4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Jennifer Maloney

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Please, not here. Listen to the Tonawanda Seneca Nation.

Sincerely,

streampublichearing@gcedc.com

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: Organizational comment in opposition to the STAMP data center

To the Genesee County Economic Development Center (GCEDC):

My name is Ken Schles, a senior environmental organizer at Rise and Resist. Rise and Resist is a community based, nonviolent direct action group made up of both new and experienced activists committed to opposing, disrupting, and defeating government, corporate entities that threaten democracy, due processes, equality, and civil liberties. We are centered in NYC, but have been active in organizing numerous state and federal campaigns that have drawn in over 100,000 participants.

We submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

Our organization is committed to the just implementation of the Climate Leadership and Community Protection Act. The proposed data center lies within a Disadvantaged Community, as designated by the Climate Justice Working Group, which subjects this project to review under the CLCPA. Per Section 7(3) of the law, in considering and issuing permits, licenses, and other administrative approvals and decisions, all state agencies, offices, authorities, and divisions shall not disproportionately burden Disadvantaged Communities. Given the threats posed by this project to the Tonawanda Seneca Nation which lies within this Disadvantaged Community, and our overarching respect for Indigenous sovereignty, we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of NYS Department of Environmental Conservations' recommendations with respect to the SEQR environmental review process, and call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts;

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that construction is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public; and

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation. It also threatens our Climate Law and violates the sovereignty and way of life of the Tonawanda Seneca Nation.

In closing: we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of DEC's recommendations with respect to the SEQR environmental review process, and call on GCEDC to reject the incentives application from STREAM US Data Centers.

Sincerely,

Ken Schles,
Senior Environmental Organizer
Rise and Resist

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

streampublichearing@gcedc.com

No Tax Abatements for Data Centers
There need to be Tax Penalties paid in advance before anything is built to cover the Billions of dollars of damage that will reach further than Rochester
No Data Centers in New York State

Sincerely,

Laura Weiland

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Michael Patenaude

Data centers are massive polluters. Our communities are being encouraged to build them by billionaire tech industry figures who create and control hardware and software that harm children and adults. In this young tech industry, there has never been any real accountability. The harms continue.

Communities across the USA are pushing back against these massive, environment wrecking data center projects. The people do not want to see their communities sickened simply because the state decided to invest resources in the self-interest of individuals who do not care about our families, and donate the money they make from us to authoritarian governments at home and abroad.

If the data center must be built, it should not be built anywhere near a sovereign indigenous nation that did not ask for it and wants nothing to do with it.

Honor the treaties.

Sincerely,

Brendan Flake

Sent: Thursday, April 16, 2026 9:12 AM
To: streampublichearing@gcedc.com
Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Mark Hughes

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Kayla Davis

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

I do not support this data center

Sincerely,

Emma Crooks

It seems that everyone has forgotten that NYS bought the oak Orchard wildlife preserve in the 30's to keep it as a protected wildlife refuge? The federal government bought the Iroquois National Wildlife Refuge was established in 1958 for what to protect it!! Wake UP! Stop this political destruction of what was put aside to protect it from groups like GCEDC!! NOT IN MY BACK YARD!!

Sincerely,

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Joe Mentel

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Wholely uninterested in large data centers coming into our state. Vehemently opposed if it also is bordering on native land.

Sincerely,

Shalimar Lake

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I was outraged to learn that GCEDC has uploaded a new revision of the SEQR application and supporting documents to the GCEDC website sometime between April 7 and April 8.

I demand that GCEDC further extend the date of the deadline for written comments, and re-set the date of the supplemental hearing for a time when it is reasonable to expect that those who would be most impacted by the data center complex have had a chance to review and produce meaningful comment on the new materials.

You must show greater respect for public participation in this review process. The stakes of this proposed project - in terms of impacts to our environment, public health, economic well-being, and quality of life - are simply too high.

Sincerely,

Karen E. Smith

This proposed data center is a very bad deal for Genesee County and its residents. The very few benefits are far outweighed by all the negatives. Why have this undisclosed company come here and hand them so many incentives when the costs to the area are far greater than what they will add to our economy. You need to be diligent to protect your citizens and their wishes rather than kowtow to billionaires with

very negative proven connections. I'm afraid the $146 million you will receive has greatly blinded you to all of the bad aspects of this project. The people say NO! That should be enough!

Sincerely,

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

No Tax Abatements for Data Centers

There need to be Tax Penalties paid in advance before anything is built to cover the Billions of dollars of damage that will reach further than Rochester
No Data Centers in New State.

Sincerely,

Lacey Inzana

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Robyn Moutray

Our grid is taxed enough, and speaking of taxes I don't want mine going to subsidize data centers and prop up private equity firms. While this proposal directly threatens the Tonawanda Seneca Nation and their bioregion, make no mistake that it is not only them who are against it. The vast majority of constituents disapprove of this proposal and ones like

it. https://news.harvard.edu/gazette/story/2026/04/why-are-communities-pushing-back-against-data-centers/

The STAMP has been an issue from its very inception. It was poorly located for manufacturing without access to transportation other than rural roads, no power, limited water resources . Being on the county' s edge impacting the Nation and Orleans county adversely was another example of poor judgment.

Now the residents are being asked to literally fund these errors with tax abatements for a billionaire company that will destroy our environment and quality of life for years to come,
It is time to listen to the public not the sound of possible monies flowing to your bank account.

Sincerely,

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

No tax abatement for data centers! Make them pay to use our infrastructures,electric, water, and sewer !

Sincerely,

michelle hess

Absolutely not. No data centers in NY. Our people, water, land and air are way more important than AI and a few already rich men getting richer. Please don't let this happen.

Sincerely,

Shannon Weiland

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Christina Moorhouse

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

This is a reckless endeavor that benefits nobody, but big tech and the criminally rich people backing it. This is a waste of space, would jeopardize grid stability, spike energy costs for residents of the region, encroach on Tonawanda Seneca Nation land, and permanently threaten crucial biodiversity in the bioregion. The exorbitant costs that would fall to taxpayers are despicable. That's money that could go towards health care, investing in programs to combat food insecurity, funding school programming, building public transportation infrastructure, etc. The 2.2 million sq ft. should be used for something that the residents want, that support and strengthen our communities in a positive, palpable way. We should

not be inviting in a money-hungry firms with little interest in how they leave the space when all is said and done. GCEDC can give all the lip-service they want about consulting with the people, but the people are speaking and the answer is a resounding NO TO STAMP

Sincerely,

Nicola Bruno

Subject: STREAM US Data Centers LLC Public Hearing

Hello I am writing as a current Rochesterian but lifelong western NYer and I strongly oppose the develop of a data center in nearby Genesee County. These developers say the project ,"ensures the campus will remain a quiet, clean, and high-value neighbor" but what proof have they provided and why would this council take their word for it when we have example after example in other parts of the US that show the harm caused to the health of local communities and environment? Do you want to be responsible for the loss of farm land and community health in exchange for nominal, temporary job increases , drop in property values , pollution of air and water, etc.? I have a Master's in Environmental Geoscience, I have seen not only the public health data but environmental data and I do not agree that the potential economic gains for the region are worth the sacrifices. Find another way.
Sincerely,
Katherine Gregory

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

No data centers, the noise pollution and pollution of our communities water sources in addition to the strain and cost increases for all local town and city electricity needs are all UNACCEPTABLE. These data centers bring in a NEGLIGIBLE amount of low paying jobs, there are multiple reasons why the billionaires and private equity firms behind these massive data centers want them built ANYWHERE but their own backyards. Tell them our backyards are also off limits.

Sincerely,

Matthew Cronenberg

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

April 14, 2026

Dear Members of the Genesee County Economic Development Center,

On behalf of the approximately 400 members of the Seth Green Chapter of Trout Unlimited in Rochester, NY, I am writing to express our strong opposition to the proposed data center project at the Science and Technology Advanced Manufacturing Park (STAMP) in the town of Alabama, New York.

Trout Unlimited (TU) recognizes the rapid siting and expansion of data centers pose growing risks to cold water ecosystems. The buildout and operation of these facilities can strain freshwater resources, increase thermal and hydrologic stress on rivers and aquifers, and drive land conversion that fragments habitats and degrades the health of our waterways.

STAMP is not well suited for an installation of this magnitude. Siting this 2.2 million square foot mega data center there will cause serious detrimental effects on the adjacent wetlands, the Oak Orchard River watershed and ultimately Lake Ontario. These waters support substantial populations of rainbow and brown trout, King salmon, Coho salmon, Atlantic salmon, bass and many other fresh-water species. Hundreds of our members have fished this world-class resource for decades.

This data center also poses additional dangers to the fresh, cold water of the Oak via:

- Cooling water withdrawal
- Thermal disruption due to high, warm runoff from the extensive hard surfaces
- Groundwater contamination due to diesel fuel leaks
- Contamination from inadvertent sanitary wastewater discharge
- Wetland and tributary disruption from building a discharge pipeline to the Oak

Not to mention, the *millions* of gallons of water used daily by the utility company to generate the 500 megawatts of electricity necessary to power the data center. Where will this water come from? Where will it go? The MORE water used by industry = LESS water for fish.

In closing, I can sum up our members' collective feelings about this data center in five words:

IT'S A REALLY BAD IDEA!

Sincerely,

Aaron DeRuyter, President

Seth Green Chapter Trout Unlimited
PO Box 22994

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Christina Seilheimer

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Valencia Baldwin

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

PLEASE, PLEASE, see that this project is not going to create jobs, and will undermine local life. These centers and their owners are not our friends or supporters, AND THEY DO NOT NEED ANY TAX ABATEMENTS. I think you should kill the project, but if you do it, PLEASE do not allow/give them abatements: they are not necessary.

Sincerely,

Mark McDougle

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Christina Faticone

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

No data centers in our neighborhoods impacting our water supply, electricity and potential threats to future generations with very little job growth or income added to the area.

Sincerely,

Debra Good

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Megan Mihevc

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Jasmine Collard

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

It's suspicious that this project is being pushed through without proper environmental review and is being subsidized by me the taxpayer, when it offers multiple environmental threats and will surely drive up my utility rates. Plus it is being pushed to go into place next a Native American reserve, which is so typical of industrial exploitative projects. Put it next to the people who will benefit from it, like maybe Webster or hmm, Albany.

Sincerely,

Kenneth C Rich

No Tax Abatements for Data Centers!

There need to be Tax Penalties paid in advance BEFORE anything is built- natural systems are connected and billions of dollars of environmental damage (and higher costs for resident's utility bills) will reach Rochester and beyond.
No Data Centers in New York State!

Sincerely,

Marla Zyla

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Lane Serota

AI data centers are a blight upon the land, please, PLEASE don't let these into our area. It's awful for the environment and is just going to extract resources for our region. It will not help our region on the whole at all.

Sincerely,

Christopher R. Jones

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Sent: Wednesday, April 15, 2026 7:30 PM
To: streampublichearing@gcedc.com
Subject: Opposition to Financial Incentives request submitted by STREAM US Data Centers + Follow NYS Environmental Conservation Recommendations

To the Genesee County Economic Development Center (GCEDC):

My name is Kendall Allison, Board Member of the New York City Network of Worker Cooperatives. We are a network of worker owned businesses and organizations throughout New York City.

We submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

Our organization is committed to the just implementation of the Climate Leadership and Community Protection Act. The proposed data center lies within a Disadvantaged Community, as designated by the Climate Justice Working Group, which subjects this project to review under the CLCPA. Per Section 7(3) of the law, in considering and issuing permits, licenses, and other administrative approvals and decisions, all state agencies, offices, authorities, and divisions shall not disproportionately burden Disadvantaged Communities. Given the threats posed by this project to the Tonawanda Seneca Nation which lies within this Disadvantaged Community, and our overarching respect for Indigenous sovereignty, we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of NYS Department of Environmental Conservations' recommendations with respect to the SEQR environmental review process, and call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts;

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public; and

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of

the Tonawanda Seneca Nation. It also threatens our Climate Law and violates the sovereignty and way of life of the Tonawanda Seneca Nation.

In closing: we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of DEC's recommendations with respect to the SEQR environmental review process, and call on GCEDC to reject the incentives application from STREAM US Data Centers.

Sincerely,

Kendall Allison
Board Member

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Screw data centers...they are an environmental disaster and it's rich that something already well off is even asking for tax abatements...tax the rich!

Sincerely,

Munir M

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Please do not support the development of this data center.

Sincerely,

Jay Supnick

We absolutely need to slow our roll out of all these data centers. Studies are showing the developers are lying about energy and water usage. They're also showing a huge increase in surface temperature in the areas around data centers; that can affect everything from ecosystems to local economies around them. We need a moratorium on all AI development in NYS.

Sincerely,

AnnMarie Agness

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Stay out of New York

Sincerely,

Felicia Harrison

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Data centers cause long term damage to ecosystems, use a massive amount of resources, and bring no direct benefit to their community.

Sincerely,

Kathryn Womack

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Fuck AI data centers we don't need em.

Sincerely,

Chris Wroblewski

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Maureen ONeill

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Marisol Medina

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Samantha Schneider

No Tax Abatements for Data Centers
There need to be Tax Penalties paid in advance before anything is built to cover the Billions of dollars of damage that will reach further than Rochester

No Data Centers in New York State!!

