Please see the attached written comments from Western New York Trout Unlimited on the proposed STREAM Data Center at the STAMP Complex.

Thank you for your consideration.

Western New York Chapter Trout Unlimited

March 26. 2026

Comments on the Proposed STREAM USA Project
Town of Alabama, Genesee County

Sent Via Email: streampublichearing@gcedc.com

Mark Masse, President & CEO
Genesee County Industrial Development Agency
d/b/a Genesee County Economic Development Center

Dear Mr. Masse - -

As the President of the Western New York Chapter of Trout Unlimited, I provide the following as the representative of approximately 600 members. We are writing today to affirm our strict opposition to the proposed STREAM USA Data Center at the STAMP complex in Genesee Couty. Our opposition is based on the following environmental impacts of the proposed facility:

- Water usage – The project would 20,000 gallons of water per day for sanitary processes and in a closed loop cooling system. We have not been able to learn the details regarding the disposal or discharge of this industrial effluent. The STAMP site lacks appropriate industrial wastewater treatment or discharge capacity.

- Impacts to Wetlands and Waterbodies and Stormwater Management - It appears that structures on the project site built adjacent to two regulated wetlands. The proposed design creates multiple large impoundments which will lead to the warming of surface waters through the ultimate discharge of stormwater from these basins. We are concerned that the discharge of this warm water will adversely affect aquatic resources in Tonawanda Creek.

- Power usage – The data center requires 500 MW of electricity / year, enough to power 410,000 residential homes and is a drain upon New York State's already over taxed electric grid. It is believed that this project will lead to increased air emissions and accelerating climate change and warming of the planet.

- Threatened and Endangered Species – We urge GEDC to ensure the protection of Rare, Threatened and Endangered Species at the entire STAMP site. Species like Heartleaf Plantain, Least Bittern, Short-eared owl, Northern Harrier, Bald Eagle, and Northern Long Eared Bat and their habitats should be afforded all appropriate protections.

Western New Trout Chapter of Trout Unlimited urges the GEDC to reconsider its support and massive subsidies for this facility.

Respectfully yours,

Joseph Morgan
Joseph Morgan, President
Western New York Chapter Trout Unlimited

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Sean Bates

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I have learned that GCEDC does not plan to hold additional hearings on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has set March 31 as the deadline for written comment on the data center proposal.

This is unacceptable. I demand:

- GCEDC must hold additional public hearings, at a range of times that accommodate people with varying schedules;
- The Board of Directors must be present at these hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal;
- GCEDC must upload the full, unedited videorecording of the March 19 public hearing as soon as possible;
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;
- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

Sincerely,

Kirk Scirto

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

My name is Kirk Scirto and I'm a family physician and public health specialist living in Buffalo. The proposed plan by STREAM US to build a 38-football field data center at STAMP would be immensely harmful to our health and well-being, and we can't allow it!

Their backup generators would burn an estimated 114,000 gallons of diesel fuel per year. The resulting air pollution would worsen asthma, allergies, emphysema, and heart disease for area residents, and these emissions would be worsened by all the traffic that this monster data center would draw. Burning this diesel fuel would also emit a substantial amount of carbon dioxide, and worsening global warming doesn't exactly help our health!

Short circuits in data centers cause fires, and with so much diesel fuel present, this could create an explosion. This would be a major risk for the Big Woods, local houses, and anyone breathing the air locally. And the Alabama Fire Department, I'm told, doesn't have the staff to contain such fires. Spills in diesel fuel could easily contaminate the land and water of the neighboring Tonawanda Seneca Nation (which uses well water).

The noise from data centers is also quite debilitating and it's a major cause of illness, especially given chronic exposure. Their nagging low-frequency hum prevents us from sleeping well, thereby increasing our risk of motor vehicle accidents and accidents at work. And our attention in school and work is affected, often leading to poor performance in both settings. Data center neighbors tend to feel constantly annoyed, and they unfairly suffer higher rates of depression, stress, anxiety, and social conflict.

People living near data centers commonly have chronic headaches, reduced hearing, and frequent ringing in the ears. Constant low frequency noise has also been proven to cause heart disease by increasing blood pressure, expanding inflammation, and even by building plaques in our arteries.

These health risks are unjust, and the electronic waste from data centers only add to them. Their servers and routers contain hazardous waste like mercury, lead, and cadmium so they'd be major risks if they were dumped locally. And as their immediate neighbor, the Nation would also be at risk for drinking water contamination from raw sewage. The same would be true for the Oakfield-Alabama School if GCEDC gets away with transporting raw sewage immediately next to it.

This gargantuan data center would steal the same amount of power that every house uses in the GLOW Region and the entire city of Rochester combined! This severe strain on the electric grid would likely result in blackouts exactly when local residents need power the most: A/C in the summer and heat in the winter. And the deepest risks would extend to those powering health-sustaining devices with electricity.

Public health also hinges on having access to jobs and income. If STREAM US is allowed at STAMP, then we can expect our electricity rates to increase markedly—as they commonly do in communities

victimized by data centers. I'd hardly expect many of the 125 jobs being offered to go to local residents, while the creation of enormous data centers like this would only further expand the ability of AI to take over many of the jobs of blue collar workers. This would only further hurt our economic security and public health, and why should we further encourage the AI bubble to grow and burst—only to crash our economy?

So, I oppose the ridiculous financial incentives requested by STREAM US Data Centers since these would actually harm taxpayers and take away their jobs. I demand that GCEDC follow all of DEC's recommendations, and I call on GCEDC to reject the incentives application from STREAM US Data Centers. This monster AI data center would be a monster threat to our health and well-being!

Sincerely,

Kirk Scirto

Governor Hochul, The STAMP project is WRONG for New York! The cost simply cannot be justified when the opportunity for jobs is so small and the subsequent harm to the surrounding community is so great. It will result in loss of public land, pollution of air and water, and destruction of wildlife habitat, and the land that belongs to the Seneca Nation. Please use your power to protect our citizens and prevent this project!

Sincerely,

- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;
- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

If you truly want to build what New Yorkers want and need, please give them the actual opportunity to provide feedback and make revisions reflecting what they say.

Sincerely,

Thomas W Boman

Subject: Data Center

Dear GCEDC:
Please stop the insanity and end the Data Center debacle at the STAMP site. It is clear that citizens do not want it. It is clear that citizens overwhelmingly believe that the negatives outweigh the positives on the project. I simply don't understand how you can ignore the will of the people. Do you think you know better? Do you not believe what the negative environmental impact will be?

Further, to have Mr. Masse complain to local media about getting nasty email, proves that you are not comprehending the depth of public sentiment on the project. You all created this situation so please don't complain that people are angry. What did you expect? From the beginning you have ignored the will of the people regarding STAMP. If the data center goes through it will decimate the ecosystem. You are threatening Native American life. How are people supposed to react when you are proposing to damage something sacred to people? How is it you can't understand that? Are you all so blinded by dollar signs that you can not comprehend the negative impact of this hideous project? Wake up!! Please!

There are not enough benefits of the project to outweigh the negatives. Please do the right thing. Please, for once admit you were mistaken, back out of the project and let residents of the TSN and Genesee County live unencumbered by a noisy, chemical monster.

Respectfully submitted,
Dorothy Avery,
Bergen NY

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Brandon McWhirter

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I have learned that GCEDC does not plan to hold additional hearings on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has set March 31 as the deadline for written comment on the data center proposal.

This is unacceptable. I demand:

- GCEDC must hold additional public hearings, at a range of times that accommodate people with varying schedules;
- The Board of Directors must be present at these hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal;
- GCEDC must upload the full, unedited videorecording of the March 19 public hearing as soon as possible;
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;
- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

Fuck all of you at GCEDC. I bet not one of you would vote to build this in your own backyard. You all need to be audited for taking money from the data center in order to shove this up the people of Basom/Alabama's ass

Sincerely,

Calvin webb

Subject: We say NO to the STAMP Data Center!!

Dear Genesee County Economic Development Center (GCEDC),

My name is Dayana Aziz and I'm the Program Director of the Teen Climate Justice Program at Sixth Street Community Center (SSCC). Since 1978, we at SSCC sustain its work as a longstanding grassroots community based organization to fight for climate, racial and environmental justice for a better, more equitable future for all.

We submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

Our organization is deeply committed to the just implementation of the Climate Leadership and Community Protection Act. The proposed data center lies within a Disadvantaged Community, as designated by the Climate Justice Working Group, which subjects this project to review under the CLCPA. Per Section 7(3) of the law, in considering and issuing permits, licenses, and other administrative approvals and decisions, all state agencies, offices, authorities, and divisions shall not disproportionately burden Disadvantaged Communities. Given the threats posed by this project to the Tonawanda Seneca Nation which lies within this Disadvantaged Community, and our overarching respect for Indigenous sovereignty, we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of NYS Department of Environmental Conservations' recommendations with respect to the SEQR environmental review process, and call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts;

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public; and

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation. It also threatens our Climate Law and violates the sovereignty and way of life of the Tonawanda Seneca Nation.

In closing: we are strongly opposed to the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of DEC's recommendations with respect to the SEQR environmental review process, and call on GCEDC to reject the incentives application from STREAM US Data Centers.

Best regards,
Dayana Aziz
Program Director
Sixth Street Community Center

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

The data center complex as proposed threatens the quality of life and well being of local communities. It also poses massive environmental risks for the Great Lakes Bioregion.

Sincerely,

Cathleen M Jeffers

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I have learned that GCEDC does not plan to hold additional hearings on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has set March 31 as the deadline for written comment on the data center proposal.

This is unacceptable. I demand:

- GCEDC must hold additional public hearings, at a range of times that accommodate people with varying schedules;
- The Board of Directors must be present at these hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal;
- GCEDC must upload the full, unedited videorecording of the March 19 public hearing as soon as possible;
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;
- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

*Data centers have a life span of 15-30 years. So incredibly small for such an enormous and costly project, it is irresponsible. There are better investment options,

Sincerely,

Rebecca LeFevre

Why were none of the board of directors at the public hearing? The video you posted of the hearing is extremely weird. The entire, unedited video needs posting.

Sincerely,

Alina Egolf

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I accept that the world is moving toward more AI and Data Centers. However, I believe that at this point in time, there is so much that local politicians do not understand. We need to plan for the infrastructure changes. We need to make plans to save the forests and the water that make New York a tourist attraction. While the money offered by these AI/Data Center builders is not taking into consideration, nor do they care about New York's water, forests, and land. Please reconsider your decision! The Tonawanda Seneca Nation is also a treasure for New York, which needs to be protected. This development will bring destruction to Genesee County's land, water, natural habitat, and the Tonawanda

Seneca Nation. I am asking you not to think only about the possible money, but instead to consider land, water, natural habitat, and the Tonawanda Secceca Nation, which is worth more than the STREAM US Data Center and Apollo Global Management could ever pay you.

Sincerely,

streampublichearing@gcedc.com

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

This boondoggle is a waste of state tax revenue; the small quantity of jobs in the middle of nowhere are not worth the negative impact on the Tonawanda Seneca Nation. Deed the property back to the reservation. They are better stewards of the land than any data center could be.

How would the data center protect water resources?
How would the data center protect endangered species?
How much damage would their waste stream create by simply installing the underground infrastructure?
How would the noise and pollution of diesel generators affect the indigenous community?

Please reject this data center.

Sincerely,

Margo B Moulin

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Gov.Hochul; Stop the madness at the STAMP plant in the town of Alabama. $1.46 billion in tax incentives is unheard of. That money could help make NY MORE AFFORDABLE to live in . This is an environmental nightmare mare. It needs to be shut down and S T O P P E D!!!!!!!!!!!!!!! Do the right thing and pull the plug on this MONSTER PLANT.

Thank you for doing the right thing.

Sincerely,

David Alton

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I have learned that GCEDC does not plan to hold additional hearings on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has set March 31 as the deadline for written comment on the data center proposal.

This is unacceptable. I demand:

- GCEDC must hold additional public hearings, at a range of times that accommodate people with varying schedules;
- The Board of Directors must be present at these hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal;
- GCEDC must upload the full, unedited videorecording of the March 19 public hearing as soon as possible;
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;
- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

It is shameful that you didn't show up for the community telling you NO they do not want their land poisoned, their electric bills to go up and air to by polluted by this nightmare of megasite

Sincerely,

Cyd Nova

From: Evelyn Wackett <even8r@yahoo.com>
Sent: Wednesday, March 25, 2026 5:15 PM
To: streampublichearing@gcedc.com
Subject: No data center public comment

My name is Evelyn Wackett, and I reside in Black Rock, Buffalo, NY.
I am submitting this comment as a New York State Certified Wildlife Rehabilitation Specialist that volunteers at the Erie County SPCA Wildlife Hospital.
I am here to voice critical concerns about the significant negative effects a massive data center at the STAMP site would have on local wildlife.
We are currently witnessing the planet's sixth mass extinction event making the preservation of biodiversity more critical than ever.
The area immediately surrounding the proposed STAMP site, encompassing the nearly 20,000-acre Iroquios National Wildlife Refuge, the Tonawanda and Oak Orchard Wildlife Management Areas, and the Tonawanda Seneca Nation's Big Woods serves as an indispensable QUIET REFUGE for numerous permanent and migratory species. This habitat is

vital for waterfowl for nesting, resting, and feeding during critical Spring and Fall migrations. The STAMP site itself is recognized as "occupied habitat" for several threatened and endangered species, many of which hold significant cultural importance to the Tonawanda Seneca and Haudenosaunee people. These include:

The Eastern Massasauga Snake
The Pie Billed Grebe
The Long Eared Bat
Sedge Wrens
The Northern Harrier Hawk
Cerulean Warblers
The Common Nighthawk
Bobolinks
The Monarch Butterfly

THE ENDANGERED SHORT EARED OWL (Asio Flammeus)

Let's examine the Short Eared Out specifically, a species particularly vulnerable to the proposed development.

The Short Eared Owl population in Western New York has reportedly decreased by over 30% since 2010 according to (Cornell Lab of Ornithology)

As a largely diurnal species, these owls depend on this specific wetland mosaic of upland forests, shrubland and grassland for hunting and nesting. They are ground nesters and rely acutely on their exceptional hearing and sight to detect prey.
Data centers are known to produce continuous low-frequency sound and ground vibrations,
As documented by (Business Insider -9/12/25)
These persistent disturbances are highly likely to significantly impair the Short Eared Owl's ability to hear prey and disrupt their essential / resting and nesting behaviors on the ground.
A few years ago, the SPCA successfully rehabilitated and released a Short Eared Owl into the Iroquois NWR.
Last year, leaving a public hearing at the Alabama Firehall, I had the profound experience of seeing a Short Eared Owl in the wild for the first time. This sighting solidified my conviction that we must continue to advocate fiercely for these creatures who cannot speak for themselves.
Approving a massive data center at STAMP, with the staggering figure of the $1.46 billion tax abatement package proposed by GCEDC and

Stream; the taxpayers, deserve a clear, transparent, and compelling justification for such an immense public subsidy. Is this truly a sound investment when weighed against the irreversible environmental degradation it will cause? This level of tax relief essentially shifts the financial burden onto local residents and small businesses, while enabling a project that directly undermines the ecological health of our region. We must demand accountability and a rigorous, independent cost-benefit analysis that includes the full environmental cost, not just projected gains for a private corporation.

We must prioritize the long-term health of our environment and its precious biodiversity over development that directly conflicts with established wildlife conservation goals.

Thank you for considering these vital concerns.

Sincerely,

Evelyn Wacket

"EeVeE

P.S. The connections between Apollo Global Management and Jeffery Epstein are highly

concerning. Do you want that kind of trashy reputation in your county?

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

My name is Evelyn Wackett, and I reside in Black Rock, Buffalo, NY.

I am submitting this comment as a New York State Certified Wildlife Rehabilitation Specialist that volunteers at the Erie County SPCA Wildlife Hospital.

I am here to voice critical concerns about the significant negative effects a massive data center at the STAMP site would have on local wildlife.

We are currently witnessing the planet's sixth mass extinction event making the preservation of biodiversity more critical than ever.

The area immediately surrounding the proposed STAMP site, encompassing the nearly 20,000-acre Iroquios National Wildlife Refuge, the Tonawanda and Oak Orchard Wildlife Management Areas, and the Tonawanda Seneca Nation's Big Woods serves as an indispensable QUIET REFUGE for numerous permanent and migratory species. This habitat is vital for waterfowl for nesting, resting, and feeding during critical Spring and Fall migrations.

