and a place for wildlife to happily dwell for us to come in and massacre! The eagle alone are making a comeback and your plans will destroy them and more.

Sincerely,

Veronica Eckerson

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

We should first strive to reduce the demand for computing power, especially for unnecessary applications, including many applications for AI or crypto. Only after demand has been reduced to the minimum should we build any new data centers.

Sincerely,

streampublichearing@gcedc.com

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Our energy costs are rising. We need to focus our resources - both in time and money - on building reliable electric infrastructure for residents and businesses that employ a significant number of people, contribute to local communities and aren't subsidized by the government such a high cost to tax payers and the environment. Our representatives chose where to allocate resources - let's choose people and local communities

Sincerely,

streampublichearing@gcedc.com

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Mark Pezzati

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Data centers in rural communities impose high costs on local resources and offer no economic benefit. Subsidizing them with taxpayers' money only makes matters worse!

These facilities consume vast quantities of electricity and water, putting a strain on infrastructure and increasing reliance on fossil fuels. Their heat emissions and electronic waste also threaten local ecosystems and the local population's way of life. Yet they create few permanent jobs, raise property costs and restrict land use for agriculture or small businesses, thereby concentrating profits for

corporations rather than residents.

Using public funds to support such ventures forces taxpayers to shoulder environmental and social risks without any guaranteed long-term returns, making these subsidies a questionable and potentially unfair investment for rural communities.

Sincerely,

Rainer Keller

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I am glad that GCEDC plans to hold a supplemental public hearing on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has extended the written comment period. Additionally, I demand:

- The Board of Directors must be present at this hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal; and
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;

Sincerely,

Meg Schechter

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Diana Strablow

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

It's bad enough our county has been overrun with solar panels but now this?! We do not want this horrible monstrosity in our county. Please do not allow this here! Have respect for the people in this county that you are supposed to be representing and do not allow it here.

Sincerely,

Kathy Wiley

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Governor Hochul:
This is not the kind of action people vote Democratic for. We are not interested in hosting rabid power-gobbling stations in New York State. Especially not at the expense of native American communities, which have already been done out of their lands and ways of life. Nor at the expense of the Nature they and we prize and depend on for survival.

Sincerely,

C.M. P

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

streampublichearing@gcedc.com

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Dean Griswold

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

LEROI ARMSTEAD

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Also, I oppose this project due to:

- The application claims no impacts to wetlands or water bodies. However, project site plans show multi-story structures built up to the borders of two regulated wetlands.
- Design would create multiple extensive impoundment areas.
- The entire site lies upstream of the Tonawanda Creek, which provides drinking water via wells to Nation citizens.

- Expert hydrogeological review by Dr. Madeline Nyblade, Ph.D., raises extensive questions about faulty assumptions regarding hydrological flow.

Sincerely,

Ellen Collins

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Kyra Legaroff

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Sarah Feuerstein

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Evelyn Diaz

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Gov Hochul, you, GCEDC, and Alabama officials seem to be missing the larger question which is not can this data center be built, but rather, should it? I believe it should NOT.

Sincerely,

David Steele

Data centers require astronomical amounts of energy and water, thereby posing an existential threat to humans and all life on earth. This data center would also violate the sovereignty of a Native American nation. Greenlighting the development of this data center in Alabama, NY, would be utterly immoral and irresponsible.

Sincerely,

Regina Goetz

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Keren carmeli

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

These MEGA data centers do absolutely nothing to enhance the quality of life in the areas where they are located. They rob the communities of the most valuable natural resource~ water. We cannot give our water away. Please say NO to the Data Centers.

Sincerely,

Cynthia A Butterworth

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I am glad that GCEDC plans to hold a supplemental public hearing on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has extended the written comment period. Additionally, I demand:

- The Board of Directors must be present at this hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal; and
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;

I did not get a chance to speak at the first meeting and I would like to.

Sincerely,

Judith Schilling

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Daniel Strum

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

Please establish a moratorium on new AI Date Centers. They are only beneficial to that industry and not local residents!!!! Make the industry pay for and create their own sustainable energy, upgrade their technology to use less water and not ass for tax breaks that produce little benefits for our communities!!!!!!

Sincerely,

Anthony Antonucci

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

streampublichearing@gcedc.com

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

No subsidies for energy drains. 100% self funded renewable energy for large industrial used. Obey the climate law.

Sincerely,

streampublichearing@gcedc.com

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Shawny-Lee C Ferguson

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

streampublichearing@gcedc.com

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Robert Smith III

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

streampublichearing@gcedc.com

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Adrienne Fleckman

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

streampublichearing@gcedc.com

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

streampublichearing@gcedc.com

I am very strongly opposed to the proposal for a data center in Genesee County NY because it will negatively affect our electric bills, our water quality, our quality of life and because the tax breaks a billion dollar company would get is ridiculous

There is no guarantee that any jobs for the local area will be generated or that the local economy will benefit. This is a giveaway for the already wealthy tech companies at the detriment of people in our area , and indeed, all of New York State.

I AM OPPOSED!