Sincerely,

Jordan MacFarland

Remember all the warning about AI Data Centers and clean water? Not only are they trying to slip one in near us, they are offering State Tax Abatements for a Data Center that will ruin the clean drinking water, overtax the energy infrastructure leading to EVEN HIGHER ENERGY PRICES RIGHT HERE IN ROCHESTER.

Please take a moment to fill out this Petition. Please make sure that in the comment section you say:
No Tax Abatements for Data Centers
There need to be Tax Penalties paid in advance before anything is built to cover the Billions of dollars of damage that will reach further than Rochester
No Data Centers in New York starw

Sincerely,

Jessica Koch

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Sarina Serna

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Donna Dehmler

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Can't we slow down and decide what's best for our environment, for our every day citizens.... instead of feeling pressure to go forward with this project(s) for economic reasons. When money is the overriding factor, we, the people, always get short changed in the long run. Look at history.

Sincerely,

Evelyn Richy

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

As a life long New York State resident, I am disgusted but not surprised that our land is being sold off to such a harmful entity that serves nothing but to destroy us. NO MORE DATA CENTERS. The destruction this will create is non-reversible.

Sincerely,

Kathleen Matzky

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

This is a fiscally irresponsible project that my family on the Reservation, my friends, and my neighbors unilaterally do NOT want. I cannot register our concerns more strongly, and demand transparency as to which parties give you the authority to subvert my community's demands. Your unwillingness to identify your Operator or the actors involved is offensive and in violation of the community's rights over their land and their lives.

Sincerely,

Victoria A Guite-Williams

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Building a data center in an area that depends on farmland and limited water resources raises serious concerns that can't be overlooked. These facilities often require significant amounts of land, potentially displacing productive farmland and threatening local agriculture and livelihoods. Even more troubling is their heavy demand for water, which can strain already limited supplies, especially during dry seasons, putting both farmers and residents at risk. On top of that, data centers consume enormous amounts of electricity, placing added strain on the local power grid and potentially driving up energy costs for residents and small businesses. While economic development is important, it shouldn't come at the

expense of essential resources like food production, water, and reliable, affordable power. Prioritizing short-term technological growth over long-term environmental sustainability could leave lasting damage on the community.

Sincerely,

Kelly E Wolsiefer

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Kathryn Stith

No Tax Abatements for Data Centers
There need to be Tax Penalties paid in advance before anything is built to cover the Billions of dollars of damage that will reach further than Rochester

No Data Centers in New York State

Sincerely,

Chelsea Whittemore

The extra demands on our electrical grid and passing the costs off onto our electric bills is simply unacceptable. This will not create enough jobs to replace the drain on the community or the waste it will generate. This will harm our community.

Sincerely,

Lauren Hartley

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Ayrton Wilcox

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Protect the land please.

Sincerely,

Elio Lewis

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

No one wants anymore data centers. They are destroying the environment and communities.

Sincerely,

Selena Cruz

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Lucian Hammond

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I oppose the data center creation in Alabama, NY. As a 5 mile neighbor, I believe that this will negatively impact our communities, water, 24/7 noise, and light, and impact the power grid. As the wife of someone who works for the power company that supplies the energy claimed to power the center, I KNOW this will impact local neighborhoods. Please, DO NOT create this data center in our quaint community.

Sincerely,

Kayla Wdowka

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I oppose any Tax Abatements for any Data Centers.

Our power bills are unaffordable as is!! We can't afford to let data centers guzzle our energy and water.

STREAM has no plans for air pollution permits, e-waste disposal, wastewater treatment, or studies analyzing the impact of their noise on the health of the people living in the vicinity of the proposed data center. The proposal as is, is irresponsible at best, and at worst, a wanton destruction of native land and water, as the proposed site sits just upstream of the Toniwanda Seneca Nation and our drinking water source.

Don’t poison our water

Don’t poison our land

No data centers in NY State

Thank you!

Sincerely,

Madeline Bohl

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Abaigeal Drury

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

STOP!

Sincerely,

Steve Bass

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: STREAM US Data Centers LLC Public Hearing
Attachments: Blair et al.pdf; Nguyen & Green, 2025.pdf; Comments for public record, Tinelli, 2026.docx

Good afternoon,

I am writing as a concerned community member to formally object to the approval of the STREAM U.S. Data Centers, LLC project at the STAMP site in Alabama, NY.

My written comments for the public record are attached and incorporated by reference, together with supporting documents:

- Nguyen & Green (2025). What happens when data centers come to town? *University of Michigan*.
- Blair et al. (2018). Residential noise. *Journal of Exposure Science & Environmental Epidemiology,*

I am submitting these comments in my personal capacity as a researcher and my submission does not necessarily represent the views of my academic institution.

My comments reflect the factual discrepancies and omissions within the applicant's own submitted documents. The public hearing record already contains credentialed scientific testimony identifying more than 20 NYSDEC-flagged stormwater deficiencies, a formal objection from the Tonawanda Seneca Nation citing treaty rights and absence of consultation, and a documented pattern of Freedom of Information Law non-compliance. The findings I have attached document specific evidence that the application as submitted is incomplete and internally inconsistent.

The GCEDC cannot make an informed determination of significance — and this board cannot responsibly vote on financial incentives — until these discrepancies are resolved on the record.

I respectfully request that these comments and the attached documents be entered into the administrative record in full.

Sincerely,
Lisabeth Tinelli, PhD
Email: liz.tinelli@rochester.edu

Written Comment for the Public Record
April 15, 2026

My name is Dr. Lisabeth Tinelli, and I am submitting these comments for the written record in my personal capacity as a researcher. I reside in Monroe County, and learned of the Genesee County data center proposal on April 12, 2026, just days before this hearing. I raise this not as a personal grievance but as a concern regarding adequate notice to impacted community members. The proposed facility will draw 500 megawatts from a regional grid, consume 20,000 gallons of water per day, generate 10,000 gallons of wastewater per day, and generate air emissions and noise affecting communities well beyond Genesee County. A project of this regional scale warrants notification to all communities it will impact, not just within the municipality where it will be built.

I have reviewed STREAM U.S. Data Centers' own technical submissions — Exhibits K, L, N, O, and S (retrieved April 13, 2026 from https://www.gcedc.com/projects) — and I am asking this board to require answers to specific, documented discrepancies before any vote on financial incentives or project approval.

Recommendations
In alignment with the demands submitted by petition to this board, and supported by the specific documentary evidence set forth below in Sections I-IV, I respectfully request that GCEDC:

1. Reject the financial incentives application until the structural deficiencies identified are resolved. The application as submitted contains internal contradictions across its own technical exhibits that prevent any meaningful evaluation of the project's environmental, fiscal, or public health impacts (Section I).

2. Issue a positive declaration under SEQR and require a Supplemental Environmental Impact Statement specific to hyperscale data center operations at this site. The 2012 GEIS did not contemplate a 2.2 million square foot, 500-megawatt hyperscale data center. Relying on it does not satisfy the hard look requirement of 6 NYCRR § 617.7 (Section II).

3. Require that the applicant file a single, consistent, enforceable project description by specifying generator count, chiller count, fuel storage volume, and equipment configuration that is identical across the EAF, the air permit application, and all acoustic and environmental modeling, before any determination of significance is made. The current record contains at minimum two materially different facility configurations with no enforceable mechanism to hold the applicant to either (Section I).

4. Require independent technical studies — not vendor-guaranteed or applicant-commissioned analyses — on the following before SEQR review is completed and made available for public comment (Section I):

- dBC and octave-band acoustic analysis including infrasound assessment at all residential receptors and the Tonawanda Seneca Nation boundary
- Quantitative groundwater drawdown modeling including peak GPM, drawdown radius, and acre-feet projections with specific analysis of impacts on private wells and the Nation's water supply
- Independent stack testing to verify that Tier 2 engines with aftertreatment achieve Tier 4 emission standards under real operating conditions
- Resolution of the 20+ stormwater deficiencies identified by NYSDEC in February 2026 (Section II)

5. Require submission of the completed SPCC plan before any vote on financial incentives or project approvals. A facility storing up to 114,000 gallons of on-site diesel cannot be evaluated for environmental adequacy without a completed spill prevention plan filed under 40 CFR Part 112 (Section I).

6. Conduct a Supplemental EIS for the entire STAMP site incorporating new laws and regulations, environmental justice obligations under the CLCPA, and all changes to site plans since 2012, including the introduction of hyperscale data center uses not accounted for in the original GEIS (Section II).

7. Ensure SEQR review incorporates detailed cultural and environmental justice analysis of impacts on the Tonawanda Seneca Nation, with input from the Nation, NYSDEC, and the State Historic Preservation Office. The Nation's downstream hydrological position is acknowledged in the applicant's own Exhibit L. No consultation is documented in the record. This is a legal requirement under Section 106 of the National Historic Preservation Act (54 U.S.C. § 306108), Executive Order 13175, and the 1794 Canandaigua Treaty (7 Stat. 44), and a prerequisite for SEQR adequacy under 6 NYCRR § 617.7 (Section III).

8. Hold a public hearing after all studies and application materials are finalized and made publicly available, with adequate notice and comment period, so that the public can evaluate the actual proposed project rather than the inconsistent versions currently in the record (Section I, II, and III).

9. **Require public disclosure of the identity of the ultimate tenant and operator** before any vote on financial incentives or project approvals. The University of Michigan study documents that data center operators routinely withhold information about their track records, preventing communities from assessing corporate citizenship, enforcement history, and the likelihood of delivering on promised benefits. Multiple speakers at the March 19, 2026 public hearing raised this concern on the record. General Municipal Law Article 18-A public hearings are premised on informed public participation. That premise cannot be satisfied when the entity that will operate the facility, and whose conduct will determine whether noise, emissions, water use, and job creation commitments are honored, remains undisclosed (Section IV).

10. Require enforceable clawback provisions tied to specific, measurable job creation, local hiring, and investment benchmarks before any incentive package is finalized. The University of Michigan study documents that in every comparable case examined, states have lacked sufficient oversight and enforcement mechanisms to ensure tech companies deliver on promised economic benefits. The study specifically notes that the cost per job at this site, specifically — approximately $838,000 per position based on the minimum incentive package — far exceeds reasonable benchmarks for economic development incentives. Without binding clawback provisions with real financial consequences, this board has no mechanism to recover public investment if those benchmarks are not met. The Plug Power experience at STAMP — referenced by multiple speakers at the March 19 hearing, where a prior tenant abandoned its PILOT commitments — demonstrates that this is not a theoretical concern but a documented pattern at this specific site (Section IV).

The documentary basis for each of these requests is detailed in Sections I through IV below.

Section I. The SEQR EAF contains material omissions and internal contradictions
The EAF is the legal foundation of the environmental review. The following gaps are drawn directly from the applicant's own submissions.

Generator count is inconsistent across filings. The SEQR EAF (Section D.2.f) lists twelve total generators: "five [5] for the North Campus and seven [7] for the South Campus". Exhibit N confirms twelve generators rated at 3,621 HP each, totaling 43,452 aggregate horsepower. However, the revised acoustic modeling memo (dated March 10, 2025, within Exhibit O) models only six generators: four north, two south (Table 1 and Design Changes narrative, p. 2 of 7). The revised memo states explicitly that this reduction was "based on email correspondence on February 23rd, 2026." No amended permit application, no updated EAF, and no public notice accompanied this change.

The generator count discrepancy raises a question of which configuration is real, binding, and enforceable. The air permit application (Exhibit N) and the SEQR EAF (Section D.2.f) both authorize and disclose 12 generators. The acoustic modeling (Exhibit O, revised memo, March 10, 2025) was prepared for 6 generators following a private email exchange on February 23, 2026. Nothing in the record makes the 6-generator configuration permanent or enforceable. The applicant retains the right under its air permit to install and operate all 12.

This matters for three reasons. First, the original 12-generator configuration required 30-foot sound barriers on the southern campus to achieve acoustic compliance; a fact confirmed by the revised memo's notation that barriers "are likely to be able to reduce down from 30 feet to 20 feet" (Exhibit O, p. 2 of 7) only after the generator count was reduced. The public was never informed that the full build-out requires taller barriers than what is currently depicted in the site plans. Second, if this project is approved on the basis of 6-generator acoustic modeling but built and operated under a 12-generator air permit, the acoustic compliance submitted to this board is meaningless. Third, the facility's entire air quality permitting strategy depends on classifying these generators as emergency backup sources under 6 NYCRR 201-3.2(c)(6) and NSPS Subpart IIII — a classification that carries significantly lighter regulatory requirements than continuous or primary generation sources. The 500-hour annual permitted maximum disclosed in Exhibit N sits at the outer limit of what emergency classification supports under federal regulations. If actual operating hours approach that permitted maximum (which the fuel consumption math in Exhibit N suggests is possible) the assumption that justifies treating these generators as minor emission sources, rather than subjecting them to stricter permitting, deserves independent verification. The record must establish a single, consistent, enforceable generator configuration before any determination of significance or vote on financial incentives can proceed.