The STAMP site itself is recognized as "occupied habitat" for several threatened and endangered species, many of which hold significant cultural

importance to the Tonawanda Seneca and Haudenosaunee people. These include:

The Eastern Massasauga Snake

The Pie Billed Grebe

The Long Eared Bat

Sedge Wrens

The Northern Harrier Hawk

Cerulean Warblers

The Common Nighthawk

Bobolinks

The Monarch Butterfly

THE ENDANGERED SHORT EARED OWL (Asio Flammeus)

Let's examine the Short Eared Out specifically, a species particularly vulnerable to the proposed development.

The Short Eared Owl population in Western New York has reportedly decreased by over 30% since 2010 according to (Cornell Lab of Ornithology)

As a largely diurnal species, these owls depend on this specific wetland mosaic of upland forests, shrubland and grassland for hunting and nesting.

They are ground nesters and rely acutely on their exceptional hearing and sight to detect prey.

Data centers are known to produce continuous low-frequency sound and ground vibrations,

As documented by (Business Insider -9/12/25)

These persistent disturbances are highly likely to significantly impair the Short Eared Owl's ability to hear prey and disrupt their essential / resting and nesting behaviors on the ground.

A few years ago, the SPCA successfully rehabilitated and released a Short Eared Owl into the Iroquois NWR.

Last year, leaving a public hearing at the Alabama Firehall, I had the profound experience of seeing a

Short Eared Owl in the wild for the first time. This sighting solidified my conviction that we must continue to advocate fiercely for these creatures who cannot speak for themselves.

Approving a massive data center at STAMP, with the staggering figure of the $1.46 billion tax abatement package proposed by GCEDC and Stream; the taxpayers, deserve a clear, transparent, and compelling justification for such an immense public subsidy. Is this truly a sound investment when weighed against the irreversible environmental degradation it will cause? This level of tax relief essentially shifts the financial burden onto local residents and small businesses, while enabling a project that directly undermines the ecological health of our region. We must demand accountability and a rigorous, independent cost-benefit analysis that includes the full environmental cost, not just projected gains for a private corporation.

We must prioritize the long-term health of our environment and its precious biodiversity over

development that directly conflicts with established wildlife conservation goals.

Thank you for considering these vital concerns.

Sincerely,

Evelyn Wacket

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I have learned that GCEDC does not plan to hold additional hearings on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has set March 31 as the deadline for written comment on the data center proposal.

This is unacceptable. I demand:

- GCEDC must hold additional public hearings, at a range of times that accommodate people with varying schedules;
- The Board of Directors must be present at these hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal;
- GCEDC must upload the full, unedited videorecording of the March 19 public hearing as soon as possible;
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;
- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

Dear Governor Kathy Hochul,

I am writing as a concerned resident of New York state to oppose the proposed data center complex at STAMP in the Town of Alabama, New York. I oppose the financial incentives request submitted by STREAM US Data Centers; I oppose the granting of SEQR Environmental Approvals for the project; and I oppose the allocation of additional NYS direct and indirect subsidies, as well as permits and approvals to STAMP. The entire mega industrial site is a failing boondoggle and must be rethought. The Governor must intervene immediately.

The nerve of GCEDC, Kathy Hochul, and Chuck Schumer to claim that they care about the environment and protecting the environment and continue to support the WNY STAMP project. Kathy said that she is an environmentalist. Liar!! The tax subsidies offered and already paid to this boondoggle of an idea to site a noisy, energy guzzling and water polluting monster data center is the

worst idea EVER!! Sean Ryan said the STAMP site is not large enough for a chip manufacturing facility. The original plan for STAMP was to provide 9,000 jobs. A data center would employ less than 100 people, on site!

The Iroquois National Wildlife Refuge was established to be a quiet “refuge” for migrating birds. The site is “occupied habitat” for several endangered and threatened species including, the short eared owl, the harrier hawk and the eastern massassauga snake, to name a few.
What about the eagles and the Monarch butterfly?
STOP STAMP. No data centers in our wetlands!!
Sincerely,

Evelyn Wackett

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I used to teach Organic Chemistry Laboratory at Rochester colleges. On the first day of class, I would deliver the following message: **THERE IS NO "AWAY"**. You can't throw something "away." Everything goes somewhere. If you throw a dangerous chemical down the sink, it winds up contaminating the wastewater stream. If you let it

evaporate in the fume hood, it winds up polluting the outside air. Everything goes somewhere.

Waste from the data center has to go somewhere. Right now the awkward, risky plan is to pump raw sewage from the STAMP site seven miles to Oakfield, where it will be treated and discharged into an already impaired Oak Orchard Creek. No treatment is perfect at removing pollutants, and the more complicated the treatment, the greater the risk of spills and errors. The plan appears to be to ignore risk and thus add more pollution to an already polluted waterway.

The Oak Orchard River ultimately flows through my community and into Lake Ontario. The river adds immeasurably to our quality of life, and it is critical to fishing, boating, and tourism in Orleans County, adding about $30 million of economic activity annually. It is one of the best sportfishing sites in North America. Additional pollution puts that at risk.

I represent the Oak Orchard Neighborhood Association, a group of about 100 community residents near Point Breeze. We are in favor of economic growth, provided that it is both smart and ethical. The proposed data center at STAMP is neither. Our members voted without a single dissenting vote to oppose a data center at STAMP.

The proposed data center is a bad idea for the people of western New York, for reasons that include but go well beyond environmental pollution.

We believe that it is incumbent on us, the current generation, to make decisions that future generations will be proud of. Therefore, we oppose the data center at the STAMP site.
Respectfully,
Dave Giacherio, Kent, NY

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I oppose Project BUFA Double Reed because of its serious threats to the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation." In addition, Leon Black, a founder of Apollo Global Management, is repeatedly in the Epstein files,

as is Marc Rowan, another founder and current excecutive. Let’s not reward their past choices with subsidies.

Sincerely,

Julie Damerell

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Rebecca Tillman

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I have learned that GCEDC does not plan to hold additional hearings on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has set March 31 as the deadline for written comment on the data center proposal.

This is unacceptable. I demand:

- GCEDC must hold additional public hearings, at a range of times that accommodate people with varying schedules;
- The Board of Directors must be present at these hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal;
- GCEDC must upload the full, unedited videorecording of the March 19 public hearing as soon as possible;
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;
- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

Sincerely,

Benjamin Lovell

From: John Keevert <jkeev101@gmail.com>
Sent: Wednesday, March 25, 2026 4:02 PM
To: streampublichearing@gcedc.com
Subject: Public Comment on STREAM US Data Centers' STAMP Data Center Complex

This contribution is from the Environmental Justice Ministry of First Unitarian Church of Rochester. The author, John Keevert is co-chair and also made a comment at the March 19th GCEDC hearing. We submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

As Unitarian-Universalists, we 'respect the interdependent web of existence of which we are a part.' A cursory look should convince all that the indigenous nations in NYS have done a better job at preserving the interdependent web of existence than those of us who came later, so it is incumbent on us to honor indigenous environmental knowledge and sovereignty. This particularly applies to the Tonawanda Seneca Nation (TSN) and the Science and Technology Advanced Manufacturing Park(STAMP) near Alabama, NY. From the earliest conception, the TSN have maintained that putting an industrial mega-site in a rural area bordered by wildlife refuges was totally inappropriate and a threat to their way of life. The sovereign Tonawanda Seneca Nation has been inadequately consulted with on this throughout the development of STAMP. We believe an industrial facility immediately adjacent to TSN territory violates the Nation's treaty-protected rights to free use and enjoyment of its Territory as delineated in the 1794 Treaty of Canandaigua. The TSN citizens maintain a traditional lifestyle that includes hunting, fishing and gathering vegetation and medicinals in this area of exceptional biodiversity. The proximity of an industrial facility clearly puts this lifestyle at risk, since 'accidents happen.' Risks include air and water pollution, already encountered with a spill of drilling fluid. The recently proposed hyperscale AI data center would bring 24/7 noise and light that very likely will drive wildlife far from the site. The low frequency noise of the proposed air-cooling systems is particularly intrusive. The massive amount of diesel fuel expected to be stored on-site presents particular fire and pollution risks, and the diesel backup generators will undoubtedly be tested regularly with concomitant air and noise pollution. The proposed 5-year construction time will bring an uncontrolled cacophony of industrial sounds that wildlife are unaccustomed to. Altogether this is a major intrusion on the Tonawanda Seneca Nation and a violation of the 1794 Treaty. Again white men are reneging on the original treaty promises, not actually stealing TSN land this time, but making it much less suitable for indigenous purposes. Unfortunately this is settler colonialism in action.

Other aspects of this proposal are also objectionable. There is growing opposition to large AI data centers in general. As we understand it, a major attraction of STAMP is the availability of low cost electrical power, either Niagara hydropower or power subsidized by NY Power Authority. It makes no economic sense now for NYPA to be offering power to data centers at rates less than one-fourth of what the average New York family pays for electricity (roughly 4 cents per kilowatt/hour vs 16 cents). We assume the justification for such use of public funds is to bring jobs, but the meager 125 jobs in no way justifies the 500 MW power needed. There is a strong correlation between data centers and spikes in electrical rates. Communities with high concentrations of data centers saw electricity prices jump 267 percent over the past five years, according to Consumer Reports . The large number of residents that

would be affected by rate increases certainly negates any benefit to the region from a few more jobs. Regarding jobs, Consumer Reports says "And in November 2025, two business school professors published research finding "no clear evidence that data centers stimulate local growth in tech employment."

It is our belief, and increasingly that of many others, that large AI data centers should be required to create their own power and it should be renewable, not fossil-fueled or nuclear. Also pending both at state and national levels is a moratorium on new data center. A November 2025 nationally representative survey (PDF) of 2,146 U.S. adults by Consumer Reports found that 78 percent of Americans are somewhat or very concerned that the new data centers being built across the country will make their energy bills go up. To keep up with the growing demand for power, electric utilities are spending billions to build new transmission lines and power plants. That's one of the main ways new data centers can drive up home electricity bills, says Ari Peskoe, director of Harvard Law School's Electricity Law Initiative and co-author of a March 2025 paper exploring how the public is funding Big Tech's power-intensive facilities. "Utilities are building infrastructure, and then we all pay for it because that's how the utility business model has always worked," he says. These harms have fueled massive grassroots opposition to AI data centers, with communities organizing to prevent construction in their backyards. One report estimates that between May 2024 and March 2025, local opposition helped tank or delay $64 billion worth of data center projects across the US.

The local sentiment should be evident since the GCEDC hearing on March 19th drew 200 people, lasted 5.5 hours, and of the approximately 100 speakers, only 2 supported STAMP data center.

The $1.44 B in subsidy/tax relief GCEDC is offering is an outstanding $11.7 M/job. The local Investigative Post calculated that employees would have to work for 122 years to earn the $11.7 million it cost to create their job. The Investigative Post continues "And the cost per job may be the most expensive in U.S. history, according to a review of available data by Investigative Post." This is not a record that a public agency like GCEDC should be striving for. We hope the $146M GCEDC will receive will not blind it to the unpopularity and many negative aspects of the proposed AI data center. While it remains a great idea to bring jobs to Genesee County, the proposed hyperscale AI data center and the STAMP project in general remain an inappropriate boondoggle that should be laid to rest.

Is Apollo Global Management or the undisclosed new owner really willing to invest $19B in a project that over the next 5 years faces a not-insignificant chance of being shut down?

Subject: SEQRA Comment - Noise Components

Mark,
We had submitted this section on Noise Components to the Town Planning Board in advance of their March 2, 2026 meeting. However, based on your recent comments about GHD's intent to review public comment, I wanted to assure you have these questions included in the official SEQRA response details. Thank you….Anne

Noise and Vibration:

The applicant (STREAM) has submitted a Noise Technical summary but has not provided the full acoustic study required to evaluate compliance with Town Zoning Law Sections 505/507 and the cumulative noise limits established in the STAMP GEIS and 2012 Findings Statement. The application is therefore incomplete.

1. Across federal agencies, NYSDEC guidance, international standards, and case law, low-frequency sound is recognized as both an acoustic impact and a vibration impact. STREAM's submission relies solely on A-weighted decibels (dBA), which exclude low- frequency and vibration impacts.

   Section 808 of the Town Zoning Law outlines the process for reviewing STAMP applications, but it does not contain any performance standards for noise or vibration. The Town Zoning Law's only explicit noise and vibration standard appears in Sections 505 and 507, as stated below:
   "Neighborhood Character - The appearance of the structure shall not be altered and the business shall not be conducted in a manner that would cause the premises to differ from its existing residential/ agricultural character, either by colors, material, construction, lighting, signs, ***or emission of sounds, noises or vibrations****."*
   Questions:

- **Is there a section of the Technology District regulations or Section 808 where those noise and vibration performance standards have been waived or replaced?**
- **Without a waiver, will the applicant be required to complete additional analysis or low-frequency noise assessment to address the Town's prohibition on the emission of "sounds, noises or vibrations."**
- **As requested in G. Bacon's 2/22/2026 email, will the town be updating its noise study to provide an appropriate baseline to measure this again**

2. The D/FGEIS and 2012 Findings Statement established cumulative noise limits of 65 dBA (daytime) and 45 dBA (nighttime) at the STAMP boundary. Given these boundary-based limits:

- STREAM cannot assume the full 65/45 dBA thresholds apply solely to its operations. Existing and foreseeable noise sources at STAMP, including Edwards, Plug Power, traffic, and other site activities, should be included in a cumulative analysis.
- Within STREAM's noise study the applicant did not provide cumulative impact from all of their equipment (e.g., noise projection for one chiller was provided, not the total # chillers, generators, etc.)
- NYS DEC has noted that the GEIS did not evaluate noise from 24-hour industrial operations comparable to the scale and nature of the proposed data center.

Question: Can the applicant ensure that all environmental impacts beyond the GEIS — including full project level equipment and STAMP-site accumulations, low-frequency noise, vibration, and 24-hour operational noise — are fully described, modeled, mitigated, and controlled?

3. STREAM's application shows generators located on the northern side of the buildings, closest to nearby residences.

Question: Can the applicant explain why these noise-producing components are not sited toward the interior of the STAMP site or away from nearby community members?

4. The applicant's SEQR questionnaire identifies nearby wildlife conservation areas (e.g., John White and Iroquois Wildlife Refuge) but does not include any expert review of potential indirect impacts.

Question: Can the applicant provide technical evaluations — including noise, vibration, and lighting — reviewed by qualified environmental experts or relevant agencies, such as NYS DEC or USFWS?

5. STREAM's application states only that construction will occur "during normal business hours," and the February 18, 2026 response document adds that noise will be minimized by "restricting work to approved daytime hours."

No construction hours are defined.

Question: Can the applicant specify the proposed construction hours and provide a construction-phase noise, vibration, and traffic analysis consistent with those hours? This is critically important because the scope of construction is a multi-year, 1,000-worker project that will generate significant noise, vibration, dust, and traffic.

Subject: Data Center Project

I am a Genesse County resident and concerned regarding the Project Double Reed project. Spending $800 million in tax dollars / abatements seems totally unreasonable to me. This is only expected to generate 125 new long-term jobs. It will also burden the electrical system and re-route cost effective and clean hydropower which should rightfully be provided to consumers and projects employing hundreds or thousands of people not 125. While this project would have some benefit, the offer of $800 million is not worth it in my opinion. A more downsized approach might be acceptable leaving more room for alternative projects with more hiring potential. With regard to the noise generated from this project, it will require many backup generators (usually diesel) which must run periodically to be tested. I believe that for a 2 million sq ft. facility, it will likely create some significant noise and I'm sure your testing will bear that out. I am a believer in progress, but it needs to be well managed for the good of all residents in the County and State of NY. Since this project is supposedly for one client, there are only a few large enough to fund this project. I think they can probably fund more of this project themselves and I would suggest you lower any offers you make to the builder accordingly. Those are my opinions and that is my input.
Best Regards,
Gregg Weinman
LeRoy, NY

   - **As requested in G. Bacon's 2/22/2026 email, will the town be updating its noise study to provide an appropriate baseline to measure this again**

2. The D/FGEIS and 2012 Findings Statement established cumulative noise limits of 65 dBA (daytime) and 45 dBA (nighttime) at the STAMP boundary. Given these boundary-based limits:

- STREAM cannot assume the full 65/45 dBA thresholds apply solely to its operations. Existing and foreseeable noise sources at STAMP, including Edwards, Plug Power, traffic, and other site activities, should be included in a cumulative analysis.
- Within STREAM's noise study the applicant did not provide cumulative impact from all of their equipment (e.g., noise projection for one chiller was provided, not the total # chillers, generators, etc.)
- NYS DEC has noted that the GEIS did not evaluate noise from 24-hour industrial operations comparable to the scale and nature of the proposed data center.