Dear GCEDC Board of Directors,

I am glad that GCEDC plans to hold a supplemental public hearing on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has extended the written comment period. Additionally, I demand:

- The Board of Directors must be present at this hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal; and
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;

This data center is very ill advised with so many negatives and the only positive is your big payday if it comes to town. Educate yourself on all the pitfalls of rnormous data centers and stay true to the residents if this area who pay high taxes already and don't get any subsidies. Also, with the high energy demands of the center, the residents electricity bills will skyrocket, higher than they already are. Historically this always happens when a center comes to town. Also, the threat to the Seneca nations way of life and the proximity to the Iroquois Natuon refuge, make this a highly unsuitable tenant for the area, the noise, lights and heavy construction for five years will cause these endangered and critical species to flea. The heavy trucks and machinery for the five years over our roads and bridges will destroy them and the taxpayers will be footing the bill for the repairs since you gave a historically high tax exemption to a for profit company owned by billionaires. Do you Realky want this as your legacy? I know you are desperate to fill the site, but there couldn't be a worse candidate. All negatives and No positives for this area. Shame on you all!

Sincerely,

Nadine Wawrzyniec

Wow! Strong, insightful and clear letter! Thank you, Jonathan!
Since you mentioned it at the FMCE meeting, is it okay with you if I share the link to your article with all of the FMCE members?
Sally

On Fri, Mar 27, 2026 at 10:38 AM Jonathan Cloud - Possible Rochester <jcloud@possiblerochester.org> wrote:

> Dear GCEDC Board Members:
>
> Western New York does need economic development. It needs good jobs, resilient communities, and a future aligned with ecological reality. But the Science, Technology and Advanced Manufacturing Park, or STAMP, in Genesee County has become a case study in how not to pursue that future. What is being advanced there is not careful regional planning. It is a high-risk model of publicly subsidized industrialization imposed on a uniquely sensitive landscape, immediately adjacent to the Tonawanda Seneca Nation's Reservation Territory and near the Iroquois National Wildlife Refuge and state wildlife management areas.
>
> The central problem is not simply that STAMP is controversial. It is that the controversy is rooted in substantive concerns that have never gone away: wetland vulnerability, wastewater disposal, Indigenous sovereignty, habitat disruption, cumulative industrialization, and a pattern of forcing projects forward before public confidence and environmental due diligence have been earned. Those concerns are not hypothetical. In 2023, construction of the STAMP wastewater pipeline through the Iroquois National Wildlife Refuge was halted after drilling operations spilled bentonite slurry into protected wetlands, and the U.S. Fish and Wildlife Service later moved to revoke the permit.
> That episode should have prompted a fundamental rethink. Instead, the project has continued to expand in ambition and scale. The newest proposal for a Stream U.S. Data Centers campus at STAMP is now roughly 2.2 million square feet, would occupy about 90 acres plus 40 more acres for temporary construction logistics, and is projected to require about 500 megawatts of power, 12 diesel backup generators, and roughly 20,000 gallons per day of water and wastewater handling. The project's own filings state that stormwater now sheet-flows toward

wetlands west of the site and that development would replace those conditions with engineered collection and discharge systems.

Those numbers matter. Five hundred megawatts is not a trivial increment of demand; it is the kind of load that reshapes the regional energy equation. Investigative Post reported that grid experts warned a data center of that scale could raise electricity costs for residential and commercial customers, while also consuming a huge share of the region's low-cost hydropower advantage. NYPA's own economic-development hydropower programs are explicitly justified in terms of job maintenance or creation and capital investment in New York. The Tonawanda Seneca Nation and its allies have argued that using scarce subsidized hydropower for a massive data center with a very poor jobs-to-power ratio would betray the public purpose of those allocations.

The economics are shaky in another way as well. According to recent reporting, local officials are considering subsidy packages for the Stream project that could total roughly $1.46 billion for only 125 jobs, or about $11.7 million per job. Even GCEDC's own public statements emphasize the same 125-job figure while touting large capital investment totals and projected PILOT revenues. That is not a persuasive employment strategy for a region that needs durable, broad-based prosperity. It looks far more like a transfer of public leverage into a capital-intensive, low-employment facility whose main value proposition is access to land, power, and tax relief.

Supporters will say that STAMP is about future industry, not nostalgia; that Western New York needs to compete; that big projects require big infrastructure. Fair enough. But "future industry" is not a synonym for wisdom. The test is whether a project is appropriate to place, scale, ecology, and community. On that test, STAMP keeps failing. The site sits beside the Tonawanda reservation and the Nation's Big Woods, a critical area for hunting, gathering, ceremony, and cultural continuity. Nation leaders and residents have consistently argued that industrialization at STAMP threatens not just nearby habitat but treaty-protected relationships to land, water, and nonhuman life. This is not a peripheral concern to be acknowledged and brushed aside. It is central to any honest accounting of what this project means.

Nor does the process inspire confidence. The Genesee County Economic Development Center has continued to act as both promoter of STAMP and, at key junctures, the entity overseeing environmental review. The Tonawanda Seneca Nation and Sierra Club have challenged that arrangement in court, arguing that the project was pushed ahead without the full, project-

specific scrutiny required under SEQRA. Whether or not every legal claim succeeds, the broader governance issue is obvious: the more that promoters of a megaproject also control the framing of its impacts, the less legitimate the process appears to the public.

There is also a deeper regional lesson here. For years, STAMP has been sold as a transformational megasite. Yet one major tenant, Plug Power, is now officially out, selling off the land and substation infrastructure it had acquired there. Edwards Vacuum appears to be moving toward operations, but that does not resolve the underlying question of whether STAMP's overall development model makes sense in this location. A project can have one viable tenant and still embody a fundamentally flawed planning logic.