Chiller count is inconsistent across filings. The revised acoustic memo (Exhibit O, Technical Memorandum, March 10, 2025, Design Changes, p. 1 of 7) also reduces the number of rooftop chillers from 66 to 60 per building — from 198 total to 180 total — based on the same February 23, 2026 email correspondence. This reduction is reflected only in the acoustic modeling. No other technical exhibit was updated. Exhibit K (Backup Power), Exhibit L (Geotechnical), Exhibit N (Air Emissions), and the SEQR EAF contain no reference to this change and were prepared in the context of a larger facility. The reduction of 18 chillers has direct implications for water consumption, heat rejection capacity, electrical load, and cooling system emissions that none of the other technical exhibits address in their revised form.

Taken together, the simultaneous reduction of both generators and chillers — reflected exclusively in the acoustic modeling and nowhere else in the application — establishes a pattern rather than an isolated inconsistency. The acoustic compliance showing was selectively updated while the underlying permit applications and environmental assessments were not. This board is being asked to evaluate financial incentives and environmental adequacy for a project that is described differently across its own technical submissions, with no enforceable mechanism to hold the applicant to the smaller configuration that appears only in the acoustic modeling. This is not a drafting oversight. It is a structural deficiency in the application that the record cannot support resolving in the applicant's favor.

The SPCC plan, an EPA-mandated document, has not been submitted. Exhibit S (SEQR EAF) discloses that 114,000 gallons of diesel fuel will be stored on site annually. Exhibit K confirms 9,500-gallon belly tanks, one per generator. A Spill Prevention, Control and Countermeasure (SPCC) plan is required under 40 CFR Part 112 for facilities storing this volume. Exhibit K states only that a plan "will be developed." Approving financial incentives for a facility storing 114,000 gallons of diesel without a completed, submitted SPCC plan is a procedural deficiency.

No groundwater drawdown modeling has been provided. Exhibit L (Geotechnical) states that dewatering will not significantly impact neighboring private wells or the Tonawanda Seneca Nation's water supply — but provides zero quantitative support: no peak gallons per minute, no drawdown radius calculations, no annual acre-feet projections, and no hydraulic conductivity modeling. The EAF confirms groundwater is 10–15 feet below grade and that the site

overlies clay and dolomite. Residents with private wells and the Nation, whose territory lies downstream, cannot assess this claim without actual data.

The acoustic analysis is insufficient. The current report relies exclusively on A-weighted measurements, a methodology the applicant's own report acknowledges is invalid for low-frequency noise sources. Exhibit O states plainly: "if the noise is unusually high at low frequencies or contains prominent low-frequency tones, the A-weighting may not give a valid measure." The exhibit then claims the equipment does not produce such tones, but provides no dBC measurements, no octave-band analysis, and no infrasound assessment to support that claim. This is not a minor methodological gap. It is the precise measurement gap that the peer-reviewed scientific literature has identified as a critical deficiency in industrial noise assessments.

Research published in the *Journal of Exposure Science & Environmental Epidemiology* (Blair et al. (2018), studied continuous audible and low-frequency noise from a facility type directly analogous to the proposed data center with respect to continuous 24/7 operation, diesel generators, compressors, and large mechanical equipment. The study found that while A-weighted measurements at some locations appeared to fall within acceptable ranges, C-weighted measurements "often exceeded the noise of 60 dBC recommended to minimize impacts such as nausea and headaches" (p. 543). Based on the findings, the researchers recommend that noise be kept below 55 dBC (p.545). This study demonstrates that A-weighting alone is insufficient to characterize the health impact of facilities with continuous 24/7 mechanical operations.

The proposed STREAM US Data Centers will operate 198 rooftop chillers and up to 12 diesel generators, 24 hours a day, 7 days a week, 365 days a year, at distances as close as 450 feet from the nearest residence and adjacent to the Tonawanda Seneca Nation's Big Woods. The nearest residential receptor (R7) is predicted at 43 dBA nighttime under constant mechanical operation — within 2 dBA of the 45 dBA nighttime limit — based solely on A-weighted modeling. No one has measured or modeled what the dBC levels will be at that same receptor, or at the Nation's boundary. The Blair et al. study documents that at comparable industrial facilities, dBC levels can exceed dBA levels by 15 to 20 decibels or more. A facility that appears compliant in dBA may simultaneously be producing low-frequency noise well above health-protective thresholds.

The absence of dBC measurement is not a technicality. It means the acoustic analysis submitted by the applicant is scientifically incomplete for a 24/7 continuous-operation industrial facility of this scale, and that the public, the lead agency, and the Tonawanda Seneca Nation have been given no meaningful basis to evaluate low-frequency noise impacts on human health, wildlife, or the ecological communities of the surrounding refuge. This gap must be addressed through independent dBC and octave-band measurement before any determination of significance is made under SEQR.

GapFuel quantity figures are internally contradictory. Exhibit K states each 9,500-gallon tank will require fueling "no more than once per year." Exhibit N discloses a maximum fuel consumption rate of 172.9 gallons per hour per generator at full load. At the permitted maximum of 500 hours per year, each generator would consume approximately 86,450 gallons — requiring refueling roughly nine times per year, not once. The "once per year" claim in Exhibit K is accurate only if generators operate fewer than 55 hours annually. This contradiction must be resolved in the record.

GapTier 2 engines with aftertreatment are not the same as Tier 4 engines. Exhibit N discloses that the generators are Tier 2 certified engines *equipped* with Miratech aftertreatment controls intended to meet Tier 4 standards. The entire air quality compliance case rests on vendor-guaranteed emission factors from this control technology. No independent stack testing has been performed or committed to. The EAF does not disclose this distinction.

Section II. The SEQR review relies on a 2012 GEIS that did not contemplate hyperscale data centers
The environmental review supporting this application was designed for a different project, conducted under different laws than are now required. The applicant's own stormwater plans have already been found deficient by the state agency responsible for reviewing them.

The EAF states: "The entire STAMP complex was subject to previous SEQRA review per the DGEIS dated April 14, 2011, FGEIS accepted by GCEDC on January 19, 2012" (Part 1, A). The proposed facility is a 2.2 million square foot hyperscale data center consuming 500 megawatts of power — a facility type that did not exist at the scale being proposed in 2012. The 2012 GEIS contemplated advanced manufacturing. It did not study continuous 24/7 diesel generator emissions, the acoustic profile of 198 rooftop chillers, or the water and wastewater demands of this class of facility. Relying on a 14-year-old GEIS for a categorically different project type does not satisfy SEQR's requirement for a hard look at the impacts of the actual proposed action.

NYSDEC has already identified more than 20 significant deficiencies in the project's stormwater plans (as documented in independent expert testimony submitted at the March 19, 2026 public hearing by Dr. Madeline Nyblade, SUNY-ESF). Drainage maps reportedly do not match actual ground conditions, and post-construction stormwater practices are modeled to fail under major storm events. These findings alone warrant a supplemental environmental impact statement.

Taken together these two points support a single conclusion: this board cannot make a legally defensible determination that this project will have no significant adverse environmental impact based on a 2012 GEIS that never studied this type of facility and a stormwater plan that NYSDEC has already found to be deficient.

The appropriate response under SEQR is a positive declaration — a formal finding that the project may result in significant adverse environmental impacts — which triggers the requirement for a full Environmental Impact Statement (EIS), specific to this project. That EIS would need to address the actual impacts of a hyperscale data center under current law, including New York's Climate Leadership and Community Protection Act (CLCPA, enacted 2019, NY ECL § 75-0101), which did not exist when the 2012 GEIS was prepared. The CLCPA requires state agencies to avoid disproportionately burdening disadvantaged communities when issuing permits and approvals. The Tonawanda Seneca Nation's territory is a designated disadvantaged community under the CLCPA's Climate Justice Working Group analysis, and the project's acknowledged impacts — noise, air emissions, stormwater, and groundwater — all reach that territory. None of this was evaluated in 2012 because the law requiring it didn't exist yet.

Section III. Federal tribal consultation was not conducted
The Tonawanda Seneca Nation is a federally recognized sovereign nation whose territory borders the project site and lies downstream of it hydrologically. The applicant's own Geotechnical Technical Summary (Exhibit L) explicitly names the Nation as a downstream receptor, stating that dewatering is "not anticipated to have a significant adverse impact on the groundwater table, private water wells, or the downstream ecosystems of the Tonawanda Seneca Nation" (p.2), while providing no quantitative modeling, peak GPM figures, drawdown radius calculations, or acre-feet projections to support that conclusion.

The Nation's downstream position is therefore acknowledged in STREAM's own filings, yet no consultation is documented in the record. Federal law requires meaningful government-to-government consultation with Indian tribes before actions that may affect their lands, cultural resources, or treaty rights. This obligation arises under Section 106 of the National Historic Preservation Act (54 U.S.C. § 306108; 36 CFR Part 800), which is triggered here by the site's acknowledged archaeological sensitivity (EAF Section E.3.f) and by NYSDEC permit applications that

constitute a federal nexus. It is further grounded in Executive Order 13175 and, most fundamentally, in the 1794 Canandaigua Treaty (7 Stat. 44), recognizes Seneca lands and affirms their free use and enjoyment. Exhibit S, Section E.4 acknowledges that the project will produce "noise and air impacts" within a ½ mile of a disadvantaged community.

For a project located within such close proximity to the Seneca Nation, SEQR requires the lead agency to take a hard look at potential impacts on tribal culture and environmental resources; in practice, consultation with the Nation is often necessary to support a legally adequate determination of significance under 6 NYCRR § 617.7.

Section IV. Independent research documents the community impacts of data center tax incentives
The technical deficiencies identified in Sections I through III do not exist in isolation. They are consistent with a broader pattern documented in peer-reviewed and institutional research on data center development across the United States.

A paper published by the University of Michigan Gerald R. Ford School of Science, Technology, and Public Policy in partnership with the Michigan Environmental Justice Coalition, conducted a comprehensive analysis of data center impacts on local communities across multiple states. Their findings are directly relevant to this application and in one instance address this exact project (p. 7-8), claiming that the proposed subsidies — sought at a minimum of $167 million for 200 jobs, or $838,000 per job — make the "per-job cost difficult to justify" and unlikely to "provide meaningful economic benefits to the local community" (p.8).

More broadly, the study documents that in every state where data center tax breaks have been enacted, residential electricity rates have increased as utilities pass infrastructure upgrade costs onto consumers. In Michigan, residential rates rose 25% following the construction of the Switch data center and are now 17% above the national average. The study further documents that data centers consistently fail to deliver the high-paying local jobs promised during the approval process, instead generating primarily short-term construction positions and a small number of low-wage permanent roles filled by contractors rather than local full-time employees.

The study concludes that for states without existing data center tax breaks (and New York's current position) the most straightforward policy recommendation is simply not to enact them, noting that these incentives "often fail to deliver promised economic benefits and impose significant costs on state and local budgets." (p.16).

This board is being asked to award what multiple speakers at the March 19, 2026 public hearing described as one of the largest data center subsidy packages in United States history. The research literature, including a study that addresses this specific project and site by name, provides no support for the proposition that this investment will deliver the economic benefits claimed.

Section V. Conclusion
These are not speculative concerns. They are factual discrepancies and omissions within the applicant's own submitted documents. The public hearing record already contains credentialed scientific testimony identifying more than 20 NYSDEC-flagged stormwater deficiencies, a formal objection from the Tonawanda Seneca Nation citing treaty rights and absence of consultation, and a documented pattern of Freedom of Information Law non-compliance. The technical findings I have attached document specific evidence that the application as submitted is incomplete and internally inconsistent.

GCEDC cannot make an informed determination of significance — and this board cannot responsibly vote on financial incentives — until these discrepancies are resolved on the record.

I respectfully request that these comments be entered into the administrative record in full.

Respectfully submitted,
Lisabeth Tinelli, PhD
Monroe County Resident
April 15, 2026

Introduction

The rapid growth of data centers, with their enormous energy and water demands, necessitates targeted policy interventions to mitigate environmental impacts and protect local communities. To address these issues, states with existing data center tax breaks should adopt sustainable growth policies for data centers, mandating energy audits, strict performance standards, and renewable energy integration, while also requiring transparency in energy usage reporting. "Renewable energy additionality" clauses should ensure data centers contribute to new renewable capacity rather than relying on existing resources. If these measures prove insufficient, states should consider repealing tax breaks to slow unsustainable data center growth. States without tax breaks should avoid such incentives altogether while simultaneously implementing mandatory reporting requirements to hold data centers accountable for their environmental impact. Broader measures should include protecting local tax revenues for schools, regulating utility rate hikes to prevent cost-shifting to consumers, and aligning data center energy demands with state climate goals to avoid prolonging reliance on fossil fuels.

Key Findings

Increased Utility Rates: Data centers increase local electric utility rates by driving up overall energy demand, which can strain grid capacity and force utilities to invest in costly infrastructure upgrades. These costs are passed on to residents through higher rates. Data centers have also secured long-term power agreements, which reduce the available supply and push prices up for other consumers.

High Resource Consumption: A single data center can consume up to 2 megawatt hours of power—equivalent to the power used by 2,000 homes—and millions of gallons of water annually for cooling, straining local resources and infrastructure.

Ineffective Tax Incentives: Tax breaks for data centers do not deliver the promised economic benefits, such as high-paying jobs, and they reduce local tax revenues, while shifting financial burdens onto communities and schools.