Question: Can the applicant ensure that all environmental impacts beyond the GEIS — including full project level equipment and STAMP-site accumulations, low-frequency noise, vibration, and 24-hour operational noise — are fully described, modeled, mitigated, and controlled?

3. STREAM's application shows generators located on the northern side of the buildings, closest to nearby residences.

Question: Can the applicant explain why these noise-producing components are not sited toward the interior of the STAMP site or away from nearby community members?

4. The applicant's SEQR questionnaire identifies nearby wildlife conservation areas (e.g., John White and Iroquois Wildlife Refuge) but does not include any expert review of potential indirect impacts.

Question: Can the applicant provide technical evaluations — including noise, vibration, and lighting — reviewed by qualified environmental experts or relevant agencies, such as NYS DEC or USFWS?

5. STREAM's application states only that construction will occur "during normal business hours," and the February 18, 2026 response document adds that noise will be minimized by "restricting work to approved daytime hours."

No construction hours are defined.

Question: Can the applicant specify the proposed construction hours and provide a construction-phase noise, vibration, and traffic analysis consistent with those hours? This is critically important because the scope of construction is a multi-year, 1,000-worker project that will generate significant noise, vibration, dust, and traffic.

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I am totally against the STAMP Mega Industrial Site. It is unfair and violates the sovereignty of the Tonawanda Seneca Nation and It would be a total environmental disaster for New York State. I am proud to be a New Yorker and we need to keep the air, soil and water of or beautiful state clean and clear.

Sincerely,

julia Clayton

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I feel that the GCEDC should wait until the State lawmakers decide to implement the moratorium for three years so they can study the environmental and financial impact that a Data Center can have in NY State. Let it be known that Governor Hochul has stated that Data centers should pay their share for taxes and power and Buffalo Mayor Ryan has stated that incentives don't work, companies getting incentives tend to leave after the incentives expire leaving empty buildings for the communities to take care of. It appears that the GCEDC is trying to speed up the process to try to get this Data Center approved to beat

the possibility of a moratorium on Data Centers being built in the state. This is not a good legacy to leave behind.

Sincerely,

streampublichearing@gcedc.com

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

The data center complex, proposed by STREAM US Data Centers and Apollo Global Management, threatens the quality of life, well-being, and cost of living of local communities.

It also violates the sovereignty and way of life of the Tonawanda Seneca Nation, and poses massive social and environmental risks for all of New York state and the Great Lakes Bioregion!

Sincerely,

Flor Saldivar

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I have learned that GCEDC does not plan to hold additional hearings on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has set March 31 as the deadline for written comment on the data center proposal.

This is unacceptable. I demand:

- GCEDC must hold additional public hearings, at a range of times that accommodate people with varying schedules;
- The Board of Directors must be present at these hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal;
- GCEDC must upload the full, unedited videorecording of the March 19 public hearing as soon as possible;
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;
- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

Wow! How about posting an honest video of the March 19th public hearing! The people of Genesee County do not want a data center built at that location or anywhere else in the county.

Sincerely,

Janice W. laben

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Emily Sachs

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I am writing with concern about the environmental impacts of the proposed data center. I urge the Town Board to not approve a data center to protect the local environment and not drive energy bills up for residents. Thank you.

Sincerely,

Herber Banda

Subject:	SEQRA Comment - Request Extension of Public Question/Comment Timeframe

Good morning. I just read the Batavia Daily article noting that the transcript of the public hearing will not be available for a week or so. Given the poor quality of the posted audio and the fact that only a fraction of the 4½-hour hearing was captured, it seems only fair to extend the public comment period.

Without access to the full transcript, residents cannot understand the full range of questions and concerns raised, nor determine whether they have additional comments aligned with or in response to those points.

I respectfully request that the public comment period be extended to at least two weeks after the transcript becomes available. Thank you. ...Anne

Subject: No data center

I want to voice my concerns over the proposed Data center in Alabama. I see no benefit from having a data center. I haven't seen any positive comments from people living near existing data centers.

It took quite a while for the GCEDC to realize the damage being done by the solar companies is irreversible. I question how they can back another controversial project like a data center? I don't want our natural resources being exploited by a data center. Our hydroelectric power and water resources should be conserved.

Please do not approve the data center. Thank you, Scott A Wooton

Sent: Wednesday, March 25, 2026 9:31 AM
To: streampublichearing@gcedc.com
Subject: Reject the incentives application from STREAM US Data Centers

Dear Genesee County Economic Development Center (GCEDC),

My name is Laurel Tumarkin, and I'm the Policy Director at Climate Families, a parent-led movement of more than 2,500 families across New York City and Westchester County. We organize for city and state climate solutions, a clean energy transition, and a livable future for New York's children.

We submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

Our organization is committed to the just implementation of the Climate Leadership and Community Protection Act. The proposed data center lies within a Disadvantaged Community, as designated by the Climate Justice Working Group, which subjects this project to review under the CLCPA. Per Section 7(3) of the law, in considering and issuing permits, licenses, and other administrative approvals and decisions, all state agencies, offices, authorities, and divisions shall not disproportionately burden Disadvantaged Communities. Given the threats posed by this project to the Tonawanda Seneca Nation, which lies within this Disadvantaged Community, and our overarching respect for Indigenous sovereignty, we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of NYS Department of Environmental Conservation's recommendations with respect to the SEQR environmental review process, and call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site, taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC, and the State Historic Preservation Office on those impacts;

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that construction is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public; and

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York State, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation. It also threatens our Climate Law and violates the sovereignty and way of life of the Tonawanda Seneca Nation.

In closing, we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of DEC's recommendations with respect to the SEQR environmental review process, and call on GCEDC to reject the incentives application from STREAM US Data Centers.

Sincerely,
Laurel Tumarkin
Policy Director
Climate Families NYC

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I have learned that GCEDC does not plan to hold additional hearings on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has set March 31 as the deadline for written comment on the data center proposal.

This is unacceptable. I demand:

- GCEDC must hold additional public hearings, at a range of times that accommodate people with varying schedules;
- The Board of Directors must be present at these hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal;
- GCEDC must upload the full, unedited videorecording of the March 19 public hearing as soon as possible;
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;
- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

MARK MASSE NEEDS TO RESIGN. This is a disgusting use of taxpayer dollars to ruin a very important ecosystem to a very marginalized people that have already undergone so much genocide and cultural displacement - why are you so driven to ruin their home? What's the matter with you?

Sincerely,

Karlie Jones

To: streampublichearing@gcedc.com
Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

My understanding is that these data centers are a huge drain on our resources causing electricity bills to skyrocket while also creating noise pollution for local communities. They also do not create jobs and even if they did, the trade off is too great. These AI companies are making a fortune. We need to hit pause and think about all of the implications.

Sincerely,

Eileen Jarrett

To the GCEDC:

You KNOW the communities in Genesee County do not want this. Please stop pursing the data center at the STAMP site. It is so obviously clear that you are pursuing this not for the greater good of Genesee County residents but for short-term gain. I am appalled that you are ignoring the comments from the public hearing and trying to manipulate this scenario. Do the right thing and do not pursue this awful data center which will do nothing but ruin our fragile ecosystem, trample over Native American heritage, and ruin your personal reputations. I wonder how it feels to have your neighbors hate you and view you as the enemy. You can be viewed as heros if you pull out of this thing, or you can be viewed as the enemy. Please do what is right and pull out of this awful data center mess. Leave the Tonawanda Seneca nation alone and preserve the beauty that surrounds our community. Dorothy Avery, Bergen

Sincerely,

Dorothy Avery

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I have learned that GCEDC does not plan to hold additional hearings on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has set March 31 as the deadline for written comment on the data center proposal.

This is unacceptable. I demand:

- GCEDC must hold additional public hearings, at a range of times that accommodate people with varying schedules;
- The Board of Directors must be present at these hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal;
- GCEDC must upload the full, unedited videorecording of the March 19 public hearing as soon as possible;
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;
- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

To Those Concerned:

I ask as a permanent resident of Genessee County and member of the Tonawanda Seneca I ask that you be honest when presented the meeting to the republic. By building a monstrosity center that will do more harm than good to our community and lands for future generations then your deep pockets could ever fix I ask that you listen to the many voices that shared their concerns.
Be honest as to what the community has shared rather than skewing and brushing over the public's opinion. I agree with the following requests:

-
- GCEDC must hold additional public hearings, at a range of times that accommodate people with varying schedules;
- The Board of Directors must be present at these hearings;

- GCEDC and STREAM must publicly answer questions from the public about the data center proposal;
- GCEDC must upload the full, unedited videorecording of the March 19 public hearing asap;
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;
- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

Please forward these comments to GCEDC, The Alabama Town Board,Wendell, and Stream Data and to be included in the SEQR

Question 1.
What is the projected db level of the site at on the roof top before the sound reaches the sound barriers?

Question 2.
Do the sound studies reflect that there will be three buildings emitting sound?

Question 3. Do the sound studies reflect that the sound source is 50 feet high?

Question 4. What is the height the sound barriers and do they function as deflectors or are they for absorption? What are the materials used in the barriers? Will they create a sound shadow at the property line but allow sound to be elevated at a farther distance? Could it be that the property line be the quietest point?

Please just look at the site drawings where Stream Data shows the rooftop, the 60 chillers, and the sound barriers of a single center: The chillers are almost as tall as the barriers, and sit in the middle of the 300 foot wide concrete topped building. It is my humble opinion, that the barriers will do little to control sound other than to minimize sound only at the property line, those living father away will hear the full effect.

Question 5.
How's does temperature inversions and wind direction affect the noise heard in the community?

Weather plays a major role in how sound will be transmitted into the neighboring community. Temperature inversions significantly affect sound transmission. Temperature

inversions often occur at 40% of the time in our area. This coupled with prevailing wind placing the majority of residence downwind from the data source make the Stream sound study suspect as it doesn't reference variations in temperature inversions, or wind direction.

Temperature inversions reflect sound downward. Thereby often defeating the 10 foot high sound barriers: As the sound goes up over the barriers, it will then be reflected downward, and downwind, toward the community. This, even if the barriers are made to absorb sound.

> "These conditions typically increase noise levels by 5dB to 10dB and have been known to increase levels by as much as 20dB. Temperature inversions occur within the lowest 50m to 100m of the atmosphere, hence can affect noise level measurements on local ground level. Temperature inversions are most commonly caused by radiative cooling of the ground at night, leading to the cooling of the air in contact with the ground; this is especially prevalent on cloudless nights with little wind. " https://www.acoustics.org.nz/

Comment:
We need to know the actual db level of each rooftop, and how, when multiplied by the number of massive buildings, what will be noise heard at the residents homes within two miles. These data centers will be as loud as the thruway, and while the db levels at over a mile may fall within the town's regulation, the roar will be heard. It may be background but it will be distinguishable and be heard. It will not subside; it is 24 hours, 7 days a week, even if Stream says it will be downsized at night, that is when sound travels the loudest, and it will be heard.

I believe it is best to think of the Data Center, in terms of sound, as a 24 hour thruway placed in our community. It will degrade the quality of life within its considerable earshot, and therefore needs to be rejected.

My concerns to be forwarded are as follows:

Please note that I have submitted many questions and concerns. While some may seem small, this is an extremely large project and every emission or potential nuisance could equally be extremely large.

1. What is the embodied carbon footprint of the proposed data center? i.e. concrete, electronic hardware; the chillers, wiring, parking lot, construction operation, etc.

2. What are the plans for recycling or reclaiming of the electronic equipment, including the chillers, as they become retired?

3. What efforts are going to made to mitigate noise pollution on the community during the construction phase. Hours of operation, noise free days, noise free hours, electric vs diesel construction equipment.

4. What toxic chemicals will be onsite, and how much, either in storage or embedded in the infrastructure. i.e. PFAS, PFOS, mercury, oils, fuels, nitrogen oxide, formaldehydes, glycol, corrosion inhibitors, fire retardants, bromides, benzenes, others.

5. What efforts will be made to safeguard the environment from being exposed to any toxic materials on the site.

6. If there is a request by grid operators to reduce power consumption due to a stressed grid, what will the Data Centers obligation and response? How long will it take for the Center to reduce consumption?

7. What are the plans for decommissioning of the center and the associated costs? Will the owner be bonded for the Center's decommissioning.

8. What pollution and emissions will be released during the testing of the diesel backup system? How often will tests be made? What are the emissions per hour when being used as backup to the Center.

9. How much heat will be transferred into the environment from the cooling operation, How hot will the air on the roof top get? and will “Heat Islands” be created, and wildlife affected.?

10. How often will the operators of the Center have scheduled open community meetings?

11. Describe the maintenance procedures for the rooftop chillers; coolants and lubricants? The chemical nature of the coolant? How often the coolant is exchanged? What happens to the used coolants?

12. What are kWh per hour breakdown of the elecronic infrastructure? The chillers? during peak operating? Nightime? Summer vs. winter?

Thank you for your time and attention to these concerns

Andrew Goldstein

Town Board of Alabama, NY

Questions Concerning Construction of Stream Data

Please forward these comments to GCEDC, The Alabama Town Board, Wendell, and Stream Data and to be included in the SEQR

The construction of Stream Data should not be placed on the back burner of whether or not to approve the proposal. Just as noise emanating from the chillers is of great importance to the center's merits to our community, so should the noise and nuisances of construction be examined before any approval is given.

Construction, and all its nuisances, will be pervasive and significant throughout the five years of implementation. It may also be seven days a week, and may be up to ten hours a day. The nuisances will emanate not only from the site itself, but from the roadways bisecting our town and county.

No doubt, there will be loads of concrete to be poured and foundations needing great excavation work. Noise and air and water pollution will need to be controlled for extended days, months and years of this 3 billion dollar project.

This project demands construction plans be presented to all agencies, as they relate to a proper environmental impact review:

- Detailed Project Description: A comprehensive overview including all logically connected actions, such as site access roads, staging areas, and excavation limits.

- Site and Environmental Analysis: Surveys of existing conditions, including wetlands, floodplains, historic sites, and air quality.
- Impact Mitigation Strategies: Strategies to address impacts, such as erosion control, noise management, and dust control plans.
- Regulatory Compliance & Permits:Documentation of compliance with local, state, and federal laws (e.g., Endangered Species Act, Clean Water Act).
- Alternatives Evaluation: Analysis of different project alternatives that could achieve the same goal with fewer environmental impacts.
- Public Notice and Comment: Opportunities for community input on the proposed construction activity.

Levels of review, such as Environmental Assessment (EA) or Environmental Impact Statement (EIS), are determined based on the severity of impacts, with major construction typically requiring more extensive assessments.

The project's construction description should include, but not limited to the following:

1. Will the foundation of the buildings require pillions to be installed? How many per building? The level of sound the pounding of pillions will make, and the distance it will be felt? Might the pillion pounding cause structural damage to surrounding structures? Number of days, the days of the week, and hours in any particular day, that pound will take place? What mitigation procedures will be implemented.

2. The number and types of construction machinery and trucks that will present during the construction. How loud each equipment and hours of operation? And what air pollution will be created during construction. What mitigation procedures will be implemented.

3. The number and types of trucks that will be on our roads during construction. Again, assessing all nuisances that will arise from such equipment on roads bisecting our community. What mitigation procedures will be implemented.

4. Will storm water runoff be contained during construction; how and with what safeguards during potential flooding events.

The benefit of this project to the community, needs to be weighed against the negative effects of one of the largest construction projects ever proposed in upstate New York. And because of the immensity of construction in scope and duration, such an assessment needs to occur before any approvals are to be given.

I expect to read responses to the above in the SEQRA review.