What would a better approach look like? It would begin with the opposite premise: not "how do we force heavy infrastructure and hyperscale facilities into this landscape?" but "what forms of livelihood, industry, restoration, and stewardship actually fit here?" It would treat the Tonawanda Seneca Nation not as an obstacle to be managed, but as a sovereign neighbor whose ecological knowledge and treaty rights should shape any regional future worthy of the name. It would prioritize economic development that creates more jobs per public dollar, strengthens local supply chains, reduces pollution burdens, and works with living systems rather than against them. That is not anti-development. It is intelligent development.

STAMP, as currently conceived, is a cautionary tale. It reflects an old paradigm in which land is treated as a platform, public subsidies as bait, and local opposition as a communications problem. Western New York deserves better than that. The Rochester region, the Finger Lakes, and our neighboring communities should be insisting on a development model that is ecologically literate, fiscally serious, and grounded in justice. On those terms, STAMP is not a vision of the future. It is a warning from the past.

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I am glad that GCEDC plans to hold a supplemental public hearing on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has extended the written comment period. Additionally, I demand:

- The Board of Directors must be present at this hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal; and
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;

Sincerely,

Susan Domina

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Why is no one listening to the people? Those that don't live here should not have a say!! We know all the damage that will be done from our animal habitat, to the indigenous tribes, to clean water, noise pollution, I could go on ! Question for them should be, would you put it in your back yard? If not, then there's your answer! These residents need lawyers and people that know the law!! There's too much money exchanging hands behind the resident's backs!! Put your data centers in the cities!! They're the ones that benefit the most, also with the solar!!

Sincerely,

Cheryl Nelson

Subject:	STATEMENT IN OPPOSITION TO PROPOSED FINANCIAL INCENTIVES TO STREAM U.S. DATA CENTER
Attachments:	SCNG Comments to GCEDC March 19 2026 hearing.pdf

Please see attached statement

To : Board members of the Genesee County Economic Development Agency and CEO Mark Masse

I am submitting the following statement for the Sierra Club in opposition to the proposed financial incentive package being considered for Stream U.S. Data Center's Project Double Reed. The Sierra Club also opposes the project on environmental, social justice and procedural grounds. I read some of the statement at the hearing March 19, 2026, but couldn't read the entire text in the amount of time allotted. The Sierra Club will be following up with more written comments.

Sierra Club Comments to Genesee County Economic Development Center regarding application of Stream US Data Center and Apollo Financial Management.

My name is Diane Ciurczak and I am speaking on behalf of the Sierra Club Niagara Group with members throughout the seven counties of Western New York including Genesee County and for the statewide Atlantic Chapter.

The Sierra Club opposes the financial incentives request submitted by STREAM US Data Centers and Apollo Global Management for their proposed data center complex at STAMP and calls on the GCEDC to reject their incentives application.

Before offering the biggest tax break for a data center in US history to STREAM and its anonymous tenant, or any incentives at all, GCEDC should consider the following:

1. No industrial development should be located at the STAMP site in the first place. It's adjacent to the Iroquois National Wildlife Refuge, two other wildlife refuges, and the Tonawanda Seneca Nation. It is the subject of a treaty in which the United States promised the Nation it would be able to live in peace. It is also near a residential area in a farming community. This pristine area would be destroyed if this massive, noisy, polluting data center were built here.

   This will not be a quiet, environmentally sound development

2. GCEDC must get a fully completed site plan from STREAM and then complete a Supplemental Environmental Impact Statement as recommended by NYS DEC and required by law. In fact it should follow all the recommendations made by the DEC. There are many unanswered questions as to how this behemoth will be constructed and what impact it will have on the community and the environment. The 2012 GEIS never contemplated hosting the hyperscale data center industry and their impacts were never studied. Data Centers are being opposed around the country, don't invite one here.

The proposed data center will cause noise pollution. The 198 chillers on the roof, the computers, the diesel generators, the trucks, will emit continuous noise and/or air pollution 24 hours a day every day.

Under the Law GCEDC must protect wetlands but the site plan indicates that the land will be dewatered during construction. Horizontal Directional Drilling will be used to install telecommunications equipment under several streams even though the last time GCEDC used it they spilled hundreds of gallons of drilling fluid into the Iroquois National Wildlife Refuge. HDD has led to damage to wells in Monroe County and dewatering has cost communities their water supplies across the country.

3. 500 MW of electricity from the NYS grid will be appropriated to this energy hog. 500 MW is 20% of the entire capacity of the Niagara Falls hydroelectric power station. It's enough power for all of Erie County. It will raise electric rates for everyone, because even if some infrastructure at the STAMP site is paid for by GCEDC or STREAM , directing that volume of electricity to one user will impact other parts of the grid that will require repair or upgrade. That will be paid for by all ratepayers. Under the law of supply and demand prices will go up and that has happened in all the states that host the largest number of data centers. NYS ISO that runs the grid has already said that the energy demand from data centers will strain grid capacity and impact its reliability. The effect of Stream's back-up plan on other users in the event of a power failure is not known or even considered.

4. The project will violate the CLCPA and undermine the state's ability to meet its obligations to reduce greenhouse gas emissions under the law. GCEDC says that it is not obligated to follow this law, but if GCEDC doesn't do it then the DEC and other agencies will have to

do it when STREAM or GCEDC asks for permits This project will add to the volume of greenhouse gases going into the atmosphere.