Climate and Energy Challenges: Data centers' massive energy demands are prolonging the operation of fossil fuel plants and undermining state renewable energy goals, as seen in states like Michigan, Virginia, and Nebraska.

Resource Efficiency Trade-Off: While advanced cooling methods like liquid immersion and direct-to-chip cooling offer energy efficiency improvements, current technologies force a trade-off between energy and water efficiency, limiting sustainable solutions.

Policy Solutions: To mitigate data centers' environmental impacts and align their growth with sustainability goals, policymakers should adopt model laws like the German Energy Efficiency Act, add requirements for new renewable energy, and enforce transparency through mandatory reporting.

Background: Data Centers and the Environment

What is a data center?

A data center is a specialized facility designed to house and manage an organization's IT infrastructure, including servers, storage systems, networking equipment, and other hardware essential for processing, storing, and distributing vast amounts of data. These facilities serve as the backbone of modern digital services, enabling everything from cloud computing and online transactions to streaming platforms and artificial intelligence (AI) applications. Data center designs incorporate advanced cooling systems, backup power, and in-house cybersecurity measures to ensure efficiency, reliability, and security. As data centers continue to grow in scale and complexity, their energy use and environmental footprint are also expanding.

Why are data centers growing so rapidly?

Data centers are growing rapidly due to the exponential increase in data generation and consumption occurring across industries. The proliferation of cloud computing, internet of things (IoT) devices, artificial intelligence, and big data analytics has created an insatiable demand for storage, processing power, and connectivity. AI has largely driven increases in data center electricity demands as advanced machine learning models require massive computational power for training and inference. One estimate suggests that a prompt on ChatGPT requires 10 times more energy than a traditional Google search.[1] Businesses and consumers rely on seamless and instantaneous access to online services, streaming platforms, and real-time applications, necessitating server infrastructure to support these needs. Additionally, the shift to remote work and hybrid models during the COVID-19 pandemic further accelerated the reliance on cloud-based solutions, pushing data center expansion.

Why do data centers consume water for cooling?

For higher-density data centers, liquid cooling is required to maintain performance requirements. Data centers generate heat primarily due to the electrical energy consumed by servers, storage systems, and networking equipment. When electricity powers these components, a significant portion is converted into heat due to resistance in circuits, semiconductor switching losses, and other inefficiencies. High-performance computing tasks, such as AI training, cloud computing, and large-scale data processing, further intensify heat generation because they demand continuous, heavy workloads.

If this heat is not removed, rising temperatures lead to hardware malfunctions, reduced efficiency, and even permanent damage. Water cooling is often used because it absorbs heat more effectively than air thanks to water's high specific heat capacity (ability to store thermal energy) and thermal conductivity (ability to transfer heat). Twenty-two percent of data

center facilities use water-based cooling systems to absorb and dissipate heat more efficiently than air alone.[2] Systems like chilled water loops, liquid immersion cooling, or evaporative cooling circulate water to capture and carry away heat and maintain safe operating temperatures while improving energy efficiency compared to air-based methods.

How much water and electricity do data centers use?

Data centers are rapidly growing consumers of electricity and water, driven by their energy-intensive operations and cooling requirements. On average, a single data center can consume up to 2 megawatt hours (MWh) of electricity, which is roughly the equivalent power consumption of a small town. Data centers consumed more than 4% of U.S.

Photo credit: creativenature.nl - stock.adobe.com

electricity in 2023, with estimates suggesting that this consumption could rise to 12% by 2028.[3] This massive electricity demand is matched by equally staggering water consumption, as cooling these power-hungry facilities requires vast amounts of water—some individual data centers use hundreds of millions of gallons annually, dwarfing the usage of entire communities the data centers are within. Most facilities use over 10 million gallons (38 million liters) of water per year.[4] Google's Council Bluffs data center in Iowa uses around 980 million gallons (3709 million liters) of water per year, which is equivalent to the annual water usage of over 4 million homes.[5]

How does data center cooling work?

Data center cooling relies on six main technologies to manage heat dissipation and maintain optimal performance.

1. Water-cooled systems are water-intensive but energy-efficient.[6] Chilled water cooling systems use a refrigeration cycle to cool air via chilled coils.
2. Air-cooled systems rely on fans and compressors, consuming more electricity but less water, while Direct Expansion (DX) cooling uses refrigerant to absorb heat directly from the air, making it suitable for smaller data centers.
3. Computer Room Air Handlers (CRAHs) circulate chilled water and air in separate loops, offering efficient temperature and humidity control for larger spaces.
4. Emerging technologies like liquid immersion cooling and direct-to-chip liquid cooling use dielectric fluids to cool components directly, enabling higher power densities and energy savings but requiring specialized equipment.

While these cooling technologies each offer distinct trade-offs between water and energy use, the fundamental challenge remains. Data centers must prioritize either water efficiency or energy efficiency, as existing systems cannot yet optimize both simultaneously. Data center cooling can be optimized for either energy efficiency or water efficiency, but with current cooling technology, achieving both is not possible.

The impossibility of an environmentally friendly data center

Data centers cannot fully operate on renewable energy alone. Renewable energy sources like solar and wind are inconsistent and cannot meet the uptime (time during which a machine, especially a computer, is in operation) requirements of data centers. Tier 1 data centers require 99.671% uptime while Tier 4s demand 99.995%. These factors make it impossible for data centers to depend solely on renewables without compromising reliability.

As demand for cloud computing and AI-driven technologies accelerates, data centers are being constructed at a rapid pace, often in areas where existing power infrastructure is insufficient to meet their enormous energy needs. **To ease concerns about environmental impact, data center operators frequently pledge that their facilities will eventually run on clean energy, including next-generation nuclear sources such as small modular reactors (SMRs). However, these SMRs remain largely theoretical, with no commercially viable models yet in operation.**[7] In the interim, companies claim they will rely on fossil fuels as a temporary "bridge" until greener solutions become available. Yet in practice, this transition is often delayed or abandoned altogether, resulting in the direct commissioning of new fossil fuel power plants to keep these facilities online.

This gap between promise and reality underscores the fundamental contradiction in labeling data centers as "environmentally friendly." Battery storage is essential for balancing the intermittent nature of renewable energy generation, but batteries rapidly degrade and are reliant on rare minerals like lithium, nickel, cobalt, manganese, lead, and copper. These minerals are already in short supply due to high demand from the electric vehicle industry. Data centers will also always have an environmental footprint through material resource consumption, water usage, and electricity demands. This makes it unfeasible for them to be completely environmentally friendly.

The Effects on Local Communities

Data centers do not bring in high-paying tech jobs

Data centers do not bring high-paying tech jobs to local communities because they operate as infrastructure projects rather than traditional job-creating businesses. Although the construction of data centers can create many jobs, those are short-lived. Once data centers are built, they require relatively few employees since the facilities primarily house computers and servers.[8] The jobs that data centers do create locally are typically low-wage, term-limited, non-technical positions such as security, maintenance, and janitorial work. These roles are often filled by contractors rather than full-time employees, meaning they lack union protections, benefits, and job security. As a result, these positions tend to be short-term and do not contribute to sustained economic growth or long-term career opportunities for local residents.

Subsidies intended to encourage job creation result in corporate benefits without local hiring. For example, tax breaks for data centers in Washington State were intended to create jobs in rural areas but primarily benefited large corporations like Microsoft.[9] Since the inception of the incentives, more than $300 million in tax revenue has been forgone—money that would otherwise have supported public services such as education, emergency services, and infrastructure. In exchange, the data centers have created few jobs and have required limited staffing for operations. In Quincy, a small town that hosts several large data centers, the local fire department is so underfunded that it struggles to retain personnel and replace outdated equipment—even as Microsoft and other tech giants operate multimillion-dollar facilities nearby. In some cases, the cost to taxpayers for each job created can exceed $1 million. Furthermore, the state has little oversight or enforcement mechanisms to ensure that the tech companies deliver on promised benefits. Despite initial legislative goals to boost local employment and economic vitality, the reality is that taxpayers are heavily subsidizing wealthy corporations with minimal transparency or accountability regarding the actual economic impact.

Photo credit: timofeev - stock.adobe.com

Data center tax breaks only benefit corporations

Data center companies locate sites based on electricity prices, land availability, and climate conditions. Although tax breaks are often justified as a way for communities to attract data centers, these policies do not affect data center location decisions. As an executive responsible for Microsoft's North American data centers stated in 2024, "I can't think of a site selection or placement decision that was decided on a set of tax incentives."[10]

A new data center in Genesee County, Alabama, could reduce revenues to schools and the local government by $1.7 million each year.[11] Developers are seeking a

minimum $167 million in tax breaks for the creation of 200 jobs, or $838,000 per job. These figures far exceed reasonable benchmarks for economic development incentives, making it unlikely that taxpayers will ever see a return on investment. These subsidies would come on top of approximately $100 million in state funding already spent on preparing the STAMP (Science and Technology Advanced Manufacturing Park) site, making the per-job cost difficult to justify. The high subsidies for STAMP would serve only to boost corporate profits rather than provide meaningful economic benefits to the local community.

Reduced tax revenue for independent school districts

In the case of Switch's data center in Michigan, the company sought exemptions from property taxes that funded school districts. This move directly reduced the revenue streams for Caledonia Community Schools and Kent Intermediate School District, resulting in a prolonged legal dispute.[12]

In Michigan, tax breaks for data centers exempt them from paying personal property taxes, including on machinery and computers, some of the most valuable assets in their operations.[13] While they may still pay real property taxes on land and buildings, the overall tax contribution to schools is significantly diminished. This loss of revenue means less funding for educational programs, teacher salaries, and facility improvements, directly impacting the quality of education for students. These tax incentives have shifted the financial burden onto residents and other businesses, who must make up for the lost revenue through higher taxes and reduced public services. Michigan lawmakers initially considered legislation that would have required school districts to reimburse the company for taxes already paid, further straining school finances.

Photo credit: Monkey Business - stock.adobe.com

Higher energy rates for consumers

When data centers are built, they raise utility rates for nearby communities. **As demand surges, utility companies often pass the costs of infrastructure upgrades and increased energy procurement onto residents and small businesses through higher rates.**[14]

Many communities, especially in rural or suburban areas, do not realize the connection until their monthly bills spike. Companies and legislatures also withhold information about the electricity and water use of data centers, preventing consumers from realizing that increased utility costs are often associated with the arrival of energy-intensive facilities. By keeping usage data confidential or vaguely reported, corporations and policymakers avoid public scrutiny, even as these facilities strain local resources. Without clear disclosures, residents remain unaware of how much water is diverted for cooling systems or how much electricity is consumed—information that could help communities

push for fairer cost distribution or sustainable practices.

This lack of accountability allows data center operators to expand rapidly while shifting the financial and environmental burdens onto utility customers. As a result, many residents must pay higher bills without understanding the cause, leaving them unable to advocate for better regulations or compensation.[15] The financial strain caused by data centers most severely impacts lower-income households, whose utility bills represent a disproportionate share of their income, exacerbating economic inequality in the region.

Photo credit: agnormark - stock.adobe.com

While communities face higher bills, data centers frequently negotiate lower rates through bulk Power Purchasing Agreements (PPAs) with investor-owned utility companies.[16] These agreements allow data centers to operate at reduced costs despite their massive energy consumption, further shifting the financial burden onto local households and businesses. In August 2024, Meta signed two long-term PPAs with German power producer RWE for a combined 374 megawatt production in Illinois and Louisiana.[17] Despite solar PPA prices holding steady, energy prices for residential consumers have increased by 20.7% in Clark County, Illinois, and 39.0% in Laffite, Louisiana.[18] Data centers and utility companies frequently collaborate to lobby state regulators for rate increases, exacerbating the disparity. In Michigan, DTE and Switch have spent over $2 million lobbying the state house, senate, and Public Service Commission to raise electric rates; residential electricity rates have increased by 25% since the construction of the Switch data center in 2017 and are now 17% higher than the national average.[19] This figure has yet to include the additional $217.4 million rate hike approved by the Michigan Public Service Commission this year.[20] This dynamic leaves communities bearing the brunt of higher utility prices without reaping the economic benefits promised by data center development.

Data Centers Keep Fossil Fuel Plants Open

The rapidly growing energy demands of data centers have forced states to delay the retirement of coal and gas plants and even consider building new fossil fuel facilities.

Michigan

Data centers undermine Michigan's climate plan by increasing electricity demand to a level that justifies keeping fossil fuel plants online. The state's climate law includes an "offramp" provision, allowing fossil fuel generation to continue if renewable energy capacity is insufficient.[21] As artificial intelligence and cloud computing drive higher energy consumption, utilities like Consumers Energy have warned that meeting renewable portfolio standards may become more challenging. Similar data centers have derailed climate goals in other states.[22]

Photo credit: Parilov - stock.adobe.com

Virginia

Data centers have prolonged the use of coal and led to new natural gas proposals in Virginia.[23] PJM Interconnection announced that Virginia's coal power plants will continue operating to meet electricity requirements of data centers while waiting for renewable energy infrastructure to catch up. This situation is especially acute in Virginia, which hosts about half of all U.S. data centers and faces projected power demand increases of 85% over the next 15 years.[24] While renewable energy projects, like the Sumitomo Corp's 1.5 gigawatt solar and battery initiative are being developed, the immediate power requirements are so substantial that coal plants in West Virginia and Maryland are being kept operational well beyond their planned retirement dates.[25] PJM Interconnection has proposed a $5.9 billion project to build new transmission lines that would deliver electricity across multiple states to Virginia.[26] The transmission network would transport power from several West Virginia coal plants that are scheduled to shut down.