Subject: STREAM US Data Centers LLC Public Hearing, carbon offsets

The operation of the data center will require tapping into 500 megawatts of the NYS power grid with estimates of producing some 400,000 tonnes of CO2 emissions annually.

Please provide an estimate of the annual tons of CO2 emissions the center will produce once the operations are underway, per year through completion.

Please provide carbon emission equivalents embodied in the completed center, including but not limited to, such items as concrete, construction operation, transportation, and electrical/server components.

Please provide any attempts to purchase or provide services that would mitigate carbon emissions. i.e. carbon offsets, forestation efforts, carbon sequestering, etc..

I would propose $10,000,000 annually be given to urban tree planting programs in NYS, as well as wildlife and wetland protection programs.

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Communities around the nation are rejecting these extractive data centers, which drive up energy rates for their neighbors, cause noise pollution, and use massive amounts of fresh, drinkable water. Don't ruin the rural character and economy of the western tier!

Sincerely,

Marvin Warren

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I have learned that GCEDC does not plan to hold additional hearings on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has set March 31 as the deadline for written comment on the data center proposal.

This is unacceptable. I demand:

- GCEDC must hold additional public hearings, at a range of times that accommodate people with varying schedules;
- The Board of Directors must be present at these hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal;
- GCEDC must upload the full, unedited videorecording of the March 19 public hearing as soon as possible;
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;
- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

I live on the Alabama/Akron line. I am 100% against a data center being built on route 77. The negative impacts and the risks to the environment do not out weigh the benefits.

Anyone with a conscience should feel it in their gut that this should NOT be allowed to go forward. Please follow your gut!
I share all the same concerns for the environmental impact that has been expressed. From the wildlife, to the water, to the air, to the noise… the list goes on for what will be affected.
Once the damage is done that's it. The impact will not be reversed. What are we leaving our children!?
Genesee county was once a place people moved to for the open spaces- the quiet, the environment. And now if this continues this once admirable county will be on its way to bedlam.
When we moved out here from Lockport- friends and family said "Genesee county- that's a good place. Taxes are good and it's far enough away from everything to have quiet."
Now this county will become a disappointment.

Please! Please! STOP the DATA center. And going forward please don’t allow anything else that takes away from what brought us to this county.
Sincerely,
Concerned resident
Jessica Cena

Sincerely,

Jessica Cena

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Janice Nelson-Wells

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I have learned that GCEDC does not plan to hold additional hearings on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has set March 31 as the deadline for written comment on the data center proposal.

This is unacceptable. I demand:

- GCEDC must hold additional public hearings, at a range of times that accommodate people with varying schedules;
- The Board of Directors must be present at these hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal;
- GCEDC must upload the full, unedited videorecording of the March 19 public hearing as soon as possible;
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;
- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

I have concerns for the impact on wildlife in that area especially the endangered species

Sincerely,

Susie Mott

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Please do not support having a data center.

Sincerely,

streampublichearing@gcedc.com

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I have learned that GCEDC does not plan to hold additional hearings on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has set March 31 as the deadline for written comment on the data center proposal.

This is unacceptable. I demand:

- GCEDC must hold additional public hearings, at a range of times that accommodate people with varying schedules;
- The Board of Directors must be present at these hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal;
- GCEDC must upload the full, unedited videorecording of the March 19 public hearing as soon as possible;
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;
- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

Sincerely,

Alyssa Beuler

Subject: Stop the Data Center

Dear Genesee County Economic Development Center (GCEDC),

My name is Anna Castonguay and I'm the co-chair of the Western New York Environmental Alliance (WNYEA). WNYEA has spent the past 18 years convening groups across Western New York to ensure that the environment is taken into account in local and regional decision-making.

We submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

Our organization is committed to the just implementation of the Climate Leadership and Community Protection Act. The proposed data center lies within a Disadvantaged Community, as designated by the Climate Justice Working Group, which subjects this project to review under the CLCPA. Per Section 7(3) of the law, in considering and issuing permits, licenses, and other administrative approvals and decisions, all state agencies, offices, authorities, and divisions shall not disproportionately burden Disadvantaged Communities. Given the threats posed by this project to the Tonawanda Seneca Nation which lies within this Disadvantaged Community, and our overarching respect for Indigenous sovereignty, we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of NYS Department of Environmental Conservations' recommendations with respect to the SEQR environmental review process, and call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts;

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public; and

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of

the Tonawanda Seneca Nation. It also threatens our Climate Law and violates the sovereignty and way of life of the Tonawanda Seneca Nation.

In closing: we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of DEC's recommendations with respect to the SEQR environmental review process, and call on GCEDC to reject the incentives application from STREAM US Data Centers.

Sincerely,
Anna Castonguay
Western New York Environmental Alliance

- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

This is infringing on our fellow indigenous people's peace treaty. The ripple effects of this decision go far beyond the short sightedness of an AI data center. The benefits do not outweigh the cost, no matter what angle you spin it. This is a cowardly and money hungry decision hidden behind lies and outrageous exaggeration of "job creation."

- GCEDC must hold additional public hearings, at a range of times that accommodate people with varying schedules;
- The Board of Directors must be present at these hearings; COWARDS
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal; AGAIN, cowards for not doing so already
- GCEDC must upload the full, unedited videorecording of the March 19 public hearing asap;

- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;
- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met

You are covering this as a “democratic decision”, like the people’s voice really counts but then avoiding all chances and opportunities to hear the people. Don’t pretend to listen and then just do what you want. It’s beyond money. Haven’t we already done enough to our indigenous friends. Why take more from them, why take more from the surrounding areas and rural families. Money doesn’t lie and the greed of this nation and their decisions is heartbreaking on every account.

Sincerely,

Lisa Dojnik

To Whom it May Concern,

Please see GreenFaith's attached letter in response to the proposed data center next to Tonawanda Seneca Nation.

Thank you,
Rev. Chelsea MacMillan

Rev. Chelsea MacMillan (she/they)
Senior Organizer, GreenFaith
Lenapehoking (Brooklyn, NY)
www.greenfaith.org

Dear Genesee County Economic Development Center (GCEDC),

My name is Rev. Chelsea MacMillan and I'm the Senior Organizer of GreenFaith, a global interfaith movement for climate justice.

We submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

Our organization and our members, who are people of diverse faiths across NY State, are committed to the just implementation of the Climate Leadership and Community Protection Act. The proposed data center lies within a Disadvantaged Community, as designated by the Climate Justice Working Group, which subjects this project to review under the CLCPA. Per Section 7(3) of the law, in considering and issuing permits, licenses, and other administrative approvals and decisions, all state agencies, offices, authorities, and divisions shall not disproportionately burden Disadvantaged Communities. Given the threats posed by this project to the Tonawanda Seneca Nation which lies within this Disadvantaged Community, and our overarching respect for Indigenous sovereignty, we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of NYS Department of Environmental Conservations' recommendations with respect to the SEQR environmental review process, and call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts;

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public; and

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation. It also threatens our Climate Law and violates the sovereignty and way of life of the Tonawanda Seneca Nation. This is a climate issue. This is a human rights issue. This is a moral issue.

In closing: we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of DEC's recommendations with respect to the SEQR environmental review process, and call on GCEDC to reject the incentives application from STREAM US Data Centers.

Sincerely,
Rev. Chelsea MacMillan
Senior Organizer

- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;
- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

I attened the last public hearing and was not able to speak until around 11:30pm. Many community members who would have liked to speak had to leave including some kids. I think that it is impartive that you hold more public hearings as well as publicly answer all of our questions about this project.

Sincerely,

Gina Schelemanow

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I have learned that GCEDC does not plan to hold additional hearings on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has set March 31 as the deadline for written comment on the data center proposal.

This is unacceptable. I demand:

- GCEDC must hold additional public hearings, at a range of times that accommodate people with varying schedules;
- The Board of Directors must be present at these hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal;
- GCEDC must upload the full, unedited videorecording of the March 19 public hearing as soon as possible;
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;
- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

I do not support the building of this data center. I firmly believe the process of bringing this facility to the local community has not been transparent. The environmental and communal consequences of this project yield only negative results for local tax payers and the people of the Tonawanda Seneca Nation.

Sincerely,

Colleen Logan-Bruce

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Stop the data Centers at STAMP WNY.

1] the western half of this land should be returned to nature, as part of the plan to make a natural corridor from Maine to Mexico. You should offer it for sale to either the Western NY Land conservancy or the Seneca, since it abuts directly to their Big Woods. The Big Woods and surrounding area has served the local Senecas and Seneca people from all around the area to hunt and pick medicinal herbs since the 1800's.

2] Spending over a Billion dollars to create a small number of jobs in a remote area makes no sense. Water, sewer and electricity would be required for possible 150 jobs. Furthermore, several large hydrogen generators will be needed as electricity back up, making noise and possible danger for the Seneca, the wildlife, the rare birds and so on. Would this benefit a few rich landowners and entrepreneurs at the cost of a billion dollars of money made from your taxes and mine? Couldn't a billion dollars be put to better use, for low-cost housing, hospitals, roads and bridge repair, newer water infrastructure to eliminate lead, public transportation and other things that benefit a larger swath of society? This is public money being misused for a few people.
3] This should not be approved until 3 years has been allowed for a full environmental impact study has been performed. Isn't that legally required?

Sincerely,

Sonia Efron

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I have learned that GCEDC does not plan to hold additional hearings on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has set March 31 as the deadline for written comment on the data center proposal.

This is unacceptable. I demand:

- GCEDC must hold additional public hearings, at a range of times that accommodate people with varying schedules;
- The Board of Directors must be present at these hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal;
- GCEDC must upload the full, unedited videorecording of the March 19 public hearing as soon as possible;
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;
- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

I presented at the March 19th meeting for a full 3 minutes. The video shortened my remarks making them unintelligible and completely out of context. I request you release the full, unedited version of the video.

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I have learned that GCEDC does not plan to hold additional hearings on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has set March 31 as the deadline for written comment on the data center proposal.

This is unacceptable. I demand:

- GCEDC must hold additional public hearings, at a range of times that accommodate people with varying schedules;
- The Board of Directors must be present at these hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal;
- GCEDC must upload the full, unedited videorecording of the March 19 public hearing as soon as possible;
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;
- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

It's obvious that you don't care about our community and what the people want. Please stop this idiotic plan and do what's right for the people and area .

Sincerely,

Carla Guiste

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Amanda Cronin

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Tracy Cerasani

Subject: STREAM SEQRA Question - Impacts to Livestock, Pets, Local Wildlife

I've been thinking about the potential impacts of the proposed data centers on nearby agriculture, wildlife, and domestic animals. Given the scale and 24/7 operational profile of the STREAM project, could the Lead Agency or the applicant confirm whether the environmental assessment includes any review of potential effects from sound, low-frequency noise, lighting, and air emissions — including but not limited to any review or confirmation by an appropriate industry or scientific expert — on:

- Livestock (cows, goats, poultry) — weight, milk production, behavior
- Companion animals (dogs and cats) — behavior
- Local game species (deer, turkey, pheasant, geese) — behavior and availability

If these analyses aren't included in the current SEQRA materials, could you let me know whether the Lead Agency plans to request them so the environmental review is complete with respect to agricultural operations, hunting resources, and residential animal welfare?

Thank you. ...Anne

Subject: Comment on monster data center
Attachments: Comment Data Center STAMP CLandis March 2026.docx

Dear GCEDC Staff,
Here is my comment, attached, on the proposed Data Center. It is the wrong project in the wrong place and would needlessly destroy or harm the lives of countless wildlife and plants, not to mention irreparable damage to the treaty protected lands of the Tonawanda Seneca Nation. Please do the right thing and protect this land from further harms.

Thank you for the opportunity to comment.

Sincerely,
Catherine

Comment Dr Catherine Landis, SUNY ESF
1647 Salt Springs Road, Syracuse, NY 13214

For hearing, March 19, 2026 regarding STREAM US Data Center

My name is Catherine Landis and I'm an ecologist at SUNY College of Environmental Science and Forestry. (I am speaking for myself, and not my institution.) I am a lifelong resident of upstate New York, and have long appreciated our natural heritage—lakes, rivers, streams, wildlife, clean air, forests, wetlands. This heritage must be protected from harms related to AI infrastructure. I strongly oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of DEC's recommendations; and I call on GCEDC to reject the incentives application from STREAM US Data Centers. To spend vast sums of taxpayer money to facilitate the war on nature in some of the best habitat in the State would be a travesty.

Here is the context for my remarks: Native plant and animal populations are hemorrhaging from landscapes all over the globe. Since 1970, the world's animal populations have crashed by an average of 60%, with major losses in "herps" (reptiles and amphibians); birds, which have declined by 30% (loss of 3 billion birds) in North America alone; and bats (53% of bat species in North America currently risk **extinction**). Every space counts to reverse this trend, especially large contiguous natural habitat such as found at STAMP.

As many people have said many times, industrial development here is egregiously mis-sited. STAMP belongs to a 20,000 acre complex that includes Federal and State protected areas, along with the territory of the Tonawanda Seneca Nation. The place represents the last major contiguous habitat block in Western NY, and one of the few remaining in the entire state, outside of the Adirondacks. Rather than sacrifice the land to a gigantic data center that benefits only a small group of wealthy shareholders, *we should be protecting it as a sanctuary and home* for remaining populations of wild plants and animals.

STAMP does not represent vacant land waiting to be developed with data centers or other facilities. Rather, it offers critical habitat for many species between Tonawanda Seneca Nation land and three State or Federally protected areas. For example, rare plants documented near the site include the Michigan lily (Endangered, NYS), heart leaf plantain (Threatened, NYS), and shellbark hickory (Threatened, NYS). We would lose these plants to development as habitats are urbanized and homogenized, taken over by monocultures of aggressive weeds such as common reed (*Phragmites australis*).

Further, over 140 bird species have been documented as using the site, based on Cornell University data. These include State protected species such as the Short-eared Owl, Northern Harrier, Sharp-shinned Hawk, Cerulean Warbler, Horned Lark, Eastern Meadowlark, American Kestrel, Grasshopper Sparrow, and more. Based on Breeding Bird Atlas data, several species nest in this area including Horned Lark, Baltimore Oriole, and Northern Harrier, and Bobolink. STAMP also provides critical stopover habitat for long distance migrants such as the American Golden Plover, which flies up to 20,000 miles each year as it migrates from breeding grounds on

the Arctic tundra of northern Canada and Alaska to the grasslands of southern South America and back again.

For reptiles and amphibians, the area is known to support Wood Frog, Blue-spotted Salamander (Species of Greatest Conservation Need, NYS), and Spring Peeper. Red-backed Salamander, American Toad, Leopard Frog, Green Frog, and Bullfrog also occur in the area. Habitat here may also provide summer homes for locally rare turtle species, such as the Spotted Turtle (Species of Greatest Conservation Need, NYS) and Blanding's Turtle (Threatened, NYS), both of which have been reported in the surrounding area.

For all the rare species I've listed, THE major threat is habitat loss. A gi-normous data center at this location would have permanently negative consequences by continuing to destroy habitat, and amid otherwise protected landscapes. **Specific impacts we can expect from this data center include:**

1) **Outright habitat destruction, fragmentation**. At 2 million square feet, the data center building alone covers almost 46 acres of land. Parking lots, roads, and other supporting infrastructure will exacerbate the loss. Such development would permanently shatter the ONE REMAINING contiguous large wild landscape in Western NY. We can also expect increased mortality of individual animals due to road kill (increase in traffic associated with industrialization).

2) **Water pollution**. Impacts will reverberate far beyond this 46 acre footprint. Stormwater runoff such as road salt and heavy metals in runoff from roofs and pavement will flow be in the direction of Tonawanda Seneca Nation and State WMA lands. Contaminated water will harm amphibian breeding sites, for example, since these vernal pool creatures are extremely sensitive to change in water chemistry.

3) **Light and noise pollution**. Continuous, 24/7 operation creates significant noise from cooling fans and HVAC systems, as well as light pollution, which can disrupt the behavior, reproduction, and migration patterns of nocturnal wildlife, birds, and insects. Noise and vibrations from construction or from the planned data center could interfere with frog chorusing, for example.

4) **Power Infrastructure:** The high electricity demand of data centers sucks power from the grid, and involves the expansion of high-voltage transmission lines, which can fragment habitats and impact species like the Short-eared Owl.