5. GCEDC must inform the public of the name of the tenant and other information that is being withheld about who will be operating this data center. The law requires full disclosure of what our government is doing and there is no law that shields the name of this operator. We live in a democracy, not a dictatorship. What kind of a corporate actor is this and why is GCEDC and STREAM hiding it? In fact, the financial incentive package implies that the sales tax incentives will be given to the unidentified tenant for $3 billion worth of equipment purchases even though it has not made an application for them as required by the General Municipal Law. By separating ownership from operations, STREAM will insulate itself from the consequences of accidents, spills, excessive noise, flooding and all manner of noxious behavior.

6. GCEDC must comply with the provisions of the CLCPA which safeguard "Disadvantaged Communities" and the 2025 Environmental Justice Siting Law. This project places a disproportionate pollution burden on the Nation and other neighbors of the STAMP site which is in an area that has been designated Disadvantaged by the Department of Environmental Conservation.

7. GCEDC must explain how it will meet its goal of creating over 9,000 jobs that it promised the Town of Alabama when it sold it STAMP, if all the power and resources are allocated to STREAM for the sake of a possible 125 jobs, some of which could even be located outside the area. Contrary to its CEO's comments to the New York Times, jobs do matter, and this beautiful place should not become a state sacrifice area so that NYS can maintain its competitive edge as he argues.

Diane Ciurczak
Vice-Chair of Sierra Club Niagara Group
Buffalo, New York

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed — the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

- Reject the incentives application;
- Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;
- Conduct a Supplemental EIS for the entire STAMP site, taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;
- Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC, and the State Historic Preservation Office on those impacts.
- Conduct SEQR review that includes a detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that construction is forecast to take at least five years;
- Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;
- Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation. I live on the Tonawanda Band of Seneca Nation and am kitty corner to the stamp project. The noise is so loud that it blocks out the noise of the animals, birds and trees.

I DO NOT WANT THIS PROJECT TO GO FORWARD IN ANY WAY SHAPE OR FORM! ENOUGH DAMAGE HAS ALREADY BEEN CAUSED!

Sincerely,

Tara Sundown

Subject: FWW Comments onBUFA Project Double Reed Data Center

Dear Genesee County Economic Development Center (GCEDC),

My name is Alex Beauchamp, and I'm the Northern Region Director at Food & Water Watch. Food & Water Watch is a national environmental group, with a large presence throughout New York State.

We submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

The rapid expansion of data centers across New York and the country more broadly, driven by the AI and crypto boom, presents one of the biggest environmental and social challenges of our generation. Before the AI boom, fossil fuels were warming our climate to unsustainable levels, threatening our food, water, and public health. The AI-driven data center frenzy is like dousing a fire with gasoline. It is exponentially increasing demand for energy, increasing fossil fuel pollution, while at the same time straining our water resources and raising electricity prices across the country. Given this broader context, New York must take the necessary time and devote the resources needed to thoroughly evaluate this and all other proposed data center projects. Simply put: we cannot afford to rush this process.

Here in New York, our organization is committed to the just implementation of the Climate Leadership and Community Protection Act. The proposed data center lies within a Disadvantaged Community, as designated by the Climate Justice Working Group, which subjects this project to review under the CLCPA. Per Section 7(3) of the law, in considering and issuing permits, licenses, and other administrative approvals and decisions, all state agencies, offices, authorities, and divisions shall not disproportionately burden Disadvantaged Communities. Given the threats posed by this project to the Tonawanda Seneca Nation which lies within this Disadvantaged Community, and our overarching respect for Indigenous sovereignty, we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of NYS Department of Environmental Conservations' recommendations with respect to the SEQR environmental review process, and call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts;

5) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that construction is forecast to take at least five years;

6) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public; and

7) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed poses huge threats to the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation. It also threatens our Climate Law at a time when various state regulatory agencies are already signaling that the state is woefully behind on hitting the emissions reductions goals enshrined into law.

In closing: we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of DEC's recommendations with respect to the SEQR environmental review process, and call on GCEDC to reject the incentives application from STREAM US Data Centers.

Sincerely,
Alex Beauchamp

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

My objections go far beyond the fact that any entity that takes money from social programs to improve humanity to line the pockets of billionaires. This has proven to be the greatest threat to the US and the world. This agencies' wishes to continue to support this backward, proven failure of a policy leads me to wonder how deep does the corruption run! Even worse than the increased electric bills, the tax subsidies are directly forcing taxpayers to unwittingly, in most cases, finance their own enslavement. It would seem that nobody has even bothered to get to "know" what theses big tech oligarchs intentions are for the rest of us on this planet. Transhumanism is the end goal of this push toward all of these data centers.

These centers will continue to collect ALL data from ALL humans to feed into AI algorithms to train the future robots. People like Peter Thiel do not make any secret about the fact that they believe that humans are the problem that technology must solve. In other words, eventually, getting rid of humans is the objective. There are many works on the subject. Douglas Rushkoff is one author writing extensively on the subject. It is no coincidence that the tech oligarchs paid so much to elect so many public officials. It is also not surprising that one of the first things that was proposed was the passage of a law forbidding the Rights of the States to place any regulation on AI for a minimum of 10 years. It existentially imperative to stop and do your research on what is happening to all of us, and how badly things will be for all of us if we do not reverse course. Technology can be used for good, but just as the atomic bomb ultimately was used for destructive purposes, these data centers and AI technology are poised to deliver destruction instead of safety or security. The old adage, Look Before You Leap is very relevant here.