Nebraska

The 644-MW North Omaha Station coal plant, originally scheduled to close in 2023, will now remain active until at least 2026 due to increased power needs from nearby data centers.[27] Meta's facility alone consumes nearly as much power as the entire North Omaha station produces, while Google's data center in Papillon is an even larger power consumer. The problem is compounded by local resistance to renewable energy projects and regulatory hurdles slowing the transition to natural gas. Meanwhile, state officials have actively courted these tech companies with special electricity rates.

Utah

Lawmakers in Utah have cited the power demands of data centers as justification for extending the life of the Intermountain Power Project coal plant.[28] This trend is part of a broader strategy where tech companies are

repurposing coal sites to power data centers, attracted by their existing infrastructure including power lines, water access, and workforce availability.

Georgia

Georgia Power, facing power shortages by 2025 due to increasing data center development, has arranged to purchase 750 MW of electricity from Mississippi Power's Plant Daniel, which was originally scheduled to retire its coal units in 2027.[29] This arrangement will extend the life of inefficient 50-year-old coal-burning facilities for an additional 5–10 years.

Washington

Since the state's hydropower capacity is reaching its limits, counties are increasingly forced to rely on energy from the open market, where utilities buy electricity from a mix of carbon-emitting energy sources to meet the growing demand. In Grant County, Washington, data centers now account for nearly 40% of the county's total electricity demand, equivalent to the power used by 190,000 households.[30] To meet this demand, utilities have been forced to rely on "unspecified" power sources, which include fossil fuels like natural gas, purchased from the open market. This shift has reduced the share of renewable energy in the state's power mix, despite Washington's ambitious clean energy goals. The finite capacity of hydropower, combined with the rapid growth of data centers, has created a situation where utilities must either risk blackouts or continue to depend on fossil fuels to meet energy needs.

Indiana

Indiana's House Bill 1007 will keep coal and gas plants running while subsidizing small nuclear reactors to guarantee the power supply for AI data centers.[31] The bill creates financial incentives for SMR (Small Modular Reactors) development through tax credits funded by energy generation cost savings brought about by keeping fossil fuel plants online. Additional provisions will keep fossil fuel plants open for even longer, even when they are economically or environmentally unviable, by requiring regulatory reviews before any major retirements. If regulators determine that retiring a plant would threaten grid reliability, utilities will be barred from shutting it down and allowed to pass the full cost of continued operation onto consumers through rate hikes. At the same time, the bill encourages utilities to fast-track new generation projects to meet surging demand from data centers. These investments will further drive up electricity prices as the costs of construction, subsidies, and guaranteed returns for utilities are recovered from ratepayers. By prioritizing uninterrupted power for large corporate consumers over a managed transition to cleaner energy, the bill locks Indiana into higher electric rates and prolonged dependence on fossil fuels, leaving households and small businesses to bear the financial burden.

Michigan recently passed a data center tax exemption bill; what is in it?

Public Act 207 of 2024 grants tax exemptions for data center equipment purchases for brownfield sites (sites that are previously developed properties that are abandoned, underutilized, or contaminated due to past industrial or commercial activities) until 2050 or 2065.[32] These exemptions apply to both the construction and operational phases of data centers. To qualify, facilities must meet certain criteria, including capital investment of at least $250 million and creating at least 30 jobs that pay 150% of the region's median wage.

Photo credit: New Africa - stock.adobe.com

The tax breaks will reduce state revenue, raise utility prices for local communities, and create minimal employment benefits for a niche industry with limited job creation potential. AI data centers typically have lifespans of around 15-20 years.[33] A tax exemption for qualifying data centers until 2050 is expected to completely exempt these facilities from all construction and operating taxes throughout their life cycle.

The increased demand for resources by data centers strains local grids, which leads utilities to invest in infrastructure upgrades while passing the costs to consumers through higher rates. Some data centers negotiate special rates or exemptions, creating a situation where other customers, including households, bear the cost of maintaining the grid's stability.

In Grand Rapids, a data center is already contributing to higher utility prices for residents. Since the construction of the Switch data center in 2015, the city has announced its 10th consecutive year of water supply rate increases for households, averaging an increase of 3.438% annually, a 49% greater increase than the statewide average during the same period.[34] Meanwhile, Switch has secured a 22-site, 200-megawatt, tax-exempt utility deal with Consumers Energy with plans to expand further starting January 2025.[35] The construction of the data center has enabled DigitalBridge, the parent company of Switch, to exploit the favorable regulatory environment while shifting the costs to residential consumers.

Policy Recommendations For States With Existing Tax Breaks

There are currently no state or federal laws that directly restrict or deter the construction of data centers. Over a dozen states have implemented tax break laws specifically designed to incentivize their development. The rapid expansion of data centers has also placed a strain on local utility and grid infrastructure. In all states with data center tax breaks, households who share utility and grid infrastructures with data centers have been pushed toward relying more on non-renewable energy sources and have experienced higher electricity rates.[36]

States with existing tax breaks for data centers should consider adopting elements from the model laws described below. The strongest of these laws is the German Energy Efficiency Act.

Photo credit: Thongsuk - stock.adobe.com

California SB 57: Data center tariffs

California's Ratepayer and Technological Innovation Protection Act would impose specific requirements on data centers to align with California's climate and grid reliability goals. By July 1, 2026, data centers would need to operate under a special tariff system designed to ensure they do not shift costs to other ratepayers. Data centers would also be required to enter into 12-year binding contracts to cover transmission and distribution costs, with provisions for exit fees and insurance bonds to mitigate financial risks if they cease operations or underutilize energy. They would need to prepay for necessary grid infrastructure upgrades in exchange for expedited interconnection, with potential reimbursement over time. By January 1, 2030, 100% of electricity delivered to data centers would need to come from zero-carbon resources, without increasing emissions elsewhere in the western grid. The bill would define data centers as large-scale energy consumers which house servers and related equipment for data processing, storage, and distribution.[37]

California SB 222: Data center energy usage reporting and modeling

California's SB 222 would mandate that data centers estimate and report the total energy used for developing "covered models" (AI models requiring significant computing power) to developers upon contract termination or request. Developers would be required to publish this energy usage data on their websites before commercial use or third-party availability. The bill would also require data center operators to annually report energy consumption and performance data to the California Energy Commission, including metrics on total energy use, efficiency, renewable energy usage, and energy used for AI development. The commission would set energy efficiency standards for data centers, prioritizing cost-effectiveness, technological feasibility, and alignment with California's greenhouse gas reduction targets, while requiring new or significantly altered data centers to incorporate load-management and demand response capabilities.[38]

Virginia SB1234: Prohibiting data center costs from being passed on to customers

Virginia's SB1234 would establish a provision to regulate how costs associated with the construction or extension of electric distribution infrastructure for data centers are handled. The bill stipulates that no costs related to building or expanding such infrastructure can be allocated to or recovered from any other utility customer. This includes expenses for land acquisition tied to the infrastructure. This means that the financial responsibility for these costs must fall entirely on the data center or the entity benefiting from the infrastructure and cannot be passed on to other customers through their utility rates or charges. The provision aims to ensure that other customers are not burdened with the costs of infrastructure projects that primarily serve data centers.[39]

Virginia HB2578: Retail sales and use tax for data centers

HB 2578 would expand eligibility requirements for their existing sales and use tax exemption by mandating that data centers purchase a certain percentage of their annual electric load from clean energy resources and demonstrate sufficient investment in energy efficiency measures that provide system-wide benefits. It would also require that backup generators meet specific emissions standards. It would require the Commission on Electric Utility Regulation to examine the cost and feasibility of data centers using non-diesel-fired, onsite backup and primary generation and report their findings to the General Assembly. The Department of Energy would be tasked with identifying opportunities for the beneficial use of data center waste heat, creating an interactive map of data centers and potential heat users, developing a strategic plan to accelerate heat reuse, designating an employee to lead these efforts, and convening a stakeholder group to prepare a report for the General Assembly.[40]

Photo credit: jeson - stock.adobe.com

The German Energy Efficiency Act

The German Energy Efficiency Act (Energieeffizienzgesetz, or EEffG) establishes a sustainable growth model for data centers. It mandates energy audits, performance standards, renewable energy use, and public reporting to drive sustainability and efficiency while supporting national energy transition goals. One major requirement is that large data centers must conduct regular energy audits to identify opportunities for reducing energy consumption and improving efficiency. The Act also mandates that data centers meet specific energy performance standards, encouraging the adoption of advanced cooling technologies, server virtualization, and other energy-saving measures. Operators of data centers are incentivized to use renewable energy sources, either through on-site generation or procurement from certified green energy providers. The Act further promotes transparency by requiring data centers to publicly report their energy usage and efficiency metrics. These provisions ensure that data centers contribute to Germany's broader energy transition

goals by minimizing their environmental impact while maintaining operational efficiency.[41]

Recommendation: Adopt the German Energy Efficiency Act model

States with existing data center tax breaks should adopt the German Energy Act model to most effectively deter the rapid expansion of data center construction. The act prioritizes the integration of renewable energy sources and imposes strict efficiency standards on data centers, ensuring that their growth does not disproportionately burden the grid or increase reliance on non-renewable energy. U.S. states that adopt similar provisions would require data centers benefiting from tax incentives to meet high energy efficiency benchmarks, invest in on-site renewable energy systems, and contribute to grid modernization efforts. This would not only mitigate the negative impacts on ratepayers but also ensure that data center growth aligns with broader climate and sustainability goals through renewable energy portfolio requirements.

One Step Further: Require new renewable energy production

To prevent the increased use of fossil fuels resulting from data center construction and operation, a policy should be implemented requiring data centers to produce or procure 100% of their energy from renewable sources. This mandate would ensure that data centers do not contribute to rising demand for non-renewable energy. To address the risk of data centers' monopolizing renewable energy supplies and shifting consumers onto fossil fuel-based grids, the policy should include a "renewable energy additionality" clause. This clause would require data centers to generate new renewable energy capacity (e.g., by building on-site solar farms or funding new wind projects) rather than relying on existing renewable infrastructure. This approach ensures that data centers expand the overall supply of renewable energy rather than competing with consumers for limited resources. The policy should also include provisions for grid modernization and energy storage investments to stabilize renewable energy availability and prevent price spikes that could disproportionately affect consumers. By prioritizing both renewable energy procurement and expansion, this policy would support data center growth while safeguarding consumer access to clean energy.

If all else fails, repeal

If all other measures to manage the environmental and infrastructural impacts of data center growth prove ineffective, states retain the option to repeal tax breaks for future data center construction. Although repealing tax breaks would not encourage data center operators to prioritize sustainability, it would eliminate a policy that benefits companies at the expense of communities.

Policy Recommendation For States Without Data Center Tax Breaks

Do not enact data center tax breaks

For states that have not passed data center tax breaks, the most simple policy recommendation is to avoid implementing such incentives in the first place. Legislators should refrain from passing laws that grant tax breaks to data centers, as these incentives often fail to deliver promised economic benefits and impose significant costs on state and local budgets. Despite claims of job creation, data centers typically generate few permanent positions relative to the scale of public subsidy they receive. The high energy consumption and environmental impact of data centers can strain local infrastructure and undermine climate goals. Redirecting public resources toward initiatives with more substantial and equitable economic returns, such as education, workforce development, or renewable energy, offers a more responsible and effective use of taxpayer dollars.

Abstract

Public concern about oil and gas (O&G) operations in residential areas is substantial. Noise from construction and drilling related to O&G operations may be greater than other phases of O&G operations; yet the impacts of audible and low-frequency noise during these operations are not extensively explored nor the effects on health well understood. This study documents the noise levels at a multi-well O&G well pad during construction and drilling in a residential area in Colorado. A-weighted (dBA) and C-weighted (dBC) noise measurements were collected at four locations during development over a 3-month period. The maximum 1-min equivalent continuous sound levels over a 1-month period were 60.2 dBA and 80.0 dBC. Overall, 41.1% of daytime and 23.6% of nighttime dBA 1-min equivalent continuous noise measurements were found to exceed 50 dBA, and 97.5% of daytime and 98.3% of nighttime measurements were found to exceed 60 dBC. Noise levels exceeding 50 dBA or 60 dBC may cause annoyance and be detrimental to health; thus, these noise levels have the potential to impact health and noise levels and associated health effects warrant further investigation.

Keywords Oil and gas operations · Drilling · Construction · Noise · Low-frequency noise · Sound · Health

Introduction

Oil and gas (O&G) development and operations has increasingly occurred near populated areas and has raised public health concerns [1–4]. Research near O&G sites to date has largely focused on chemical emissions from these sites or the potential risks and health effects in nearby populations [5–11]. While noise from O&G operations has been raised as a potential public health concern for communities near these sites [1, 4, 12, 13], the levels of audible and low-frequency noise during O&G operations in residential areas are not well documented in the peer-reviewed scientific literature.