To help protect our plant and animal relatives, GCEDC must: A) conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP; and B) conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012. Such steps can help prevent this unthinking bludgeoning of the landscape* and all creatures in it.

*This phrase adopted from Rachel Carson's *Silent Spring*.

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I have learned that GCEDC does not plan to hold additional hearings on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has set March 31 as the deadline for written comment on the data center proposal.

This is unacceptable. I demand:

- GCEDC must hold additional public hearings, at a range of times that accommodate people with varying schedules;
- The Board of Directors must be present at these hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal;
- GCEDC must upload the full, unedited videorecording of the March 19 public hearing as soon as possible;
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;
- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

We are opposed to the construction of a data center in our area because of its negative impact on our community and environment. Data centers consume enormous amounts of electricity and water, which can strain local resources and increase utility costs for residents. They also generate constant noise. Additionally, the long-term environmental effects, including increased carbon emissions and heat output, raise serious concerns about sustainability. Our community deserves development that supports local needs, preserves natural resources, and maintains a high quality of life for residents.

Sincerely,

Jennifer Metz

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

This stamp plant is by far an away to big, way to expensive , going to harm wild life , our water supply and way to much light and noise pollution. GCDEC can not approve of this monster. Vote N O. This is very dangerous to the Native American people way of life. S T O P supporting Jeffery Epstein people. N O to STAMP project. And why so much in subsidies, $1.46 billion, that could pay for more teachers, lower my property taxes, go for daycare for families or other community organizations. STOP STAMP, vote NO

Sincerely,

David Alton

To: streampublichearing@gcedc.com
Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

streampublichearing@gcedc.com

Subject:	GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I have learned that GCEDC does not plan to hold additional hearings on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has set March 31 as the deadline for written comment on the data center proposal.

This is unacceptable. I demand:

- GCEDC must hold additional public hearings, at a range of times that accommodate people with varying schedules;
- The Board of Directors must be present at these hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal;
- GCEDC must upload the full, unedited videorecording of the March 19 public hearing as soon as possible;
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;
- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

Why would you support a bill that will raise my electricity rates, waste my tax dollars, and damage a beautiful ecosystem? This gift has to stop. You have already thrown away $300,000,000 of my taxes, now you want 1.4 BILLION MORE? Insane.

Sincerely,

William OConnor

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Karen Bonasera

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

Subject: Comment to GCEDC regarding Project Double Reed

To the Genesee County Economic Development Center (GCEDC):

My name is Cheyanne Witmer. I am a resident of the town of Darien. I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand the GCDEC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;
2) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;
3) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts;
4) Require that prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public;
5) Extend the public comment period for a minimum of 30 days.

For a more personal comment, I am appalled that this project has even gotten so far along its planning phases. As an avid lover of the outdoors, there is no amount of profit or good business deals that would justify the desecration of wilderness this project will cause for generations to come. The environmental impacts of having low-level noise in the background 24/7, chemical discharges, and habitat destruction all next to a federally protected refuge and the Tonawanda Seneca Nation is obvious to anyone who looks into it for more than 2 minutes and I know does not need to be explained to the GCEDC because it's clear they don't care.

What is almost more asinine is that Project Double Reed is also a terrible business deal for Genesee County. A project like this will simply not generate economic development in the region as GCEDC claims that it will. A multibillion dollar company like Apollo does not need $1.46 billion in tax abatements. While that is not money handed directly to the company, it is a loss of revenue that Genesee County residents will inevitably have to pick up through increases in utilities and additional taxes since such a large industrial site will surely be a drain on our resources. Not to mention people's property values surrounding the site will certainly go down. The estimated number of jobs has already dropped from thousands to merely 125 - what is the likelihood that estimation will go down again? And, all of the listed financial benefits to this project are revenues projected over 30 years. Although this part is only speculation, the nature of this technology is such that this Data Center likely won't even be

relevant in 15 years - that's less than 10 years of actual business considering the time it would take to get this built.

I attended the public meeting held Thursday, March 19th at the Alabama Town Fire Hall and stayed for 4 1/2 hours as person after person stated their unequivocal opposition to this project. Two things are clear to me after attending that meeting: the people of Genesee County and WNY do not want this project - at least with its current plans, and that GCEDC and the town board are not taking the public comments seriously enough. No one from the town board could be bothered to show up, despite this easily being the biggest project going on in Alabama. More meetings need to be held both with the town board present and at different times throughout the week to give everyone who wants to speak a chance to do so. If the board is going to decide issues that have such a large impact on the community, they should be able to face its members and answer their questions.

I sincerely hope GCEDC takes my comments and the comments of every other person opposing Project Double Reed into consideration.

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I have learned that GCEDC does not plan to hold additional hearings on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has set March 31 as the deadline for written comment on the data center proposal.

This is unacceptable. I demand:

- GCEDC must hold additional public hearings, at a range of times that accommodate people with varying schedules;
- The Board of Directors must be present at these hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal;
- GCEDC must upload the full, unedited videorecording of the March 19 public hearing as soon as possible;
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;
- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

God is watching

Sincerely,

William j penepent

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

It's appalling to even begin to consider giving this funding and access to a corporation deeply tied to Jeffrey Epstein's criminal financial network, for a project in generative AI that we all know is going to suffer an economic crash.

Investing in AI during a global energy supply crisis is foolish and will be remembered by voters across the state and nation as one of the most traitorous things you could do. Do you think voters will forgive you for that?

There is a strong chance that this entire facility will go belly up. If it does, your career goes with it. The American-Iranian War and release of the Epstein Files should each be enough to make you understand this project is not worth the risk. Either issue could completely scuttle this project overnight.

The cost of saying no? Nothing. The cost of saying yes? Likely your career. Choice is yours.

Sincerely,

Ryan Evans

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I have learned that GCEDC does not plan to hold additional hearings on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has set March 31 as the deadline for written comment on the data center proposal.

This is unacceptable. I demand:

- GCEDC must hold additional public hearings, at a range of times that accommodate people with varying schedules;
- The Board of Directors must be present at these hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal;
- GCEDC must upload the full, unedited videorecording of the March 19 public hearing as soon as possible;
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;
- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

Sincerely,

Evelyn Wackett

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Hear the people. Workers are uniting, we will not stand by and let the rich destroy our home.

Sincerely,

Corey Turnpenny

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I have learned that GCEDC does not plan to hold additional hearings on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has set March 31 as the deadline for written comment on the data center proposal.

This is unacceptable. I demand:

- GCEDC must hold additional public hearings, at a range of times that accommodate people with varying schedules;
- The Board of Directors must be present at these hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal;
- GCEDC must upload the full, unedited videorecording of the March 19 public hearing as soon as possible;
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;
- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

Other states are no longer offering incentives as they've realized the harm

Our water and electricity systems cannot handle this. The environmental impact is irreparable

Sincerely,

Sara Gillard

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I have learned that GCEDC does not plan to hold additional hearings on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has set March 31 as the deadline for written comment on the data center proposal.

This is unacceptable. I demand:

- GCEDC must hold additional public hearings, at a range of times that accommodate people with varying schedules;
- The Board of Directors must be present at these hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal;
- GCEDC must upload the full, unedited videorecording of the March 19 public hearing as soon as possible;
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;
- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

Genesee County simply can not afford this project. However, I would be very interested to know the names of the few who will profit and perhaps how so much information was so difficult to become transparent.

Board members that vote to pass this must be prepared to either step down or be maybe prepare for a lawsuit.

Sincerely,

Katharine M. Harrington

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

streampublichearing@gcedc.com

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

The increase in local utility costs for consumers living in Genesee County must be considered before any subsidies for the data center are considered. Unless there are strong provisions in the permits for the utility to offset these costs, the residents of the County will be faced with much higher bills. Please refer to the analysis below from the Union of Concerned Scientists:
https://blog.ucs.org/mike-jacobs/data-centers-are-already-increasing-your-energy-bills/

Sincerely,

streampublichearing@gcedc.com

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

streampublichearing@gcedc.com

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I have learned that GCEDC does not plan to hold additional hearings on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has set March 31 as the deadline for written comment on the data center proposal.

This is unacceptable. I demand:

- GCEDC must hold additional public hearings, at a range of times that accommodate people with varying schedules;
- The Board of Directors must be present at these hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal;
- GCEDC must upload the full, unedited videorecording of the March 19 public hearing as soon as possible;
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;
- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

I was in attendance at this hearing. I arrived at 6:30 pm for a 7 pm start time, hoping to sign in to speak among the first because I had to leave by 9 pm. I never did have a chance to speak.
The GCEDC needs to schedule AT LEAST one more - probably several more - open hearings. Anything short of that will be experienced by the citizens as ramrodding and railroading this project through in spite of our resistance. If that seems to be happening, you know very well the next step is the courts.
This is a FALSE FIGHT in the first place. I drive all over WNY and there are MANY, MANY abandoned industrial sites (even abandoned malls) all over that could be used for this sort of development. People are NOT against jobs. They are not against bringing business into our area. The construction of the giant Amazon warehouse near the Thruway and Rte 77 is a positive example of a good project and a good site.

They are AGAINST having this particular project built next to the Tonawanda Seneca Nation's sacred lands; They are AGAINST the noise, water, light, and air pollution next to and in the midst of PROTECTED WILDLIFE areas. They are AGAINST outrageously high tax payer incentive requests. And all for the purpose of building something that none of us wants or needs - a generative AI data center.
This is SO crazy it defies explanation other than the almighty profit-motive. The GCEDC must be driven by the desire for money. There is no other explanation that fits all the behaviors around this. No sane person would say: "Gosh, let's spend a fortune in tax payer dollars to build something we neither want nor need in a place that desecrates the lands of indigenous people and ruins the environment. Doesn't that sound like a good idea, folks? Why are you resisting that?"
Come on.....
Please, go back to the drawing board on this proposal. It's not going to 'sell' to the people. Not now - not ever.

Sincerely,

The Rev. Canon Barbara J. Price

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

While supporting all of the points above and the request that they all be examined and OK'd by the wide community, there are several other concerns, below, that compel me to ask that the entire STAMP Project - in-place and looking-for/trying-to attract a tenant since at least 2012 [20 yrs w'o a success!] - be stopped/sunsetted, and a new community-sanctioned task group or commission be chartered to take a new, up-to-date, re-lo, and re-plan for a major economic/workforce center in the Alabama area. My net is STOP, re-group, agree, and restart per the agreements. Below, I point out a few of many reasons why this STOP/ReStart should be done:

-Original approved plan: 6 Mgal/day w'water, 6M/ day water; no: noise, odor, light, scenic pollution?? Plan & Incent. based on 9,300 jobs - 68...125 jobs so far?? It's 20 years, no tenant; new approach??
-GCEDC is Developer,...and Approver! Is this ethical, legal? Request: re-start, & new approver.
-the Current prospective tenant, as those in the past, look to be bad deals for the community:
- very high incentive [$1.5 B] for 125 jobs or $11.7M/job. Local labor waiver raises questions.
-500 MW Elec. - 1/8 NYPA-Niagara's output - needs a very careful analysis of: NYPA surplus & projections & effect on community/rates - it's enough for 400,000 homes - all of GLOW+Roch.
-7 Stand-by generators to burn 114,000 gal/yr - how about: noise, smell, and pollution ! ?

Sincerely,

Richard H Pierce

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Thomas Ikeda

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I have learned that GCEDC does not plan to hold additional hearings on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has set March 31 as the deadline for written comment on the data center proposal.

This is unacceptable. I demand:

- GCEDC must hold additional public hearings, at a range of times that accommodate people with varying schedules;
- The Board of Directors must be present at these hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal;
- GCEDC must upload the full, unedited videorecording of the March 19 public hearing as soon as possible;
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;
- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

Please extend the comment period.

Sincerely,

Adrienne Yocina

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Marshall Flanigan

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Robert Janusko

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I strongly opposed the violation of the local Seneca Nation sovereignty, the destructive exploitation of water, and other environmental resources and quality of life, and the outrageous public subsidies at the cost to all taxpayers. I call on agencies involved to totally reject this irresponsible and destructive project.

Sincerely,

Louis Sebesta

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Laura Wooley

1. It is so just like white people have always been to put a polluting monstrosity next to the downtrodden and disenfranchised, in this case the Tonawanda Seneca.
2. STAMP has been a money pit with few benefits, and it is obvious some fat cat's pockets are getting padded. Just stop before further harm is done using my tax dollar.
3. For once, stop trashing environmentally sensitive areas, would you please?

Sincerely,

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Data centers use so much electric that we can't reach our renewable goals.

Sincerely,

streampublichearing@gcedc.com

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Rev. Chelsea MacMillan

My name is Alina Egolf. I live in Gaines, NY, a neighbor in Orleans County.

I oppose the proposed data center complex at STAMP.

Apollo Global Management, one of the worlds largest investment firms, worth over 60 billion dollars itself, does not need any handouts from Genesee County in the form of tax abatements.

These tax abatements make it so Apollo Global Management takes on very little risk in their new data center while it guarantees harm to local residents' property value, surrounding wildlife, will increase energy bills, diminishes quality of life and the possibility of future residents.

No one is proud to live in an area with a data center and no one new will be moving here if it's built. I, myself, am a new resident to the area. I moved to Orleans County with my fiancé 4 months ago because we are aspiring first generation farmers. We did not know about the proposed data center prior to moving. If we did, it would have put strain on the decision to buy our home. Allowing this data center their loop holes in tax payments will scare away any other young people such as myself who want to be a part of uplifting rural communities and take over farms from your aging population of farmers.

The locals don't want this data center, yet we've been told by town representatives that there's nothing to be done about it. Laws are in place to protect billionaires' interests, not ours.

The consulting engineer from Wendel Companies, meant to represent the Town of Alabama in reviewing STREAM's application, used a callous analogy to explain to us how little say we have in this data center being built. She compared the data center to "your neighbor putting an ice cream parlor on their land, even if you don't want it and hate ice cream." I don't know of a single ice cream parlor that has been proven to harm local residents, natural resources, and wildlife, the way that data centers do.

It is corrupt that despite the disinterest from the community, the only people with a say in this data center being built are GCEDC, who personally financially benefit from this deal going through. $1.45 million minimum going to GCEDC per the incentives application. It is also a conflict of interest that GCEDC is acting as lead agency for environmental review of the data center and that STREAM provides their own research for review.

To representatives of the Town of Alabama, I understand how you've been told that your hands are tied. To that I would ask: Has anyone you have admired in your life backed down from a barrier when a group of people needed representation?

To: streampublichearing@gcedc.com
Subject: STREAM US Data Centers
Attachments: For the Many_ STAMP Data Center Public Comment.pdf

Dear Genesee County Economic Development Center (GCEDC),

My name is Xaver Kandler and I'm the Political Director at For the Many. For the Many is a grassroots community-based organization that fights to win elections and pass laws that transform the lives of people across New York State.

We submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

Our organization is committed to the just implementation of the Climate Leadership and Community Protection Act. The proposed data center lies within a Disadvantaged Community, as designated by the Climate Justice Working Group, which subjects this project to review under the CLCPA. Per Section 7(3) of the law, in considering and issuing permits, licenses, and other administrative approvals and decisions, all state agencies, offices, authorities, and divisions shall not disproportionately burden Disadvantaged Communities. Given the threats posed by this project to the Tonawanda Seneca Nation which lies within this Disadvantaged Community, and our overarching respect for Indigenous sovereignty, we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of NYS Department of Environmental Conservations' recommendations with respect to the SEQR environmental review process, and call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts;

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public; and

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation. It also threatens our Climate Law and violates the sovereignty and way of life of the Tonawanda Seneca Nation.

In closing: we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of DEC's recommendations with respect to the SEQR environmental review process, and call on GCEDC to reject the incentives application from STREAM US Data Centers.

Sincerely,
Xaver Kandler
Political Director

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Jenny Goldstein Prahl

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

By the end of 2025…average electricity prices in the United States increased to 19 cents per kWh, about 27% more than in 2019. NO MORE subsidies for big business at the expense of citizens (like me and my family) OR the environmental drain on local water resources!

Sincerely,

streampublichearing@gcedc.com

Subject:	GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I have learned that GCEDC does not plan to hold additional hearings on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has set March 31 as the deadline for written comment on the data center proposal.