Sincerely,

Kimberly Donnelly

To: STREAMpublichearing@gcedc.com
Subject: STOP STREAM DATA

Hello everyone, my name is Gary Ciurczak, and I live in Buffalo. Thank you for the opportunity to provide you with my comments concerning the STREAM mega data center .

I am a bird watcher who is also a member of the Buffalo Ornithological Society, and a hiker who enjoys multiple trips to the Iroquois National Wildlife Refuge each year, one of the several wildlife refuge or management areas very close to STAMP land. Speaking for myself and many birders everywhere, I oppose the financial incentives request submitted by STREAM and Apollo for their proposed data center complex at STAMP. I urge GCEDC to follow all of NYS DEC's recommendations with respect to the SEQR environmental review process. I call on GCEDC to reject the incentives application from STREAM and Apollo.

Avian researchers have now learned that the specific types of noise generated by data centers have a profoundly negative effect on birds. According to Cornell Lab Nest Watch, with a study involving over 58,000 nests, paraphrasing:

When it comes to excess noise, forest-nesting birds laid a reduced number of eggs, had a higher likelihood of eggs failing, and experienced decreased nest success in the noisiest areas as compared to the quietest areas.

As it turns out, one of New York's vulnerable species of birds that nests, lives, and hunts throughout the area that would be used by STREAM is the Northern Saw-whet owl. It nests in cavities or nest boxes within mature coniferous or mixed forests. This project would take and use the habitat of this vulnerable species. The excess noise would be generated by the initial construction, planned to take about 4 years, and its continuing operation, planned to be 30 years. The complete list of endangered and vulnerable species in this area is too long to state here, but the following birds on the NY endangered list that are resident in this area are the Pied-billed grebe, Least bittern, Bald eagle, Northern harrier, King rail, Upland sandpiper, Red knot, Common tern, Least tern, Sedge wren, and Henslow's sparrow. As these and other yet unknown bird and animal species are affected and move out of the area, never to return, the very balance of nature becomes disrupted with unknown results. Is that a legacy that you want to leave to your children, grandchildren, and all your friends and neighbors affected by your decision?

I have also found out by reading STREAM's SEQR that each of the 190 proposed HVAC chiller units (think: giant air conditioners) produces substantial noise in the range of 65 dBs, and it also produces infrasonic sound (low frequency). When all working at the same time, which

they will be, 24 hours/day, 7 days/week, the noise produced is not 65 dBs, it is far greater than 65 dBs, due to the compounding nature of the noise. It would be over 87 dBs, according to https://noisetools.net/decibelcalculator , the website for a noise calculator. Humans perceive every 10 dB increase as a doubling of sound volume. Therefore, the increase of noise from 65 dBs to 75dBs would be **double** the sound listed as their maximum volume in the SEQR application. Then, the increase of sound from 75 dBs to 85 dBs would double the sound volume again. This means that the sound that is actually produced by STREAM is **four times as loud** as the sound listed in the SEQR application by STREAM. This means if you are holding the applicant to a limit of 65 dB of sound production, you must deny their application. Noise at this volume will disrupt the lives of people and wildlife within earshot (several miles). It's difficult for humans to tune out this noise, and Cornell Nestwatch has found infrasonic noise reduces nesting brood size and success among forest nesting birds. Several species of threatened and endangered birds, amphibians and mammals are found in the surrounding Big Woods and refuges.

Please join me in opposing this project any way you can.

With kind regards,

Gary Ciurczak

Dear Genesee County Economic Development Center (GCEDC),

My name is Dawn Wells-Clyburn and I'm the Executive Director at PUSH (People's United for Sustainable Housing) Buffalo. PUSH Buffalo is a members-based organization that fights to advance racial, economic, and environmental justice in Buffalo and New York State.

We submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

Our organization is committed to the just implementation of the Climate Leadership and Community Protection Act. The proposed data center lies within a Disadvantaged Community, as designated by the Climate Justice Working Group, which subjects this project to review under the CLCPA. Per Section 7(3) of the law, in considering and issuing permits, licenses, and other administrative approvals and decisions, all state agencies, offices, authorities, and divisions shall not disproportionately burden Disadvantaged Communities. Given the threats posed by this project to the Tonawanda Seneca Nation which lies within this Disadvantaged Community, and our overarching respect for Indigenous sovereignty, we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of NYS Department of Environmental Conservations' recommendations with respect to the SEQR environmental review process, and call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts;

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public; and

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Subject: Data Center

Maybe you've noticed that, nationally, people living with these data centers are regretting their ambivalence, and communities facing proposed data centers are fighting back. Maybe you've also noted that Congress is considering a bill calling for a data center moratorium. People have recognized good reasons NOT TO WANT THESE. I don't live in the community where this megawatt sucking monstrosity will be sited. But I will suffer the consequences as my utility costs go up to feed the thing. Frankly, I don't know what data this thing will crunch, but I have a strong suspicion its intent is more likely to screw me over than benefit me. Little do you economic developers care about the Orwellian society you're seeding by abetting these AI contraptions. That's probably too esoteric for this argument. Let's leave it- this boon for two communities will become a money pit for the rest of us. It's your ticket to a legacy much like those who abetted the Urban Renewal debacle; the data center will be your Genesee Country Mall. C. M. Barons, Bergen, NY

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Data Centers are harmful to people and the environment.