Noise is generated during all stages of the O&G well development and operation life cycle (i.e., exploration, well development, production, and site decommissioning) and can come from numerous sources such as trucks, heavy equipment, generators, compressors, and gas flaring [1]. For example, in Garfield County, Colorado, audible noise levels at a distance of 1000 ft (304.8 m) were reported to be 69 A-weighted decibels (dBA) during drilling operations [12]. Low-frequency noise is also present during O&G operations [14, 15]. Low-frequency noise is measured using C-weighted decibels (dBC) and can measure audible noise in addition to the perception of pressure [16]. Boyle et al. (2017) found the nighttime C-weighted noise levels to be more than 15 dB greater than A-weighted noise levels for some homes near a compressor station, indicating increased potential exposure to low-frequency noise. Radtke et al. (2017) reported a mean noise level of 80 (SD = 2.1) dBC during hydraulic fracturing with operations running at full capacity without a sound wall. At present, we lack an understanding of the impacts of low-frequency noise levels from O&G operations in urban areas or the effect of incorporating best management practices, which can include noise mitigation by adding sound controls to equipment, constructing a sound wall, and using noise absorbing material [4]. Low-frequency noise and the impacts of mitigation approaches have been evaluated at O&G operations and this previous research has shown that the levels based on testing at isolated areas without outside sound interference and the presence of a sound wall would

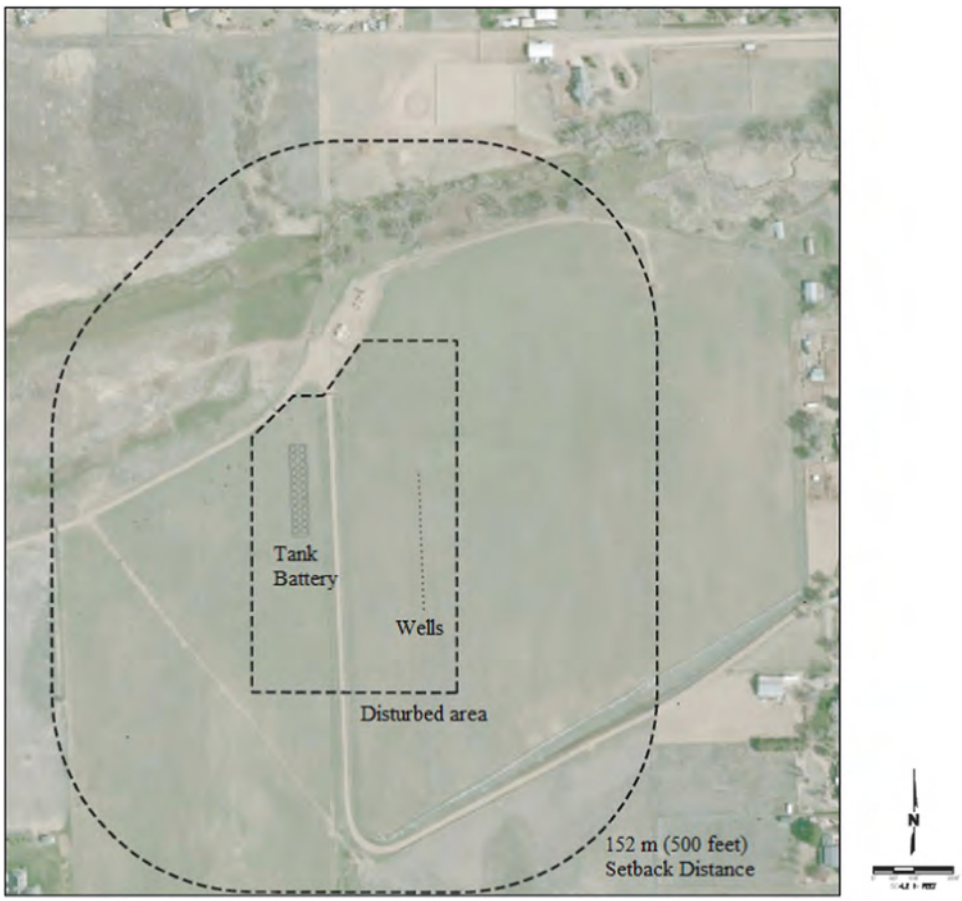

Fig. 1 : Map of location. The map highlights the proposed location of the wells, tank battery, area disturbed from well pad development, and the regulatory setback buffer

be of concern if these operations were near homes [14]. Still, the levels and public health implications of audible and low-frequency noise levels from the various stages occurring during O&G operations are not well understood. Public complaints and health concerns from increased noise are a common issue at many O&G operation sites. For example, between 35 and 55% of survey respondents in the Marcellus Shale region reported noise pollution as a stressor from O&G operations and development [17]. In the State of Colorado, noise was reported to be responsible for 10.4% of the complaints sent by the public to the Colorado Oil and Gas Conservation Commission from November 2001 to June 2013 (COGCC) [18]. More recently, 123 out of 330 (37.3%) complaints received by the COGCC in 2015 were related to noise [19], demonstrating that public concern from the noise related to O&G operations is likely increasing.

In Colorado, the COGCC regulates noise from O&G operations [20]. COGCC Rule 802 states that the maximum permissible noise level is not to exceed 55 dBA during daytime hours (7 am to 7 pm) and 50 dBA during nighttime hours (7 pm to 7 am) at 350 ft (106.7 m) from the noise source in residential, agricultural, and rural zones. COGCC Rule 802.b(1) increases the maximum permissible noise levels to 80 or 70 dBA during daytime and 75 or 65 dBA during nighttime, varying based on the distance of the nearest building unit, "for pipeline or gas facility installation or maintenance, or the use of a drilling rig, completion rig, workover rig, or stimulation." Furthermore, during the daytime, the permitted A-weighted noise levels may be increased by 10 dB for up to 15 min in a 1-h period. For low-frequency noise, levels greater than 65 dBC require the operator to send a low-frequency noise impact analysis to the COGCC that identifies any reasonable noise control measures.

While there is relatively little research on residential exposures and health concerns due to noise at O&G sites, several studies have documented health effects from noise exposure from other sources, such as traffic, wind turbines, airports, and railways. These studies indicate that noise starting at in the 50–55 dbA range can cause annoyance, nausea, and headaches, disturb sleep, impair cognitive performance, and is associated with an increased incidence of arterial hypertension, arterial stiffness, myocardial infarction, and stroke [16, 21–25]. For example, exposure to railway noise exceeding 50 dBA is related to an increased risk of cardiovascular diseases [26]; traffic noise in the range of 45–75 dBA was positively associated with

hypertension per 5 dBA increase [27]; and the relative risk of coronary heart disease increased with every 10 dBA increase in weighted day–night traffic noise levels between 52 and 77 dBA [28]. Exposure to low-frequency noise may cause issues such as stress, fatigue, nausea, headache, and sleep disturbance [24, 25, 29]. For low-frequency noise levels, 60 dBC is recommended (65 dBC maximum) for continuous operations in residential areas to minimize health concerns and issues [16]. Furthermore, if the fluctuation in dBC levels are substantial (±5 dBC), the low-frequency noise criteria should be reduced by 5 dBC, to 55 dBC, to minimize health impacts from low-frequency noise [16].

This study measured and evaluated A-weighted and C-weighted noise levels during construction and well drilling at a 22 O&G well pad in a residential area of Greeley, Colorado USA. To the best of our knowledge, this is the first study evaluating residential audible and low-frequency noise levels during petroleum drilling activities; drilling is often considered to have greater noise levels than other O&G operations, such as production [4]. Our objective was to compare measured noise levels around a multi-well pad to regulatory levels and noise levels that are documented in the literature to have potential for detrimental effects such as annoyance, sleep disturbance, headaches, nausea, or increased cardiovascular risk.

Materials and methods

Site information

We conducted noise monitoring at four residences located between 320 m (1049.9 ft) and 550 m (1804.5 ft) from the center of a large multi-well O&G site (Fig. 1) between February and April 2017. The site is permitted for 22 wells, 22 oil tanks, 22 separators, 4 vapor recovery units, 2 water tanks, 3 modular large volume tanks, and 2 lease automatic custody transfer units [30]. The well pad site, with the expected location of the wells, tank battery, area of disturbance from well pad construction, and 152.4 m (500 ft) setback buffer, is shown in Fig. 1 [30]. [1]The dates when the drilling commenced for the location and wells at the site ranged between 29 November 2016 and 23 February 2017; therefore, our sampling period was during a period of well pad construction and drilling activity. The operations at this site used sound mitigation best management practices including the use of a sound wall that is 32 ft in height surrounding the site and use of electronic or modern low-noise equipment [30].

[1] The exact location of noise sampling is not shown to protect the identity of the property owners.

Sound level meter measurements

Noise monitoring was conducted at four residential locations: one each to the south, east, northeast, and northwest of the site. Landowner permission was obtained to access the sites. The locations were confirmed at each subsequent date using a Garmin (Schaffhausen, Switzerland) eTrex VentureCx handheld global positioning system (GPS). The SLM measurements were conducted to exclude other noise sources to evaluate the noise specifically from the O&G operations, rather than from other industrial or community sources, such as the trucking activity from this site. Therefore, when using the SLM, if nearby intermittent community or city noises (e.g., barking dogs, lawn mowers, vehicles/trucks) were encountered during sampling, the researchers waited for those intermittent noises to stop before proceeding with their measurements.

A-weighted and C-weighted noise levels were recorded using a Larson Davis Sound Expert LxT1-SE-FF Sound Level Meter (SLM; Depew, New York) with a PRMLXT1L preamplifier, 377B02 microphone, and a WS001 3.5-inch diameter windscreen. The SLM was calibrated by the manufacturer prior to data collection and re-calibrated before and after each sampling date using a Larson Davis CAL200 set at 114 dBA. The SLM was mounted on a portable tripod and raised to approximately 1.4 m (4.6 ft) off the ground during measurement. Three 5-s measurements of the sound pressure level were taken at each location and the arithmetic average of these three measurements was used. The SLM measurements were collected at the same time as the continuous noise measurement maintenance visits. Noise measurements with a corresponding hourly or gust wind speeds of less than 16.1 kilometers per hour (10 mph) were included in the final data set; all other data were omitted [14]. Wind speed data were obtained from a nearby weather station from wunderground.com and noise measurements were matched with the nearest documented wind speed measurement. A total of 42 dBA and 40 dBC measurements were included in the 5 s SLM results.

Continuous noise measurements

Continuous noise measurements were conducted at the same four locations surrounding the well pad during the same period and location as the SLM measurements. Data were collected for approximately 1 month at the South and East locations from 27 January 2017 to 24 February 2017 and for 2 months at the Northeast and Northwest sites from 24 February 2017 to 24 April 2017.

Noise measurements were collected with Larson Davis (Depew, NY) Spark 703+ and Spark 706RC dosimeters each with a detachable 10.6 mm microphone/preamp with integrated 1 m cable (MPR001) and a windscreen. Noise

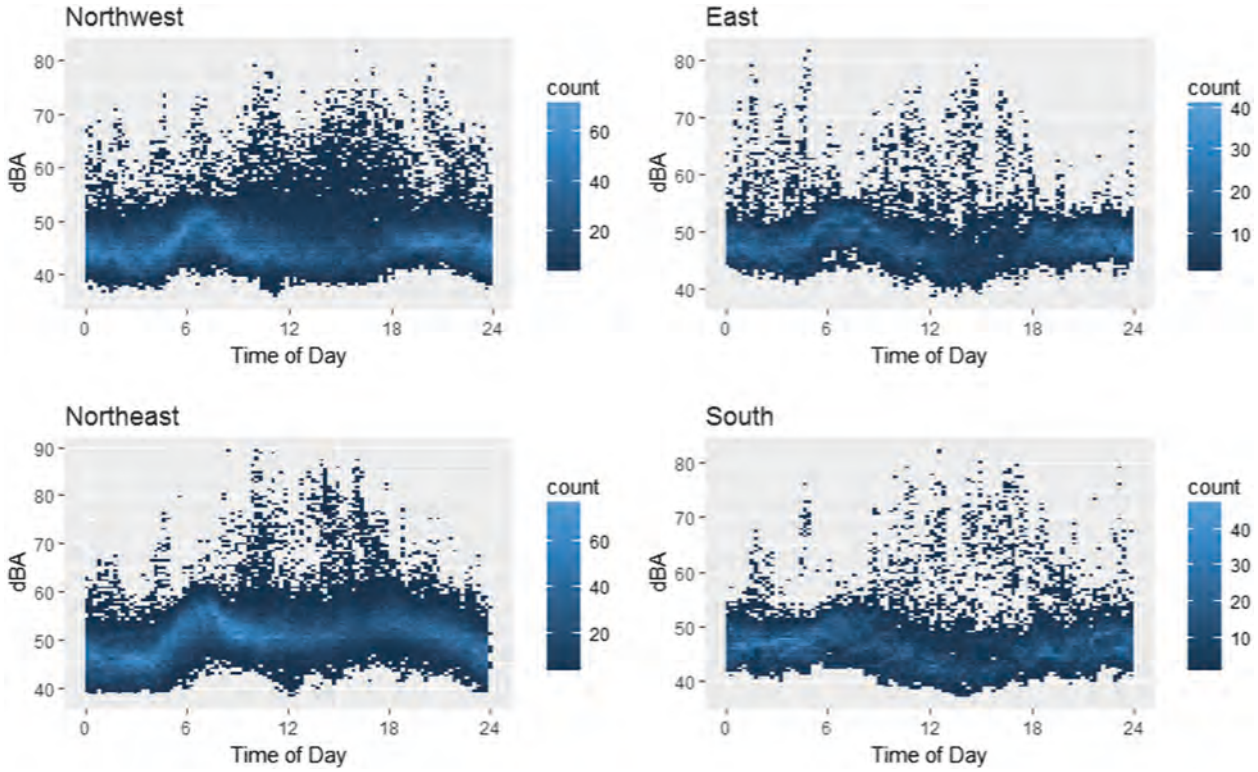

Fig. 2 Heat density of 1-min noise results for A-weighted noise data by time of day. A lighter shade is a greater count of values

measurements were recorded as the 1-min equivalent continuous noise level. The dosimeters were calibrated prior to deployment and were factory calibrated in November 2016. The dosimeter microphones were mounted 1.3 m from the ground and oriented towards the well pad site. Noise was not measured for short periods (30 min to an hour) during data downloads and equipment maintenance, which occurred every three to four days. A total of 244,584 dBA and 250,158 dBC 1-min noise measurements were recorded. Similar to the 5 s measurements, noise measurement with a corresponding average or gust speed greater than 16.1 kilometers per hour were omitted from our data analysis. As a result, 173,521 dBA (70.9% of the total) and 176,969 dBC (70.7% of the total) measurements were included in the analysis.