This is unacceptable. I demand:

- GCEDC must hold additional public hearings, at a range of times that accommodate people with varying schedules;
- The Board of Directors must be present at these hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal;
- GCEDC must upload the full, unedited videorecording of the March 19 public hearing as soon as possible;
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;
- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

We don't want the Data Center!!! Please find an alternative business!

Sincerely,

LeeAnn Mulllen

This is not what something that should even be considered by people in an appointed position. The best interests of the general public of the area they serve should be the top priority of the approving members rather than just following temporary financial gains. A project like this will permanently scar the land resulting in a huge, expensive, clean up effort in the future. Although that's part of the problem, because the people approving these data centers know they will get away with their money and won't have to deal with the consequences in no the future.

Sincerely,

Colby Leggo

- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

It would be nice if the GCEDC would actually have shown up, listen to the comments, and take an appropriate action. The initial big influx of money does not even come close to balancing out the incentives offered. It’s a bad business deal all the way around, for men and beast alike.

Sincerely,

Amy Tannehill-Joyner

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

streampublichearing@gcedc.com

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

What is your priority? Should we really be choosing convenience in technology over the cleanliness of our water? Our electric bills have gone up in our county, have yours? What's going to happen if we allow this massive strain on the system and scourge to our environment blemish our native lands. Do the right thing for our generation and generations to come. Our priority needs to be environment over economy and building up technology that is causing more harm than benefit. We didn't sign up for this. Advocate for the living, breathing things in our community, not capitalism.

Sincerely,

Stephanie Taylor

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I have learned that GCEDC does not plan to hold additional hearings on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has set March 31 as the deadline for written comment on the data center proposal.

This is unacceptable. I demand:

- GCEDC must hold additional public hearings, at a range of times that accommodate people with varying schedules;
- The Board of Directors must be present at these hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal;
- GCEDC must upload the full, unedited videorecording of the March 19 public hearing as soon as possible;
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;
- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

Sincerely,

Jennifer Keppler

Subject: No Data Center in Genesee County and Alabama!

To Whom It May Concern,

I am reaching out against putting in a data center in our county and near our protected lands. We do NOT want a data center in Genesee county, and we do NOT want it to take away the precious land we love and came to this part of New York for. It would be absolutely disgraceful to destroy our lands for something none of the people want. We do NOT want a data center anywhere near Iroquois National Wildlife Refuge or the lands of Tonawanda Seneca Nation. These are the reasons people live in our county. To enjoy the culture, peace, and green of upstate New York. Adding a data center would jeopardize important wildlife habitats and groups, Native American culture, hurt taxpayers, and hurt farmers. Please protect our land and rights as citizens. Please protect our culture. Please protect our peace. Do not use our tax money to destroy the last bit of what we love of upstate New York. Please protect the people and our land.

Please say NO TO DATA CENTERS! SAY NOT IN OUR COUNTY!!

Thank you for your time. I urge you to please help the people and the land.

Thank you & Best regards,

Mia

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

streampublichearing@gcedc.com

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I have learned that GCEDC does not plan to hold additional hearings on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has set March 31 as the deadline for written comment on the data center proposal.

This is unacceptable. I demand:

- GCEDC must hold additional public hearings, at a range of times that accommodate people with varying schedules;
- The Board of Directors must be present at these hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal;
- GCEDC must upload the full, unedited videorecording of the March 19 public hearing as soon as possible;
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;
- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

Sincerely,

Jozef O'Malley

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Michael Hollywood

Subject:	GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I have learned that GCEDC does not plan to hold additional hearings on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has set March 31 as the deadline for written comment on the data center proposal.

This is unacceptable. I demand:

- GCEDC must hold additional public hearings, at a range of times that accommodate people with varying schedules;
- The Board of Directors must be present at these hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal;
- GCEDC must upload the full, unedited videorecording of the March 19 public hearing as soon as possible;
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;
- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

Forget about building that atrocity at this location in Genesee County. Nobody believes your lies. NOT good for Mother Earth or nearby residents (animals and people).

Sincerely,

Elisabeth Collins

- The Board of Directors must be present at these hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal;
- GCEDC must upload the full, unedited videorecording of the March 19 public hearing as soon as possible;
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;
- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

The negative impacts of the proposed STREAM Data center far outweigh any potential positive impacts of letting the project move forward. On March 19, after more than 5 hours of public comments there were still many people who wanted to speak but we're unable to stay so late and do so. GCEDC must hold more meetings at a variety of times to allow everyone's voice to be heard on this project that will have such a big impact on the community and the region as a whole.

Sincerely,

Elizabeth Thompson

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

NO infrastructure! Middle of no where. Millioins of wasted tax payers $$. Already pollution spills, in the middle of Nature preserves, wildlife refuges, and farm lands. All people are on well water. ADMIT it s a bad idea and STOP. US govt have trampled on Indigenous rights and land for too long . STOP for the people, the animals and birds, STOP this nonsense for the Great Lakes, please wake up!

Sincerely,

Patricia Corcoran

Subject:	GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I have learned that GCEDC does not plan to hold additional hearings on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has set March 31 as the deadline for written comment on the data center proposal.

This is unacceptable. I demand:

- GCEDC must hold additional public hearings, at a range of times that accommodate people with varying schedules;
- The Board of Directors must be present at these hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal;
- GCEDC must upload the full, unedited videorecording of the March 19 public hearing as soon as possible;
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;
- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

I am very concerned about the impact this data center would have on the surrounding area. It is evident that the residents of Alabama/Basom do not want it either. INWR/Tonawanda Wildlife Area abut this site; it would be an environmental disaster to have the center located here. WNY has a history of big name/big $ prancing in (Tesla, anyone?) promising jobs in exchange for astronomical subsidies, only to grab the cash & renege on the obligations. NOPE!

Sincerely,

Mary C Uebbing

Please, GCEDC, listen to the community on this! Look at your local legacy: the empty Kmart building, the falling apart building on Harvester Avenue, the abandoned Tractor Supply Store on East Main, the empty place that was formerly Pizza Hut...business and money are not the answer to everything, no matter what you might think. Also, you might find it instructional and educational to look at what's happened with Great Lakes Cheese in Franklinville (New York). Tax breaks were provided and jobs were realized there, yet somehow the nearby Ischua Creek and much of its vibrant life was quickly destroyed. Funny, isn't it, how so much gets promised by corporations, but then it turns out that when all is tabulated--including social costs and environmental costs--things turn out to be not so funny at all.

Could you also please let the community know how each of you would personally and financially benefit from this proposed development?

And don't hesitate to contact me if you'd wish to discuss this further.

Thanks.

Sincerely,

Kathy A. Zawicki

Stop trying to ruin native land. Stop building data centers off of taxpayer dollars. If these data centers are so important those who want to build them will pay for the materials, labor, and find suitable land that isn't adjacent to protected water.

Or just fucking die instead of plaguing our society with your lack of integrity.

Sincerely,

Derek Goodison

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I have learned that GCEDC does not plan to hold additional hearings on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has set March 31 as the deadline for written comment on the data center proposal.

This is unacceptable. I demand:

- GCEDC must hold additional public hearings, at a range of times that accommodate people with varying schedules;
- The Board of Directors must be present at these hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal;
- GCEDC must upload the full, unedited videorecording of the March 19 public hearing as soon as possible;
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;
- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

Please extend the public comments period and reconsider the AI data center that you are inviting into our area and giving ridiculous subsidies to. There are incredible negatives to this project and no real positives. Very shortsighted and sure to be a disaster in the long term. The local citizens are entirely opposed to this !

Sincerely,

Nadine Wawrzyniec

- The Board of Directors must be present at these hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal;
- GCEDC must upload the full, unedited videorecording of the March 19 public hearing as soon as possible;
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;
- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

Sincerely,

David Cocuzzi

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

streampublichearing@gcedc.com

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I have learned that GCEDC does not plan to hold additional hearings on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has set March 31 as the deadline for written comment on the data center proposal.

This is unacceptable. I demand:

- GCEDC must hold additional public hearings, at a range of times that accommodate people with varying schedules;
- The Board of Directors must be present at these hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal;
- GCEDC must upload the full, unedited videorecording of the March 19 public hearing as soon as possible;
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;
- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

I'm here tonight because I care deeply about our town and the kind of future we are choosing for it.

This proposed data center may sound like progress on the surface, but when you look closer, it raises serious concerns that cannot be ignored.

First, the energy demand. Data centers are some of the most energy-intensive facilities in the world. Bringing something like this into a small community like ours could strain

local infrastructure, increase utility costs, and change how our power is sourced. That impacts every resident here—not just today, but long-term.

Second, the water usage. Many data centers require massive amounts of water for cooling. We need clear answers: Where is that water coming from? What happens during drought conditions? And how does this affect local wells, farms, and our environment?

Third, noise and quality of life. These facilities run 24/7. That means constant mechanical noise from cooling systems and backup generators. This is not something that simply blends into a quiet, rural community.

Fourth, economic reality versus promises. We often hear about "jobs" and "growth," but the truth is, data centers typically bring very few permanent jobs once construction is complete. We need to ask: Is this trade-off worth it for our town?

Fifth, community character. We chose to live here for a reason—open space, peace, and a certain way of life. A large industrial facility changes that permanently. Once it's built, there's no going back.

I am not against growth. I am for responsible, transparent, and community-focused development. That means:

- Full environmental impact studies
- Independent review of energy and water use
- Clear long-term cost/benefit analysis
- And most importantly, giving the residents a real voice in this decision

We should not rush into something that could fundamentally change our town without fully understanding the consequences.

I urge the board to slow this process down, demand complete transparency, and prioritize the people who already live here over outside interests.

Sincerely,

Heather Wiley

Subject:	GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I have learned that GCEDC does not plan to hold additional hearings on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has set March 31 as the deadline for written comment on the data center proposal.

This is unacceptable. I demand:

- GCEDC must hold additional public hearings, at a range of times that accommodate people with varying schedules;
- The Board of Directors must be present at these hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal;
- GCEDC must upload the full, unedited videorecording of the March 19 public hearing as soon as possible;
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;
- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

As a common visitor to and performer in Genesee County, I join residents in strongly opposing the construction of a new data center. You must extend the comment period and hold an additional public hearing with the entire Board of Directors present. Do not ignore your community members. Let them be heard, then follow their lead.

Sincerely,

Julia Riley

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Anne Marie Sequerth

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I have learned that GCEDC does not plan to hold additional hearings on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has set March 31 as the deadline for written comment on the data center proposal.

This is unacceptable. I demand:

- GCEDC must hold additional public hearings, at a range of times that accommodate people with varying schedules;
- The Board of Directors must be present at these hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal;
- GCEDC must upload the full, unedited videorecording of the March 19 public hearing as soon as possible;
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;
- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

The ask is really simple: consider ALL the direct and indirect costs to determine the final cost to benefits ratio. Then rule according to the law.

Sincerely,

streampublichearing@gcedc.com

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

A data center, as well as the STAMP industrial site is just wrong for the Tonawanda Seneca Nation and for the environment here in NY state in the Great Lakes region. Protect our woods and waters and People and just don't do it!

Sincerely,

streampublichearing@gcedc.com

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I have learned that GCEDC does not plan to hold additional hearings on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has set March 31 as the deadline for written comment on the data center proposal.

This is unacceptable. I demand:

- GCEDC must hold additional public hearings, at a range of times that accommodate people with varying schedules;
- The Board of Directors must be present at these hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal;
- GCEDC must upload the full, unedited videorecording of the March 19 public hearing as soon as possible;
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;
- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

I grew up in Batavia and often visit family and friends and frequent different businesses there. I would hate to see this happen to my hometown.

Sincerely,

Richard DelPlato

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

streampublichearing@gcedc.com

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I have learned that GCEDC does not plan to hold additional hearings on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has set March 31 as the deadline for written comment on the data center proposal.

This is unacceptable. I demand:

- GCEDC must hold additional public hearings, at a range of times that accommodate people with varying schedules;
- The Board of Directors must be present at these hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal;
- GCEDC must upload the full, unedited videorecording of the March 19 public hearing as soon as possible;
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;
- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

Sincerely,

Sharon Larmon

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I have learned that GCEDC does not plan to hold additional hearings on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has set March 31 as the deadline for written comment on the data center proposal.

This is unacceptable. I demand:

- GCEDC must hold additional public hearings, at a range of times that accommodate people with varying schedules;
- The Board of Directors must be present at these hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal;
- GCEDC must upload the full, unedited videorecording of the March 19 public hearing as soon as possible;
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;
- Thus, GCEDC must extend the deadline for comments on the data center proposal until the above demands have been met.

Sincerely,

Rozina Portelli

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

This data center relies on huge tax subsidies to locate here. The benefits to local residents are limited,not even ensuring that the 125 employees to be hired will be from Genesee County or the western NY region. The environmental risks far outweigh the positives, including release of toxic chemicals into air and water .Even closed systems can recover only 70% of water needed to cool machines. amount of electricity required not only taxes the grid but raises rates for all NYS residents.

Sincerely,

Phyllis Tierney

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I have written in the past protesting the entirety of the STAMP industrial site near the Iroquois Wildlife Refuge and the Tonawanda Seneca Nation. This data center is entirely unsuitable for the area and has the potential for enormous environmental harm.

Sincerely,

Georgette Stockman

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

DO THE RIGHT THING!!

Sincerely,

Paul J Palla

Subject:	Proposed data centre - comment from Coeymans, NY
Attachments:	Data Center in Alabama, NY 22Mar26.docx; Untitled attachment 00077.htm

Clean Air Coalition
of Greater Ravena-Coeymans, NY
www.cleanairalbanycounty.org
contact@cleanairalbanycounty.org

To the Genesee County Economic Development Center (GCEDC):

My name is Barbara Heinzen. I am a member of the Steering Group for the Clean Air Coalition of Greater Ravena-Coeymans. We are a small group of local people working to limit air pollution as well as protecting and restoring environmental wealth in our local area. We want to comment on the proposal to build a data center complex in Alabama, NY.

We submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

Our organization is committed to the just implementation of the Climate Leadership and Community Protection Act. The proposed data center lies within a Disadvantaged Community, as designated by the Climate Justice Working Group, which subjects this project to review under the CLCPA. Per Section 7(3) of the law, in considering and issuing permits, licenses, and other administrative approvals and decisions, all state agencies, offices, authorities, and divisions shall not disproportionately burden Disadvantaged Communities. Given the threats posed by this project to the Tonawanda Seneca Nation which lies within this Disadvantaged Community, and our overarching respect for Indigenous sovereignty, we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of NYS Department of Environmental Conservations' recommendations with respect to the SEQR environmental review process, and call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts;

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public; and

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation. It also threatens our Climate Law and violates the sovereignty and way of life of the Tonawanda Seneca Nation.

In closing: we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of DEC's recommendations with respect to the SEQR environmental review process, and call on GCEDC to reject the incentives application from STREAM US Data Centers.

Sincerely,

Barbara Heinzen
Member and coordinator
Clean Air Coalition of Greater Ravena-Coeymans

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Data centers are not economic development. They don't provide good, permanent jobs for the community, and when active they destroy quality of life for miles around with noise, light, and air pollution. They raise electricity bills and use huge amounts of water.

Please reject the incentives package and use the most rigorous standards to evaluate whether this data center should exist in your community. I hope you'll see that these data centers destroy communities for the profit of very few people.

Sincerely,

Galicia Outes

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Listen to our long-time stewards of the land.

Sincerely,

Adrien Winter

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Make all the IA computing and data centers be paid for exclusively by the owner, make them be completely off grid and fossil fuel free. AI data centers should not reduce the availability of the public to benefit from the Public Utilities which we fund. Let the computer companies pay for and secure their own renewable (no carbon emissions) and completely electricity grid independent. Microgrids can be effective and non polluting. Make it so!

Sincerely,

Daniel C Huber

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

The indigenous folks in this country don't need any more environmental harm to befall themselves or thier land. All the people in New York deserve clean air, water, and food. The amount of success we achieve is not nearly as important as our definition of success. Creating more money for companies does not enrich the community, planet or people. We do not inherit the earth from our parents, we hold it in trust for our grandchildren.

Sincerely,

Constance Lightman

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Carol Rothenberg

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Anne Murray

We do not want billions of tax dollars paying for an environmentally destructive, enormously polluting data center that will offer nothing in return to the community. This is just asking us to pay for our own destruction. Absurd.