Sincerely,

Deborah Elliston

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I am strongly OPPOSED to the proposal for a data center in neighboring Genesee County, NY because it will negatively impact electric bills and water quality by driving up demand and increasing the consumption of unsustainable energy sources. Those profiting off the data center will receive tax breaks and thus will not contribute their fair share to the infrastructure that supports their data center, leaving those who live in surrounding areas holding the bag for the costs without reaping commensurate benefit. This is a bad deal for Genesee County and their neighbors in Wyoming County who will share the higher energy and water consumption costs.

Sincerely,

Willard Heller

Subject: I oppose data center

To whom this may concern:

I am very strongly opposed to the proposal for a data center in Genesee County NY because it will negatively affect my electric bills, my water quality, my quality of life and because the tax breaks a billion dollar company would get is truly outlandishly high! I AM OPPOSED!

Thanks.

Kathleen Zimmerman

Subject: Project Double Reed

GCEDC Board,

I'm writing in support of Project Double Reed as proposed, including the incentive package. I expect that the Board did their due diligence to offer this incentive package.
I attended the public hearing on March 19th for two and one half hours. I was dismayed during the public comments at the amount of misinformation, out of area speakers, and general overall behavior of the attendees and speakers, i.e., shouting down the GCEDC representatives when attempting to limit a speaker to 3 minutes, shouting down pro project speakers (intimidating other speakers who may be in favor of the project). This is typical behavior of a vocal minority. Whenever I hear the antis speak on proposed business projects, I can't help to think it's a good thing these likeminded N.I.M.B.Y people weren't around 50, 60, 70 or more years ago, we would have had no businesses, such as Graham's, Doehler, USG, Sylvania, etc. to employ people.
It is my hope that the GCEDC board does their due diligence on this project and moves forward for the good of Genesee County.

Thanks,
John R. Hilchey
Oakfield, NY

STAMP is located adjacent to the Iroquois National Wildlife Refuge. One of your tenants has already contaminated the Refuge. As National property, would you agree that the Refuge is effectively owned by the entire nation? What provision will be made to prevent your new tenant/data center from similarly contaminating the Refuge, including by light and noise pollution? In other words, why should Genesee County be permitted to bring a nuisance to the door of the entire Nation?

Sincerely,

Henry Gartner

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

streampublichearing@gcedc.com

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

This project is costly, wasteful and polluting. It exacerbates economic burdens on the public and promotes a technology that is unregulated and poorly controlled even by those who job it is to manage it. Allowing the construction of this data center under the current circumstances and at the proposed site would be an epic mistake.

Sincerely,

streampublichearing@gcedc.com

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

My name is Holly Rockwell. I am the Director of the Sisters of St. Joseph Office of Justice & Care for Creation, in Rochester NY and am here on behalf of that office to oppose the

incentives application from STREAM US Data Centers and Apollo Global Management because both justice and care for creation are lacking here.

First off, although we aren't entitled to know which corporation will be the ultimate tenant of this project—which says everything about the anti-democratic nature of this process--we know that STREAM's financial backer is Apollo Global Management--one of the world's largest private equity firms controlling hundreds of BILLIONS of dollars. As a creepy aside, we also know that Apollo was enmeshed with Jeffrey Epstein.

These entities do not need to extract enormous tax breaks from ordinary citizens. In fact, justice and human decency require otherwise, but their money gives them the clout to demand concessions and so they do. And GCEDC was clearly overmatched by these billionaires and their lawyers. This is just greed. A callous disregard for anything except profit. If it wasn't so harmful, I'd say it was kind of sad

This project does not consider the inherent value of the Earth, and all who live on it. All, as the Sisters would say, beloved. Nor does it consider what serves the greater good of the people of Western New York. Instead, local resources—money, air, water, and electricity will largely benefit a billion-dollar corporation. Their data center STREAM and Apollo builds will be here doing harm to the community, long after they have moved on.

What harm? First, we can't afford the kind of energy gluttony this project embodies—500 Megawatts is enough to power all of Metro Rochester--if we are to have any chance of addressing climate change or paying our own utility bills. At the Meeting, Mr. Masse told us that our rates won't go up because the utility had locked its rates in for the next two years. But this project won't be operational for 3 to 4 years. It is this kind of disingenuous talk that makes me suspicious. The data center's energy demands **are** going to cause our energy costs to rise—across the state.

Second, the data center's diesel back-up engines will spew pollutants including climate impacting greenhouse gases and benzene into the air. These chemicals will not be contained in Genesee County—they will rise and move across the area for all of us to take in.

Third, cooling the computers operating inside the data center will suck up a huge amount of water in a county that already faces water shortages. Where is the extra water needed going to come from? Where will it go?

Think! What is that going to mean for the people who live here? Who farm here? For the migrating birds who pause in the Iroquois Wildlife Refuge.

Here's the last harm I will mention. STREAM wants to build next to a complex of national and state wildlife preserves and the federally recognized lands of the Tonawanda Seneca. These places have a value that can't be measured in dollars and these money-mad billionaires at STREAM and Apollo don't recognize that. But we do. This is not the right location for this development.

This isn't the way we're meant to treat one another or the earth. It's not fair or just. Almost every faith tradition espouses the golden rule: Love your neighbors, human and otherwise, as you love yourself. I ask the members of the GCEDC board, and the STREAM representatives—would you like to live near this thing? Why do you think we should?

Speaking for the SSJ Office of Justice and Care for Creation, I say—shame on you.

Sincerely,

streampublichearing@gcedc.com

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Based on my personal experience over the past five years and what's transpired in North Tonawanda, NY with a crypto mining operation, there are several reasons why the proposed massive data center complex next to Tonawanda Seneca Nation is a horrible idea.