To consider the difference in day and night noise levels, measurements were divided at the benchmarks described in the COGCC regulations: daytime levels were considered from 7 am to 7 pm and nighttime levels were those between 7 pm and 7 am [20]. The noise levels at the various times in Figs. 2 and 3 were calculated using R v3.2.2 [31] and the ggplot2 package [32].

Comparison to health endpoints and COGCC rules

We used a 50 dBA threshold as a benchmark for all noise measurements regardless of time of day, which is the low end of noise levels that may cause adverse health effects, such as increased risk of cardiovascular diseases and hypertension [26, 27]. For low-frequency noise we used the 60 dBC benchmark for operations with continuous daytime and nighttime noise recommended to minimize known health impacts, such as nausea and headaches [16]. As we do not know the exact equipment operating at any given moment on the site, we also used the COGCC Rule 802 residential guidelines, which specify a maximum permissible level of 55 dBA during daytime and 50 dBA at night [20]. A noise level less than or equal to 55 dBA is also the US Environmental Protection Agency outdoor level recommended to prevent annoyance and activity disruption [33]. For low-frequency noise, we used the C-weighted noise level that would initiate a noise investigation, which is 65 dBC [20].

Statistics

We calculated the A-weighted and C-weighted average equivalent continuous sound level for the time period of interest ($L_{eq\ T}$) using the following:

$$L_{eq,T} = 10\ \log_{10}\left(\frac{1}{N}\sum^{1} 0^{0.1L_{eq}}\right)$$

where N is the number of 1-min intervals and L_{eq} is the measured sound level over the 1-min time period [34, 35].

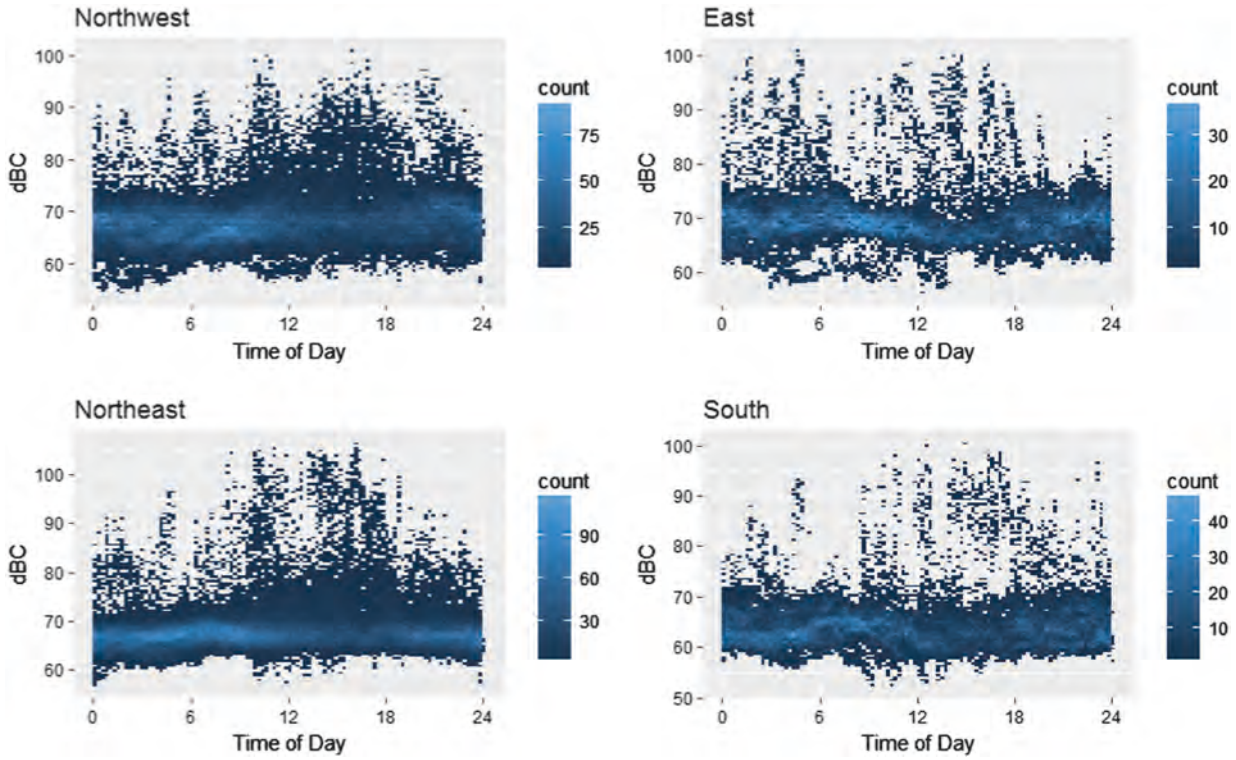

Fig. 3 Heat density of 1-min noise results for C-weighted data by time of day. A lighter shade is a greater count of values

Table 1 Short-term sound level meter 5-s data for A-weighted and C-weighted noise levels at the four locations

Location	East		South		Northeast		Northwest	
Weight	dBA	dBC	dBA	dBC	dBA	dBC	dBA	dBC
Count[a]	7	7	8	8	13	12	14	13
Minimum	43.2	59.8	34.8	58.5	41.7	62.3	42.2	63
Median	45.4	66.2	40.4	62.1	50	65.9	45.2	65.6
Maximum	50	68.1	50.1	67.6	59.8	82	50.8	76.7

[a]Count includes the number of 5 s noise measurements taken at each site over a 3-month period after omitting the data with high wind

We used the absolute difference between decibel levels when describing the difference between recorded or equivalent continuous noise measurements values.

Results

The summary of the results of the periodic three 5 s A-weighted and C-weighted SLM daytime noise level measurement at the four sampling locations are shown (Table 1). These measurements were taken during time periods without outside community noise or noise from traffic or trucking associated with the O&G operations. The median audible noise measurements ranged from 40.4 dBA at the South location to 50 dBA at the Northeast location. The median low-frequency noise levels ranged from 62.1 dBC at the South location to 66.2 dBC at the East location. The maximum A-weighted noise measurement was 59.8 dBA at the Northeast location and the maximum C-weighted noise measurement was 82 dBC at the Northeast location.

The summary of the results from the monthly continuous noise monitoring are shown for A-weighted (Table 2) and C-weighted (Table 3) noise levels. The monthly equivalent continuous levels ranged from 51.5 dBA at the northwest location to 60.2 dBA at the northeast location. The median levels were similar to arithmetic means and variance across locations were similar. The minimum 1-min equivalent continuous level recorded was 35.9 dBA and the maximum 1-min equivalent continuous noise measurement was 89.2 dBA. The low-frequency monthly equivalent continuous noise measurements ranged from 73.1 dBC at the northwest location to 80.0 dBC at the northeast location. The minimum observed 1-min equivalent continuous noise level was 52.4 dBC and the maximum was 106.4 dBC.

The percentage of 1-min noise measurements over levels of concern are also shown by location for dBA (Table 2) and dBC (Table 3). The maximum percentage of

Percentage of measurements >50 (night)	24.4%	13.9%	36.2%	11.5%	42.8%	11.6%

[a]Only includes data when hourly average wind speed or wind gust speed is less than 10 mph

measurements found to exceed 50 dBA was 77.5% during the day and 42.8% during the night, both occurring at the Northeast location during the second visit. During the day, the maximum percentage of measurements that exceeded 55 dBA was 24.2%, also at the Northeast location. For low-frequency noise, 100% of the measurements were found to exceed 60 dBC for both day and night measurements at the Northeast location during visit 2. More than 98% of the measurements during the day and night at the east, northeast, and northwest locations were greater than 60 dBC.

Across all locations from the 3-month period, 41.1% of daytime and 23.6% of nighttime 1-min equivalent continuous noise measurements exceeded 50 dBA and 12.7% of daytime and 4.5% of nighttime measurements exceeded 55 dBA. For low-frequency noise, 97.5% of daytime and 98.3% of nighttime measurements exceeded 60 dBC and 80.0% of daytime and 78.8% of nighttime measurements exceeded 65 dBC.

A time series of daily dosimeter A-weighted and C-weight noise level readings are shown for each of the four locations in Fig. 2 and Fig. 3, respectively. For each location, A-weighted noise increased in the morning, between 7 am to 8 am, decreased around 11 am, and a second increase was observed again around 4 pm (16:00). The C-weighted noise level results follow a similar pattern as the A-weighted noise levels; however, the peaks are less pronounced.

Discussion

This study measured and evaluated continuous audible and low-frequency noise levels during O&G well pad construction and drilling in a residential area. The monthly equivalent continuous noise levels were as low as 51.5 dBA and 73.1 dBC and as high as 60.2 dBA and 80.0 dBC. This work advances the literature on the environmental noise from O&G operations by collecting continuous 1-min A-weighted and C-weighted noise level data over a 3-month time period. The data were collected during construction and drilling of a large, multi-well pad in a residential area, a phenomenon that is increasingly common in the US as O&G development transitions towards larger operations on fewer pads, especially in more populated areas.

The maximum and monthly equivalent continuous A-weighted noise measurement results are of note because they are in excess of the 50 dBA threshold that may cause adverse health effects, such as increased risk of cardiovascular diseases and hypertension [26, 27]. The low-frequency noise levels we observed are of concern as they often exceeded the level of 60 dBC recommended to minimize impacts such as nausea and headaches [16]. The equivalent continuous noise measurement levels recorded at the northeast location were 60.2 dBA and 80.0 dBC from 24 February 2017 to 27 March 2017, which significantly exceeds the 50 dBA and 60 dBC recommended levels. Also, 41.1% of daytime and 23.6% of nighttime dBA 1-min

Table 3 Summary statistics for the 1-min C-weighted noise levels collected at varying distances around an oil and gas production site measured over 3 months

equivalent continuous noise measurements were found to exceed 50 dBA and 97.5% of daytime and 98.3% of nighttime measurements were found to exceed 60 dBC. As the review by Basner et al. (2014) notes, nighttime average outdoor noise levels between 40 and 55 dBA are associated with adverse health effects, which highlights the long-term impact of continuously operating O&G sites. The low-frequency noise from O&G operations are at levels that may cause the common symptoms reported by individuals who reside in close proximity to O&G operations, such as sleep disturbance and headaches [11].

The 5-s SLM data were collected to explore the short-term noise levels without background noise or noise from nearby trucking activity. These results were collected in person so that the noise levels were attributable to the well pad alone and the methods more closely align with the shorter-term data collection often used to evaluate industrial noise levels. The maximum SLM measurements were 59.8 dBA at the Northeast location and 82 dBC at the Northeast location, which also exceed associated health concerns. Overall, the SLM values reported are indicative of the noise directly attributable to the O&G operations during the construction and drilling of this well pad.

The results of the operator's baseline noise test at this site conducted on 11 November 2016 found a 42.8 dBA and 55.8 dBC average noise level over a midday 1-h period with calm wind (Session Report 12/20/2016, downloaded from COGIS). The operator baseline levels were recorded at the south end of the site, approximately 40 ft from the nearest home. Our monthly equivalent continuous noise measurement results indicate an increase of between 8.7 to 17.4 dBA and 17.3 to 24.2 dBC over the operator's 1-h baseline measurement, depending on the time and location. Thus, the noise levels increased substantially over the baseline measure during the well pad construction and drilling. While there may be some differences between the operator's baseline noise measured at the well pad site and the noise levels recorded at our monitoring sites near homes, the operator's baseline measurements are likely a good approximation of baseline noise at four monitoring locations in this residential area.