Sincerely,

streampublichearing@gcedc.com

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Are rate-payers going to fund the infra-structure upgrades? Is this center going to use polluting generators? Is this center going to use vast amounts of water, and if so, are they going to clean it up before disposing of it? Is this center going to have lights on 24/7 and are they at least a mile from residences?

Sincerely,

streampublichearing@gcedc.com

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Daniel Donohue

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

This data center threatens the quality of life, well-being, and cost of living of local communities. It violates the sovereignty and way of life of the Tonawanda Seneca Nation. The proposed data center poses massive social and environmental risks for all of New York state and the Great Lakes Bioregion.

Sincerely,

Jessica Langer

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

ayse Yonder

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

This project is an affront to all NY-ers except the billionaires. This is a blatant attempt to enrich themselves even further at the expense of the Tonawanda Seneca Nation and the Iroquois National Wildlife Refuge. This will lead to massive environmental disruption and significant utility rate hikes for all of upstate NY. Fuck this project .

Sincerely,

streampublichearing@gcedc.com

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Respect the people that have lived there longer than most. Respect the words of a community and first nation. After all we are still a country by the people for the people right? We listen and hear what we are saying: NO. DATA CENTER.

Sincerely,

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I've seen the utility cost nightmare in the DC area, where data centers are popping up all over. Don't need that here.

Sincerely,

Ann Dunlop

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

streampublichearing@gcedc.com

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

streampublichearing@gcedc.com

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

None of this will benefit the citizens of this region. The damage to the environment and the cost of "supporting" a profiteering venture is, quite frankly, incalculable. The first thing anyone should ask is, prove the need.

Sincerely,

Emily Metz

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

streampublichearing@gcedc.com

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

This proposed data center will not only create an extraordinary impact to the region's economy and environment, it will impact well beyond the regions borders.
What this data center also does is it violates the Tribal rights of the Seneca Nation - completely unacceptable!!!

Sincerely,

streampublichearing@gcedc.com

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Alan Stein

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

My name is Ashley Greene and I live in the.village of Oakfield (14125). And I strongly oppose the Data center coming into our community for so many reasons. Data centers are known to wreak havoc on the environment, particularly in regards to the water consumption and water polution and noise polution. Not only this, but they are such a drain on electricity that locals would be guaranteed to have.their electricity rates.spike. People are already struggling to make ends meet, why would we invest in a project that costs the people being effected by it most even more money, while destroying land that borders not only a reservation, but also a refugee? There seems to be zero benefit to anyone involved,

and yet the Data project would receive an outrageous tax break. Please do not let this project come into our communtiy.

Sincerely,

Ashley Greene

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Not only should a data center -- particularly one for generative AI that wastes precious water, raises bills, and poses no meaningful benefit to the surrounding community -- not be constructed *at all,* a subsidy for it, one of this magnitude no less, with no regard for the Tonawanda Seneca Nation's terms, is outright blasphemy. Moving forward in this way is a treaty violation and a harm to the Nation's people and land. If this project advances, it will be to the detriment of the health and wellbeing not only of the Nation, not only of the nearby residents, but of all New Yorkers. I oppose the financial incentives request submitted by STREAM US Data

Centers and demand that GCEDC follow all of NYS DEC’s recommendations as a bare minimum. A threat of this kind playing out displays such an appalling disregard for history, human beings, and nature. It's also a terrible deal for the county: few jobs at an exorbitant price, higher cost of living, dependency on an unpredictable AI bubble, and a massive degradation of already strained environmental resources. Stop this massive data center.

Sincerely,

Devyn Inez Fusaro

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

streampublichearing@gcedc.com

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Having this Data Center would screw all of us financially and the communities health. It is sickening that these places suck all of the communities recources and do not pay raxes or have to deal with the economic fallout or the health issues.

Sincerely,

Stephanie Holmes

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Brittany Martin

How stupid is (GCEDC). To want to place in middle of (2) bird sanctuary's, and next to the Tonawanda Seneca Nation. A toxic, loud mega data center. Plus withhold information on who is behind this (owner). This data center is not wanted here. It will kill our way of life in the area.

Sincerely,

streampublichearing@gcedc.com

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Data Centers will drive up costs for electricity for the average consumer, UNLESS the AI companies supply there own power plants.

Sincerely,

Jay Blackman

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

It seems there is a furious pace across our nation to build data centers without having done full environmental and community impact investigations. Data centers require a tremendous amount of water for cooling which seems to be pulling from the very same sources that serve communities, farmers needed with clean water for drinking/farming. It seems to be that the AI industry is driving us the nation way way too fast and the negative impact surely can not be worth giving up clean air, water and cultural rights of the Indigenous.

Sincerely,

Kerith Creo

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Alena Jorgensen

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Roger Hecht

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

streampublichearing@gcedc.com

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

streampublichearing@gcedc.com

Reverand Danielle Lovett-Gardner 14416

In every scenario in which a data center is built, the surrounding community suffers. Unless you can show one single example in which the community surrounding a data center thrives, why should any of us believe that this one will be different?

I suspect you think and hope that rural people are stupid.
Unless you can promise me that this proposed data center will not harm one single blade of grass, I will not believe your claims that it will not harm children, adults, wildlife, pets, farmland, or our water supply.
I keep reading that this data center will thrive for 30 years. A project of this expense to the tax payer should last for eternity and be beneficial immediately to 100% of the community. 30 years is an extremely short life span for any structure. Please explain what happens when the technology becomes obsolete, which all technology does. What becomes of the structure? The only thing I trust that will last my lifetime is the damage done to our community and the planet.
I will also raise your awareness that our community does not like AI. We prefer human art made by calloused hands.
I understand this will bring very few jobs to the area.
One thing I find frustrating is a proposal that not only brings so much damage to the community but also ignores our every need. We need a community center. We need clean air. We need a place for kids to play safely. We need parks. We need non-toxic farmland.
Why don't you put in a park?
It is very clear to every member of Genesee County that this project benefits nobody except the out of state billionaires proposing it.
I'd appreciate it if you joined me in telling them to build a data center in their own back yard if they like them so much. If they're so safe and wonderful, why won't they? Why don't the rich build these in their own cul-de-sacs?
If you hope that rural people will be quiet and lazy about this, I suppose you've never heard a country song.
We also demand to know who is trying to build this. The only name I've heard so is Epstein. An association like that is obviously not welcome here.
We demand that this project is cancelled for the safety of our children, our crops, our land, our families. Again, there is zero evidence on planet earth that a data center is a good thing for community or land.

Sincerely,

streampublichearing@gcedc.com

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Please consider people and the planet over short-term profits. Thank you.

Sincerely,

Rita Walton

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Judith Edelstein

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I stand in solidarity with the Tonawanda Seneca Nation against the data center to be built next to the Nation as a part of the Western New York Science and Technology Advanced Manufacturing Park (STAMP). As a lifelong NYS resident, educated middle class professional who grew up in a rural neighborhood, it is quite clear how damaging this will be to the community and environment for generations, due to the greed of a few at present.

This mega-industrial site will be underwritten by NY state subsidies and facilitated by NY state permits and policy - which means it should benefit NY residents and the community it resides in completely and immediately. There is no existing evidence of data centers benefitting any communities in which it resides and we will not be guinea pigs for this short-sighted experiment.

A data center at STAMP directly threatens the Nation's way of life, its continued existence on its homelands, and its treaty rights, which is cause enough to see the folly in any consideration of this facility.

The community deserves leaders that listen to the needs of their many constituents and does not bend to the reckless few who stand to gain - to deplete the land and community of resources that could be used otherwise to benefit those who are local.

This will not stand and anyone permitting it will have committed serious ethical crimes against those who entrusted them to lead with dignity and honor.

Respectfully,
Sarah Kiessling
Genesee County, NY

Sincerely,

Sarah Kiessling

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

K

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

The environment, nature, wildlife preservation and protection have been and are very important in my life. For years I lead G.S. troops incorporating the importance of these entities in our lives. Those individuals who are in favor of putting a monstrosity in the Town of Alabama in the form of a Data Center have no regard for the environment, nature or wildlife. Those individuals do not want the Data Centers in their back yard don't put it in ours to jeopardize our future generations and /or the environment, nature and wildlife.

Sincerely,

Janet Smith

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Environmental impact is to high risk for this project.

Sincerely,

Scott Mazurkiewicz

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Becky Sillasen

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

The track record for these kinds of data centers is alarming. They bring jobs and economic growth but also long term degradation for the community and the environment, We need stronger regulations before approving additional centers.
I urge you to VOTE NO on this center.

Sincerely,

genevieve christy

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Grotesque NO DATA CENTER protect our environment.

Sincerely,

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

streampublichearing@gcedc.com

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

The siting of this data center complex was ill-conceived, and the project should be shuttered if it requires a $1.46 billion subsidy to even continue. We value our priceless water, land, and neighbors and will continue to fight to stop this environmentally destructive and risky project. STAMP violates the sovereignty of the Tonawanda Seneca Nation and their way of life that holds the land and water sacred.

Sincerely,

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I am concerned: How will the building and long term operating of such a huge center, while offering promises of large scale AI - conveniences and internet advances, be able to compensate for the negative impact on the environment or the wellbeing of people given the astronomical

amount of energy required to operate such a center, combined with the loss of jobs, and the loss of environmentally fruitful land?

Sincerely,

Barbara B D Gilbert

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

mary filippo

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I am AGAINST the building of a data center in my state. Data centers have been proven to raise electricity cost and pollute precious water ways. Keep this shit out of NY! We don't want AI— we want a livable planet!

Sincerely,

Kellie Beck

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

streampublichearing@gcedc.com

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

This data center plan is not good for Western New York. Large demands for energy and water usage. Public health and environmental impacts, including impacts to wetlands. It also harms the Seneca Nation lands. Take care of people and the environment. This is not a good deal for the people of New York.

Sincerely,

streampublichearing@gcedc.com

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

streampublichearing@gcedc.com

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

streampublichearing@gcedc.com

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

streampublichearing@gcedc.com

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

streampublichearing@gcedc.com

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

WRONG, WRONG, WRONG- and Hochul needs to STOP this NOW! This and any other 'data' center is NOT good for New York, Further, when private equity/hedge funds are involved- it is WORSE- NO-NO-NO!!! WE New Yorkers are already paying too much for energy, It is harming our climate law- this will only make it worse. STOP THIS CRAP! NO! Apollo and their cohorts need to be SHUT DOWN!

Sincerely,

stacy rauch

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Data centers are environment disasters. As a NY resident I want to see NYS land preserved and cared for responsibly not decimated by pollution and development.

Sincerely,

K Yale

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

streampublichearing@gcedc.com

I request that the studies be independently conducted by a 3rd party for maximum accuracy and reliability of data for all the participants/parties mutual acceptance. This issue impacts many people and geographic lands and water systems. Let's prioritize the sovereignty of people, land and water resources that are constantly being eroded for generations to come for "said progress" but at whose cost and for whose profit ! Most Sincerely Luz M Velez

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Protect our Environment and keep our children safe

Sincerely,

Lynn Beber

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Geraldine Finazzo

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Linda Brisson

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

streampublichearing@gcedc.com

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Diane Englander

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Reka Baumann

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

A massive AI data center which is a part of the Western New York Science and Technology Advanced Manufacturing Park (STAMP), is proposing a mega-industrial site right next to the Tonawanda Seneca Nation. This data center at STAMP directly threatens the Nation's way of life, its continued existence on its homelands, and its treaty rights as well as New York's precious water and environment.

Sincerely,

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

streampublichearing@gcedc.com

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Upstate New York was the birthplace of IBM & long hosted such tech innovators as GE, Kodak & Xerox, as well. These giants of their time were built on efficiency. Data Centers, however, are voracious users of electricity & irretrievable fresh water. These hot energy vampires produce few long term jobs & instead creat long term environmental & economic damage the Empire State & its residents do not need.

Sincerely,

Bruce Rosen

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Jessie Behm

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I would also like to point out that the purpose of this data center - generative AI - has demonstrated little to no public social good. It relies on practices of copyright and privacy violations in order to scale, has gobbled up enormous investment thus far without any guarantees of future return or profit, and is now directly harming our progress in combating climate catastrophe. The public has no need for this technology, and have been making their wishes known through many protests against data centers. New York State's money is far better spent on efforts that have evidence-based successful outcomes, and

that directly benefit the local community. Please demonstrate the kind of thoughtful leadership that is so sorely needed in this moment and say NO to this data center.

Sincerely,

Melissa Sions

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

streampublichearing@gcedc.com

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

streampublichearing@gcedc.com

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

To the people responsible for the planning of this data center. Where do you live? What is your quality of life? What's it like when you go outside your home. Enjoy your backyard. Patio. Balcony. Stars in the sky. Trees. Peaceful sounds. Sounds of nature. Do you have an abundance of clean water? How is the wildlife? Does your house or property have value? You are taking this away from the people in this small community and the surrounding area. It's disgusting. Would you be willing to put up one of these things next to your mansion? Of course not. What I want to know is where are the DEC and the agencies in

charge of protecting our wetlands. A national wildlife refuge should be if the upmost importance. All I can do is shake my head. This just sickens me.

Sincerely,

Donna Bonning

I just watched the video of the public comments that you put out from the public hearing on the STREAM Data Center held on March 19th. What a joke - there's barely a full sentence from any of the commenters! And there was a long, line of public commenters with plenty to say at this event. The local community deserves better. This is just another example of GCEDC being disingenuous in a long series of GCEDC trying to weasel out of public scrutiny. Shame on you.

Sincerely,

Subject: SEQRA Comment - Clarification Needed on Crosby/Lewiston Roundabout Depiction

I am submitting this comment for inclusion in the SEQRA record for Project Double Reed.

During the March 19, 2026 public hearing, STREAM's presentation included a site plan graphic depicting a roundabout at the Crosby/Lewiston Road intersection. This depiction appears inconsistent with GCEDC's March 17, 2026 correspondence, which stated that "that intersection and conceptual roundabout needs to be reviewed in the context of the GEIS." The GEIS did not analyze a roundabout, a relocation of the intersection, or the associated disturbance area.

Because the roundabout image was presented to the public as part of the project context, I request clarification in the SEQRA record as to whether:

1. the roundabout is part of the Project Double Reed SEQRA review,
2. the roundabout is not part of the current SEQRA review and the image was included in error, or
3. the roundabout is being represented as a planned improvement despite not being evaluated in the GEIS, the 2016 Findings, or the 2024 Negative Declaration.

This clarification is necessary to ensure the public record accurately reflects what is — and is not — under environmental review.

Thank you, Anne Bacon 1183 Lewiston Rd., Alabama NY

Subject: NO STAMP PLANT NO MONSTER DATA CENTER IN GENESEE COUNTY

My name is Dennis Alton and I am a resident of Batavia NY. My entire life I have grown up around STAMP Plant. When I first heard about it, I was 13 delivering Newspapers, I am 31 now. There have been zero jobs created. This abomination of a site is placed right next to the Tonawanda Seneca Indian reservation, which is a pretty blatant violation of the 1794 Treaty of Canandaigua. This data center is anticipated to cost $20 billion and only create 125 jobs. What a joke. $11.5 million per job, not even an evil super villain could concoct that type of economics.

While we're at it, let's run the numbers. 500 MW of power, which is 25% of all the power generated from the Niagara falls. 900 acres of property so some rich jerk can make more money off the backs of regular folks. Last I checked you can't eat a data center, you can't drink a data center. Genesee County is immediately losing off on $600 in tax revenue, and the city of Batavia is losing $100 million in tax revenue. All this to save the failing STAMP Plant. I don;t want my hard earned taxes going towards this.

Apollo Global Management is the private equity firm financing this project, two of their CEO's have ties to Epstein and are in the Epstein Files. Both Leon Black and Mark Rowan. I don't want anyone that had something to do with Epstein coming to my community.

I oppose this plan for a number of reasons, our electric bills will increase, this is a total waste and the GCEDC is a disgrace. There will be pollutants coming into our ecosystem, it encroaches on the Indian Reservation. This would scare all of the wildlife and deer. All so what? Big Tech and Epstein's buddies can come to town and spin hard drives. No thank you.

If you need any more clarification on where I stand with this Data Center and the STAMP Plant, please feel free to contact me 631-741-7973

NO STAMP PLANT! NO DATA CENTER!