Data centers and bitcoin mining operations consume large amounts of energy -- to power servers and cooling systems. Many of them rely on fossil fuels which increase GHG and other harmful emissions.

They also use substantial amounts of water, create tons of electronic waste and generate constant high noise levels that can be disruptive to nearby neighborhoods.

Hundreds of North Tonawanda residents living within a mile of the DigiPower X crypto mining facility have suffered with increased emissions and 24/7 noise that disrupts sleep and negatively impacts property values. If your town doesn't have the proper zoning codes, noise control ordinance and other requirements to mitigate these problems, don't approve these types of projects until you do. I can tell you from firsthand experience that it's extremely time-consuming, costly and frustrating to address these issues after a facility is up and running.

The crypto mining operation that's been wreaking havoc in our city for more than four years is 65 MW. That pales in comparison to the issues that a 500 MW generative AI hyperscale data center would create. In addition, a data center at STAMP directly threatens the Nation’s way of life, its continued existence on its homelands, and its treaty rights.

Without state or national disclosure requirements, these types of projects are often approved without clear information. Large computing facilities dramatically increase electricity demand in communities where they operate. This can drive up power prices for households and small businesses and shift infrastructure costs onto local taxpayers. We deserve full transparency on this project.

I oppose having state tax dollars finance the data center developer, its private equity backer, and its Big Tech operator. $4.44 billion in taxpayer subsidies for 125 permanent jobs, equates to a per job cost of roughly $10 million. This proposed subsidy package ranks among the largest ever for a data center in the United States. That's a ridiculous waste of money.

Please think this all the way through. People have a right to clean air and water, and quiet communities. We also deserve affordable utilities and wise spending of our tax dollars.

Sincerely,

Deborah Q Gondek

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I have learned that GCEDC does not plan to hold additional hearings on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has set March 31 as the deadline for written comment on the data center proposal.

This is unacceptable. I demand:

- GCEDC must hold additional public hearings, at a range of times that accommodate people with varying schedules;
- The Board of Directors must be present at these hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal;
- GCEDC must upload the full, unedited videorecording of the March 19 public hearing as soon as possible;
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;
- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

This STAMP AI Data center proposal be accepted would discredit the native protected lands surrounding it. Also is an environmental disaster due to the out put of harmful factors that would play a role in the decline of all life forms in the surrounding area. Its a hazard to our Air, water,land, and the life habitats on the proposal land and surrounding lands. This can not be approved. Protect and respect Human life. The indigenous native lands should not be infringed upon as treaties and protection should be upheld for generations to come. Please consider the negative impact approving this plan would impose on life, and land. Thank you for hearing and your time and consideration.

Sincerely,

Erika Haig

- GCEDC must hold additional public hearings, at a range of times that accommodate people with varying schedules;
- The Board of Directors must be present at these hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal;
- GCEDC must upload the full, unedited videorecording of the March 19 public hearing as soon as possible;
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;
- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

The GCEDC calendar strategically erased the 19 Mar, 2026 public comment period from existence. There was so much opposition to the latest iteration of STAMP related corporate subsidies, that the meeting lasted over 5 hours. There is a need for extended public comment period.

Sincerely,

James Burnette

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

streampublichearing@gcedc.com

Subject: Comment from the Albany Unitarian Universalist Society Green Sanctuary Team
Attachments: STAMP Letter 1.docx

Good Morning,

Attached please find our comment requesting a complete environmental review of the proposed STAMP data center. Thank you for this opportunity to comment.

Chuck Manning, Chair Green Sanctuary Team

Dear Genesee County Economic Development Center (GCEDC),

My name is Charles Manning and I am the chair of the Green Sanctuary Team at the First Unitarian Universalist Society of Albany. The Green Sanctuary Team's goal is to preserve the global environment on which all life depends by working to make the Earth sustainable and by addressing climate change, consistent with our Unitarian Universalist 7th principle, which is respect for the interdependent web of all existence of which we are a part.

We submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

Our organization is committed to the just implementation of the Climate Leadership and Community Protection Act. The proposed data center lies within a Disadvantaged Community (the Tonawanda Seneca Nation), as designated by the Climate Justice Working Group, which subjects this project to review under the CLCPA. Per Section 7(3) of the law, in considering and issuing permits, licenses, and other administrative approvals and decisions, all state agencies, offices, authorities, and divisions shall not disproportionately burden Disadvantaged Communities. Given the threats posed by this project to the Tonawanda Seneca Nation and our overarching respect for Indigenous sovereignty, we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of NYS Department of Environmental Conservations' recommendations with respect to the SEQR environmental review process, and call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts;

5) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

6) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public; and

7) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

In closing: we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of DEC's recommendations with respect to the SEQR environmental review process, and call on GCEDC to reject the incentives application from STREAM US Data Centers.

Sincerely,

Charles Manning, Chair

First Unitarian Universalist Society of Albany Green Sanctuary Team

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Please explain how your office can justify giving money to data center projects which will only serv e to degrade the environment and devastate the local community with unsustainable utility bills. The only way that these things should ever even be considered is if they guarantee FREE electric and gas to local residents and their executives face criminal prosecution for failure to adhere to the guarantees.

Sincerely,

Andrea Sammarco

Subject:	GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I have learned that GCEDC does not plan to hold additional hearings on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has set March 31 as the deadline for written comment on the data center proposal.

This is unacceptable. I demand:

- GCEDC must hold additional public hearings, at a range of times that accommodate people with varying schedules;
- The Board of Directors must be present at these hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal;
- GCEDC must upload the full, unedited videorecording of the March 19 public hearing as soon as possible;
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;
- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

This is a short sighted plan that would cause dire consequences in both the immediate and long range future. Say NO to the proposed DATA center project!

Sincerely,

Patricia Smith

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Are you comfortable with the extensive capacity to store information about all of us. Independence is our right to be free of fear of constant monitoring. Freedom is becoming a moot point. Do not support this

Sincerely,

streampublichearing@gcedc.com

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I have learned that GCEDC does not plan to hold additional hearings on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has set March 31 as the deadline for written comment on the data center proposal.

This is unacceptable. I demand:

- GCEDC must hold additional public hearings, at a range of times that accommodate people with varying schedules;
- The Board of Directors must be present at these hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal;
- GCEDC must upload the full, unedited videorecording of the March 19 public hearing as soon as possible;
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;
- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

This STAMP data center sounds like a terrible idea! We need to respect the wishes of the Tonawanda-Seneca Nation. We must protect our land, water and air! This center would definitely have a negative impact on our environment. My opinion is NO!!!

Sincerely,

Julia Clayton

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

This data center will impinge on a wildlife area, as well as using an extreme amount of energy and water, none of which is necessary. The benefits to the GCEDC and the jobs provided are far outweighed by the detriments to our region. Say NO to this Monster Data Center.

Sincerely,

streampublichearing@gcedc.com

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I have learned that GCEDC does not plan to hold additional hearings on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has set March 31 as the deadline for written comment on the data center proposal.

This is unacceptable. I demand:

- GCEDC must hold additional public hearings, at a range of times that accommodate people with varying schedules;
- The Board of Directors must be present at these hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal;
- GCEDC must upload the full, unedited videorecording of the March 19 public hearing as soon as possible;
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;
- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

This appalling and anti-democratic process must slow down. The community has a right to have their concerns addressed, yet this whole project remains shrouded in secrecy. While GCEDC board members are not elected, you are appointed by those who are and MUST listen to the people

Sincerely,

Holly Rockwell

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

streampublichearing@gcedc.com

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I have learned that GCEDC does not plan to hold additional hearings on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has set March 31 as the deadline for written comment on the data center proposal.

This is unacceptable. I demand:

- GCEDC must hold additional public hearings, at a range of times that accommodate people with varying schedules;
- The Board of Directors must be present at these hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal;
- GCEDC must upload the full, unedited videorecording of the March 19 public hearing as soon as possible;
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;
- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

Sincerely,

Kim Aston

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

The GCEDC needs to heed the concerns of the residents of WNY, and especially the immediate neighbors of the proposed STAMP plant, the Tonawanda-Seneca Nation, about a project that threatens the local Alabama Swamps (that among its resources serves as part of a major North American bird migration), the natural preserves of the Ton-Seneca Nation, and the Great Lakes bioregion. In addition to the tragedy to the biodiversity and wetlands of this area, the proposed data center will consume a major percentage of power produced by Niagara Falls, and put tremendous pressure of available water and sewage treatment facilities that will affect the cost of power for all Western NYers. Despite what might

be attractive for some investors who want to get in at the ground level for maximum profits, AI is a technology that will profoundly affect the lives of all Americans and needs to be carefully considered before massive investments are made (by people seeking to profit from this new technology) that pose tremendous imbalances (natural resources, financial, social) to the places they will be located. I am a teacher and have first hand experience with the implications of AI for education, literacy, and culture. Please do not push through this project just because you can or are being courted and pressured by big tech interests. There are few jobs that will benefit this region and it's all about investors from afar. This is a major natural wonder of Western NY and this region. KEEP OUT! AI needs to be evaluated carefully before these investments are made.

Sincerely,

Christine Hill

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

The people of WNY obviously do not want or need continual work on a massive data center at the STAMP area; editorials and meetings everywhere show this. The fact that so many parts of the project have already stalled and failed is one indicator of its impracticality. The land at the proposed site of this data center will be of much greater long-term value to WNY if it is connected to the surrounding natural environmental areas and the Tonawanda-Seneca Nation. Then it would be serving NY State's 30 x 30 plan, instead of becoming an isolated spot of failure and industrial desolation within Genesee County and the state.

Sincerely,

Terrence Bisson

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I hike and recreate in Genesee County regularly with my family. I would be crushing to know that this data center was ruining some of that natural beauty and harming the people I know who live there. Worse yet, their tax dollars would be paying for it. AI is a racket and won't be bringing jobs anywhere. Don't get fooled by the scam of the month.

Sincerely,

Aidan Laubacher-Smith

Subject:	GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I have learned that GCEDC does not plan to hold additional hearings on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has set March 31 as the deadline for written comment on the data center proposal.

This is unacceptable. I demand:

- GCEDC must hold additional public hearings, at a range of times that accommodate people with varying schedules;
- The Board of Directors must be present at these hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal;
- GCEDC must upload the full, unedited videorecording of the March 19 public hearing as soon as possible;
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;
- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

The Stamp project is an absolutely horrible idea. It is NOT wanted by those it impacts the most. It is NOT wanted by those that understand the environmental impact it will have on the surrounding area and its natural wildlife and the ecosystem. These factors alone should stop this unhealthy and unnecessary project from moving forward.

Sincerely,

Barbara Lorango

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;