Dennis Alton

To Whom it May Concern,

I am writing to express my strong opposition to the construction of a data center at STAMP, for a number of reasons. This project seems poorly thought out on numerous levels. The extensive subsidies for a for-profit business that would only create 125 jobs (allegedly) seem to make no sense, especially given that this project would take up a large portion of STAMP's land and electricity and the site is supposed to support 9,000 jobs. It also seems inadequate work has been done to ensure this proposal does not harm

the abutting Tonawanda Seneca Nation, and from my limited knowledge it seems clear that the noise, light, water, and other pollution would directly impact the Nation. As a resident of Monroe County, I am also very concerned with the impact on MCWA, especially at a time when utility bills are through the roof. It seems the SEQR process still has much to do, and I suspect a full review of this site's environmental impact and cultural impact would yield results that are not good for the project. Overall, this project seems poorly thought out, and I struggle to see how it could be justified to sink over a billion dollars into it for little public good and potential great harm.

Sincerely,

Carlton Huff

Subject: Data Center Comments

I am very concerned about how we are treating our environment. STAMP should never have been located in the middle of an area with little to no infrastructure for manufacturing when there are empty buildings and available infrastructure in other parts of western NY. It is an area that is a habitat for birds and wildlife with a national wildlife management area and several state wildlife areas and we are rapidly losing our birds and wildlife in a 6th extinction. It is also adjacent to the lands of the Tonawanda Seneca Nation. The New York State guidelines for smart growth development were not followed when this site was selected with a goal of providing 9000 jobs.

STREAM US Data Centers has proposed to build a monster 2.2 million square foot data center which would use 500 megawatts of electricity per year, 20,000 gallons of water per day and create millions of gallons of wastewater, all to create only 125 jobs. The infrastructure for the water, electricity and wastewater do not even exist there after all this time. STREAM US Data Centers is asking for incentives of $1.4 billion in tax abatement, over $11.5 million per job, one of the largest subsidies ever awarded in NYS. This project is not a good financial investment for Genesee County or Western NY.

The adjacent Tonawanda Seneca Nation should not have to suffer the incessant noise that this project will generate and the noise will affect the nation's ability to hunt game in their Big Woods. They would also be negatively affected by air pollution from the 114,000 gallons of fuel burned by their backup generators each year and electric rates are expected to go up for residents.

GCEDC must do a thorough SEQR analysis including noise, water impacts, traffic, and air emissions from both the construction and operations of the data center and take into account the cultural and environmental justice impacts to the Tonawanda Seneca Nation in consultation with the Nation, NYS DEC and the NYS Historic Preservation Office. This area is too important to have its environment ruined by a data center for the sake of a mere 125 jobs.

Subject: Public Comments from THE POINT CDC

To the Genesee County Economic Development Center (GCEDC):

My name is Leslie Vasquez, and I'm an Environmental Justice Organizer at THE POINT CDC. We are dedicated to youth development and the cultural and economic revitalization of the Hunts Point section of the South Bronx and prioritize community-led initiatives all over NYC. We offer a multi-faceted approach to asset-based community development through environmental justice, youth engagement and arts and culture.

We submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

Our organization is committed to the just implementation of the Climate Leadership and Community Protection Act. The proposed data center lies within a Disadvantaged Community, as designated by the Climate Justice Working Group, which subjects this project to review under the CLCPA. Per Section 7(3) of the law, in considering and issuing permits, licenses, and other administrative approvals and decisions, all state agencies, offices, authorities, and divisions shall not disproportionately burden Disadvantaged Communities. Given the threats posed by this project to the Tonawanda Seneca Nation which lies within this Disadvantaged Community, and our overarching respect for Indigenous sovereignty, we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of NYS Department of Environmental Conservations' recommendations with respect to the SEQR environmental review process, and call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts;

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public; and

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation. It also threatens our Climate Law and violates the sovereignty and way of life of the Tonawanda Seneca Nation.

In closing: we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of DEC's recommendations with respect to the SEQR environmental review process, and call on GCEDC to reject the incentives application from STREAM US Data Centers.

Sincerely,

Leslie Vasquez

Subject: Public Comment on STREAM US Data Centers' STAMP Data Center Complex

To the Genesee County Economic Development Center (GCEDC):

My name is Taylor Jaffe, Program Manager at Catskill Mountainkeeper. Catskill Mountainkeeper is a nationally recognized advocate for the Catskill Region. Working with a diverse network of more than 25,000 concerned citizens and strategic partners, Mountainkeeper protects the Catskill Park and region by supporting policies and strategies that safeguard its natural environment and promote sustainable, resilient and just communities.

We submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

Our organization is committed to the just implementation of the Climate Leadership and Community Protection Act. The proposed data center lies within a Disadvantaged Community, as designated by the Climate Justice Working Group, which subjects this project to review under the CLCPA. Per Section 7(3) of the law, in considering and issuing permits, licenses, and other administrative approvals and decisions, all state agencies, offices, authorities, and divisions shall not disproportionately burden Disadvantaged Communities. Given the threats posed by this project to the Tonawanda Seneca Nation which lies within this Disadvantaged Community, and our overarching respect for Indigenous sovereignty, we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of NYS Department of Environmental Conservations' recommendations with respect to the SEQR environmental review process, and call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts;

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public; and

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation. It also threatens our Climate Law and violates the sovereignty and way of life of the Tonawanda Seneca Nation.

In closing: we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of DEC's recommendations with respect to the SEQR environmental review process, and call on GCEDC to reject the incentives application from STREAM US Data Centers.

Sincerely,

Taylor Jaffe

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Please reject the application for this egregiously destructive Data Center. As someone who frequents the Iroquois National Wildlife Refuge, it breaks my heart to imagine what will happen to the land, the animals, and the people who live nearby. By now, there is ample and clear evidence of the detrimental impacts that these data centers have on their surroundings, in terms of air pollution, water run-off, noise pollution, and water and energy usage (as supported by Cai et al (2025) and Han et al (2024)). The fact that the proposed construction is next to the land of the Tonawanda Seneca Nation is a travesty. It should be utterly out of the question to even consider further imposing and infringing upon the rights and

sovereignty of indigenous people and their land -- and make no mistake, this would be a horrific imposition on their way of life and their well-being. There is no way in which this project "develops" anything for our county, for our economy, or for the living beings that actually reside here. It will tremendously monetarily benefit a very, very few people. It will not vitalize our communities, it will purely bring destruction and disruption to all of the life around it. There is no way in which this project will meaningfully benefit the people of Genesee County, especially in contrast to the toll it will take on all the living systems around it.

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

streampublichearing@gcedc.com

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

The STAMP Project is an embarrassment to the NYS energy, environmental, and Indigenous policies.

The project prioritizes profit over people, health, and treaties.
Gov. Kathy Hochul must step up as a leader and treaty partner to stop this project. This project is just latest in a long line of policies that abandon the WNY region as an environmental sacrifice zone. This project will not revitalize the economies of WNY, it will not undo the generations of deindustrialization---it will only bring harm.

Sincerely,

Delaney O'Connell

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I am a resident of the GLOW region and priest for the five-parish Genesee Regional Initiative of the Episcopal Diocese of Western New York. I/we are 100% opposed to the STAMP project and especially to the proposed data center. There is NOTHING about this project that is good, right, or even moral.
The location is environmentally unconscionable (proximity to the Iroquois Wildlife Refuge and other protected lands), and encroaches on 'sacred ground' for the Tonawanda Seneca Nation.
The proposed development would cause air and water quality degradation, as well as noise pollution.

Electric bills for everyone will go up.
As if all of that weren't enough for you to "say NO to Stamp and the data center proposal, the cost/benefit ratio between the requested tax-payer incentives and job creation is laughable. They are asking for $1.46 billion in tax relief to create approximately 125 jobs. That's $11.7 million per job.
The current population of Western New York is 2,800,878. You could take that money and give every man, woman, and child in WNY $521 and do more for the economic development of the region, without pollution, without encroaching on Native lands, and without raising anyone's electric bills!
The reasons to be against this project seem so self-evident that I can't understand why we're even considering it - why it's even necessary to protest against it. And then I learned that money talks - the GCEDC would receive a minimum of $145.9 million in fees from this deal. And there are rumors circulating that 'donations' have already been made to school districts, etc. Maybe those stories are just that - rumors. But maybe they have substance. We'll probably never know for sure. What we DO know for sure is that this proposal is bad for the environment, bad for the region, bad for electric bills, bad for water quality, bad for the Tonawanda Senecas, and bad for Western New York.
I implore the people with decision-making power over us and over the environment, to do the right thing and say NO to this proposal.
(The Rev. Canon) Barbara J. Price

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers and I demand that the GCEDC issue a positive declaration for STREAM US Data Centers' SEQRA application and, pursuant to recommendations from the NYS Department of Environmental Conservation: 1) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP; 2) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes to plans for the site since 2012; 3) Conduct SEQRA review that includes detailed construction impact analysis and detailed operations impact analysis; 4) Incorporates consideration of the results of the noise study that STREAM is currently undertaking; and 5) incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation including input from the Nation, DEC and the State Historic Preservation Office on those impacts.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

As a young person originally from the Finger Lakes, I am weighing whether to return to the Finger Lakes to start my family. A huge consideration for me is around the environmental and social wellbeing and outlook for the region. I am vehemently opposed to AI and the introduction of data centers in communities like mine, especially given the adverse effects this project will have on the Tonawanda Seneca Nation. STAMP ought to prioritize the wellbeing and longevity of our region over the short-sighted financial interests that will impose drastic financial, health, and cultural costs on consumers.

Sincerely,

Hannah Reynolds

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers and I demand that the GCEDC issue a positive declaration for STREAM US Data Centers' SEQRA application and, pursuant to recommendations from the NYS Department of Environmental Conservation: 1) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP; 2) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes to plans for the site since 2012; 3) Conduct SEQRA review that includes detailed construction impact analysis and detailed operations impact analysis; 4) Incorporates consideration of the results of the noise study that STREAM is currently undertaking; and 5) incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation including input from the Nation, DEC and the State Historic Preservation Office on those impacts.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

My name is Kathryn McKinney and I live in the Village of Medina. Please consider the profound impact your decision will have on the people in our local communities and the way of life of the Tonawanda Seneca Nation. Choose compassion over profit. There is already more than enough extraction taking place around the world, often at the expense of innocent lives. This is a decision that will stay with you, and I hope it's one you can stand by with integrity.

Sincerely,

Kathryn McKinney

Subject: Data Center. Alabama, NY

Anyone considering voting for the data center, in Alabama, NY, should go to North Tonawanda, NY, and visit the data center there. Located at 1070 Erie Avenue, it consists of two (2) hundred yard long banks of computers, 20 feet high, like two double stacked trains riding on parallel tracks.

I drove within fifty (50) yards of the data towers. The noise was deafening as I rolled down my car window. How would anyone want to live or work near such a monster? I could only imagine the amount of electricity coming off the public power grid to run this mammoth facility.

Please vote no on this project. Leave the birds and wildlife alone.

To whom this may concern,

I do not want my tax dollars to be funding the hurt of my indigenous neighbors. Let alone for my tax dollars to subsidize a data center that we do not need. This rule is a travesty and if it is passed it will greatly harm our community and our great state.

Best,
A concerned citizen

Sincerely,

Tzvi Weisberger

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers and I demand that the GCEDC issue a positive declaration for STREAM US Data Centers' SEQRA application and, pursuant to recommendations from the NYS Department of Environmental Conservation: 1) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP; 2) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes to plans for the site since 2012; 3) Conduct SEQRA review that includes detailed construction impact analysis and detailed operations impact analysis; 4) Incorporates consideration of the results of the noise study that STREAM is currently undertaking; and 5) incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation including input from the Nation, DEC and the State Historic Preservation Office on those impacts.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Jariely rodriguez

Message :	Every single one of you should be ashamed for bringing this disgusting data center to Genesee County. Is there a blank check for this data center, it seems every day I read the Batavian and the figures keep increasing. We, the people aren't receiving anything from this. Just to spin hard drives we are going to put 20 billion into this. We are going to put this right next to an Indian reservation, which not for nothing Genesee County has already been sued regarding dumping drilling fluid into the federally protected wetlands. No one wants this. Why can't we just blow up the entire STAMP Plant, and investigated for fraud. My entire life there has been companies claiming they are coming and not a single job

has been created by STAMP. But in order to save face you want 20 billion dollars worth of spinning hard drives? Really? You all live in the community, you're all going to have to live with the noise, and the increased electricity rates. I just read in the NY Times, the trade off is 11.2 million per job, which will make maybe $80,000. That's considered a success to you? This won't create jobs, it will only create temporary construction jobs. I also just read that the owner of Stream is the Apollo Global Management Group, not only is Private Equity disgusting. This firm the owner has ties to Jeffrey Epstein. You guys really want someone who is in the Epstein Files involved with anything in Genesee County? Again, you all should be ashamed. I'm glad STAMP is getting national headlines. In Genesee County, WE DON'T WANT THIS!

We will be at the meeting on 3/19/26 to make our voices heard. I am also contacting my state representatives to nix this proposal. We do not need this type of industry in our communities. It is bad enough that we have all the solar farms. Enough is enough!

From: Sean S. Evans <Evans.Sean.S@gmail.com>
Sent: Sunday, March 8, 2026 7:16 PM
To: streampublichearing@gcedc.com
Subject: STREAM U.S. Data Centers, LLC

I am writing to express my disapproval of the Stream Data Center Project. This project does not fit in with what GCEDC marketed the STAMP site to be. There should be no incentives for a Data Center to be built as it provides very minimal job growth and taxes our infrastructure. I know on the website that it claims to not increase our energy cost as it is tapping into"existing capacity". Being very familiar with the electrical grid, I know this to be false. The fact that in my most recent electricity utility bill for February, I am paying upwards of $0.40 per kWH, it shows there is not enough generation capacity available. This data center will be guaranteed electricity rates well below the consumer rate and will eat up regional capacity despite what the website says. This will lead to further subsidies through the other rate payers on the system, and for what? Maybe 100 jobs. There is no way that data center creates 100 jobs. The GCEDC is supposed to create lasting benefit to the region. This project is not doing that. In fact it will do the exact opposite.

Please take my comments under advisement and do not allow the data center to move forward.

Thanks,
Sean Evans

Subject: Comments, Concerns

Dear [Recipient Name],

My name is Adrienne Yocina. I live in Genesee County and will be significantly impacted by the proposed data center at STAMP.

I am deeply concerned about the well-being of my elderly and disabled neighbors on the Tonawanda Seneca Nation. Specifically, I am worried about the potential for fire or catastrophe and the possibility of slower EMS response times resulting from this project.

Additionally, I am concerned about the financial impact. If electric rates increase to pay for infrastructure that is only necessary because of this data center, many residents will be unable to afford to stay in their homes. It is unethical to expect struggling community members to shoulder these costs.

As a resident, I am requesting that the upcoming public comment period allow at least 10 minutes for each speaker to ensure everyone has a fair amount of time to be heard. It is unlikely that most would use that much time, but certain people just might need it. It is important that we can hear each other's concerns as a whole group, similar to the first public comment session. Please ensure the event does not conclude until everyone who wishes to speak has had the opportunity to do so.

Finally, I am curious about the consistent presence of the Sheriff at these meetings and would appreciate clarification on why those resources are being utilized in this manner.

Thank you for your time and for considering my comments.

Sincerely,

Adrienne Yocina

Subject: No to Stream

The data center will not employ the 9000 jobs GCEDC has offered up in their original pan for STAMP. Tax incentives are not necessary for these multi billion dollar companies.
The endangered short eared owl nests on the ground. The owl hunts during the day and the noise and vibration will definitely affect the owl's population. The population has decreased by over 30% since 2010 when the STAMP idea started. The Iroquois National Wildlife Refuge and surrounding areas are protected vital Important Bird Areas. Migrating species will be affected. Our beloved eagles will be affected. Our electric bills will be affected.
The Wildlife, water and land will be polluted.
The Tonawanda Seneca people need respected.

NO DATA CENTERS!!

Hi. Read through your updates and responses and have not seen a response to studying, tracking, and managing low frequency noise. Please address this as it is a common problem with data centers.

Also, please change the format of your community meeting to both present your plan for the area and have a formal q&a session.

Thank you.