The site we studied incorporated numerous best management practices for noise reduction. Their sound mitigation best management practices included: (1) 9.75 m (32 ft.) sound walls around the perimeter of the location during drilling and completion; (2) compliance with the municipal noise regulations (which includes requirements such as venting exhaust away from occupied buildings and special mitigation strategies for sensitive areas such as near schools and hospitals; (3) use of electric or modern low-noise diesel to power equipment; (4) continuous monitoring of noise by the operator; (5) completion of a baseline noise study; and (6) the operator to remedy sound levels exceeding 65 dBC measured from the nearest building unit within 48 h [30].

We find that the use of these best management practices was not sufficient to reduce noise levels to those below the operator find that the use of these best management practices was not sufficient to reduce noise levels to those below the operator proposed levels or levels associated with potential health concerns in the scientific literature.

Previous research evaluating noise under maximum operating conditions in unpopulated areas found all drilling, hydraulic fracturing, and completion at O&G sites to have noise levels greater than 65 dBC at locations with and without sound walls [14]. Based on our results, the dBC levels around this O&G operations site were also consistently greater than 65 dBC. For example, 93.1% of the nighttime measurements were found to exceed 65 dBC at the Northwest location from 24 March 2017 to 24 April 2017. Yet, the direct comparison of studies relating to noise from O&G operations is challenging due to the varying site equipment and operations, sound mitigation practices in place, and the presence of other community noise sources.

This study has several features that are improvements over existing studies, including long-term noise measurements at multiple locations and the simultaneous measurement of both low- and high-frequency noise. The continuous noise measurements demonstrate the environmental noise levels in this residential area from all activities, including from other community noises and trucking activity commonly associated with O&G development, were well into the range thought to affect health. Trucking activity at this site was reported as a concern to the COGCC by residents [30]. The concerns reported by community members near this location confirm that the noise levels from O&G trucking activity may be considered a nuisance for those residing near these operations and have the potential to cause stress, annoyance, sleep disruption, and cardiovascular impacts. Furthermore, the comparison of the 3 months of noise levels to the operator's baseline data collected from this site highlight the relevance and usefulness of the continuous noise data. Through the use of 1-min noise data collected continuously over a month at each location, which is over a much longer duration and offers more information than is generally reported at one of these sites, this work offers a more thorough understanding of the noise levels experienced by local residents living near a site with 24-h O&G operations.

The limitations of this work include representativeness of our measures and the averaging approach used to capture levels over time. These results, based on the continuous sampling at a single large multi-well pad over 3 months, may not be indicative of the noise from O&G operations at other locations with different topography, wind patterns, or noise mitigation strategies. Other noise sources from the community, such as local traffic or other household noises including other electronic or mechanical equipment, are present and will differ from site to site. Therefore, the noise levels we observed may not translate to the construction and drilling of all well pads and our results may or may not be representative of other multiwall pads with similar equipment. A second limitation is that due to the methods used to estimate long-term averages, the fluctuations from short-term loud noise levels that are less than 1 min in length may not be captured [16]. Future studies should consider pairing continuously collected noise data with operations data to separate noise from O&G operations from other residential or community noise sources.

Additional studies are needed to determine if the noise levels we measured are representative of other communities with large, multi-well O&G construction and drilling sites. These studies could also assess the impact of these levels on resident health, and whether mitigations that have been implemented, such as sound walls and electric powered equipment that reduce engine noise, can be further modified or managed to be more effective in reducing community noise exposure for nearby residents. Future efforts will document noise and air pollution levels at this site during hydraulic fracturing ("fracking") and the production stage. The noise levels surrounding these operations could also potentially be recorded using crowdsourcing methods and smartphone technology [36–39]. Overall, future research should focus on documenting noise level and resident health concerns due to high level, shorter duration audible and low-frequency noise as well as impacts on susceptible populations that may be disproportionally impacted by noise from O&G operations [4].

The measured noise levels in this and another study highlight the inadequacy of the current 152.4 m regulatory setback distance between O&G operations and residential buildings in Colorado [14, 20]. These data indicate that exposures to both audible and low-frequency noise exceed the level that can cause annoyance, sleep disturbance, cardiovascular impacts, and other health effects. We measured the noise levels at distances between 320 m (1049.8 ft) and 550 m (1804.5 ft) from the center of the well pad, which exceeds the regulatory setback distance. To the extent that this site is representative of O&G operations in Colorado, these results suggest that a setback distance of more than 500 ft (152.4 m), or other noise mitigation, will likely be needed to reduce community noise to levels below both health-based and COGCC standards.

Specific to Colorado regulatory efforts, we recommend that equivalent continuous noise levels for 24/7 operations should be required to be kept below 60 dBC to minimize annoyance and other impacts related to low-frequency noise [16]. Given the typical variation in dBC levels, it may also be appropriate to decrease the low-frequency noise criteria to 55 dBC to minimize health impacts from low-frequency noise. The current COGCC recommendation that 65 dBC will trigger an investigation by a noise consultant is in

our judgment unlikely to reduce noise levels without changes in both site operations, mitigation approaches, and enforcement. Indoor low-frequency noise levels should also be considered as low-frequency noise is often less attenuated by homes and buildings potentially creating higher indoor levels through standing wave patterns in rooms [25]. The investigation of noise often requires a complaint and may not capture the highest noise levels. Publicly available continuous real-time noise monitoring results may offer much greater reporting, transparency, and accountability for both operators and nearby residents. Furthermore, the COGCC noise levels for residential areas (50 dBA) and other specific activities, such as the use of drilling rigs (75 or 70 dBA), should be reconsidered to align with the 40 dBA nighttime levels that are recommended to prevent health effects from nighttime noise [24].

Conclusion

Average noise levels at an O&G well pad during construction and drilling exceeded levels associated with annoyance, sleep disturbance, and cardiovascular health effects in studies involving noise sources such as traffic, airport, wind turbine, and railway related noise pollution. Furthermore, while low-frequency noise has received less attention than traditional A-weighted noise level research, these results highlight the need to further understand both the levels and health impacts of low-frequency noise in residential areas during drilling operations. The measurements collected during this study were also found at a distance greater than 152.4 m, thus highlighting that homes in closer proximity to operations will likely experience noise exposure at levels of concern even with the implementation of sound mitigation best management practices. Overall, further research is needed to address noise levels and test appropriate noise mitigation interventions to reduce exposure near O&G operations in residential areas.

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Corina Jaffarian

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

If these projects are so profitable, they don't need public funding. On top of that, they're destroying our environment.

Sincerely,

Dallas Dean

Subject: comment on STAMP Data Center Complex

To the Genesee County Economic Development Center (GCEDC):

My name is Courtney M. Williams, Executive Director of the Westchester Alliance for Sustainable Solutions. WASS is a coalition of organizations based in Westchester County working to address environmental racism impacting our communities.

We submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

Our organization is committed to the just implementation of the Climate Leadership and Community Protection Act. The proposed data center lies within a Disadvantaged Community, as designated by the Climate Justice Working Group, which subjects this project to review under the CLCPA. Per Section 7(3) of the law, in considering and issuing permits, licenses, and other administrative approvals and decisions, all state agencies, offices, authorities, and divisions shall not disproportionately burden Disadvantaged Communities. Given the threats posed by this project to the Tonawanda Seneca Nation which lies within this Disadvantaged Community, and our overarching respect for Indigenous sovereignty, we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of NYS Department of Environmental Conservations' recommendations with respect to the SEQR environmental review process, and call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts;

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public; and

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of

the Tonawanda Seneca Nation. It also threatens our Climate Law and violates the sovereignty and way of life of the Tonawanda Seneca Nation.

In closing: we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of DEC's recommendations with respect to the SEQR environmental review process, and call on GCEDC to reject the incentives application from STREAM US Data Centers.

Sincerely,
Courtney M. Williams, PhD

What is water worth? Sadly, to some, it is worth a whole lot of money. We would not be here if it weren't for our sources of fresh water. The Finger Lakes and Great Lakes region enabled some of humanity's most impressive feats of community and democracy - the Haudenosaunee confederacy, whose political system inspired America's earliest political figureheads and whose land continues to be threatened today. The truth is that water is priceless. It is necessary for all life: for ourselves, for our children and our

children's children; for the trout I love to catch and the trees I love to read under. I wonder, do you know how valuable water is? Do you know that is increasingly finite as a resource - because of projects like this? If you move forward with this project, I will see you again. I will be there when your wells run dry. Then, like now, I will offer my help. Only then, unlike now, that help will necessarily be material and not just a word of caution. The next time you drink a glass of water, remember this letter. Think of this word of caution and know, that faucet will not flow forever.

Sincerely,

Clayton Lyons

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Forrest Teske

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Claire S

Mrs. Hochul, Ai data centers would absolutely not make living in NY more affordable, which is what your constituency is hoping youll accomplish. I can only see letting data centers move in here that it will make the constituency upset at you and not vote for you again.

Sincerely,

Sydney Schlieder

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

No, No and again, No. Stop this monster data center that uses way too many resources. :(

Sincerely,

SANDRA STEUBING

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Resources over data centers! Stop the madness.

Sincerely,

Amanda Fox

AI Data Centers are worse than Kodak was for the state environment, not the so called Welfare. The environment. Kodak left such a rot that it will take decades to resolve that people are willingly ignoring while 'new' AI Data Centers are increasingly active drains on the environment that can barely deal with the mess left over. If we go with the centers you will make Genesee County's environment damage

comparable to Kodak over a much shorter timetable that does not include any 'real' long term building. These are replaceable buildings and tech, the damage from it isn't.

Sincerely,

Timothy Dempsey

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Don't dehydrate us over money. That money will run out faster than the water you would take from us all!

Sincerely,

Hev Calhoun

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Zach Mills

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

The proposal to build a data center in NY is abhorrent. Data centers are disgusting uses of taxpayer funds and ruin the environment. I oppose any and all propositions to build any data center ANYWHERE in NYS.

Sincerely,

Nicholas Cornish

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Cody Leach

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Hello,

As a Native American woman who's ancestors and family lived and still live on this sacred land, I fully oppose the destruction of it with the building of data centers! We work too hard taking care of this Mother Earth and loving every one of its creatures to allow such a destructive act towards it. No data centers.

One of your taxpayers,

Kiowa Mt.Pleasant

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

I stand with Reps. Bernie Sanders and Ms. Ocasio-Cortez. We need a moratorium on data centers until the problems of pollution and excessive energy use are solved. We must protect the land. The people of New York and the Seneca Nation cannot afford th projected raise in energy rates that comes along with these data centres.

Sincerely,

Christine Gervais

We've seen time and time again that the projects increase energy costs, divert critical infrastructure funding from projects which actually benefit the people in their communities, and contribute to lowering the health outcomes for those communities as well through the misappropriation of water resources. Please save our community and cancel this project. The meager economic benefit to the area is not at all worth the long term negative economic, social, and environmental outcomes.

Sincerely,

Daniel Speiser

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Olivia Gallipeau

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Data centers such as the one proposed in this project take more from our communities than they give. Besides creating water and noise pollution, the economic burden of higher energy costs pushed onto our community will negatively affect more people than temporary job creation. Companies like this should be paying more into our communities rather than getting unnecessary tax breaks. Stop STREAM from being a vampire to our local economy.

Sincerely,

Lehna Kitzel

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Iliana Gomez

We don't NEED AI Data Centers there should not only not be ANY Tax Abatements. In fact there should be a $500 Million Dollar Tax paid by the Private Corporation that will own the Data Center before ANY movement is made. That $500 million tax should be used to offset the damage to the waterways. Any increased demand on roadways and infrastructure should be born entirely by the Corporate Owners of

the Data Center. They will need to provide their OWN Energy Source or bare the costs ENTIRELY of upgrades to the energy infrastructure to support this unnecessary Data Center.

The Property Tax Rate on the Data Center should be 20% higher than the highest current property tax rate without offsets or Abatements.
If corporations want to come in and take our land and resources it should be for a PREMIUM rate not a decreased incentive.
Finally, the decision to have or not have should be totally that of my siblings in the Seneca Nation of Tonowanda.

Sincerely,

Tree Moonsong

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Josh morris

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Data centers like these will take away natural resources that are essential for both the health of the environment and the people that live in it. Life is hard enough for the everyday person, and we need improvements that contribute directly to the betterment of the life and dignity of the citizenry.

Sincerely,

Louie Brown

Communities that introduce data centers frequently frequently suffer from skyrocketing utilities costs and wildlife disruption. The impact of data centers has been shown to not just impact the communities they are placed within, but communities surrounding and around the country as well. By signing this petition, I hope and wish to set a precedent with many others that the introduction of data centers will be met with outcry

Sincerely,

Lillian Scarpulla

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Courtney Hawkins

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Frank Pietrowski

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I would also like to mention that areas that have implemented such data centers in their local communities now struggle with rising costs related to electricity use and negative health effects. Whatever short term gains are projected for this project will be quickly outstripped by such costs and the public outrage that will follow.

Sincerely,

Arthur Tapia

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

It is our duty to care for our environment as responsibly as we possibly can in order to make a sustainable and healthy future for our community. Destroying our natural resources and green spaces is a short cut to destroying our community and planet. It is completely contrary to our duty to protect our people and our earth. Selling out to data centers and tech corps will undoubtedly deplete the resources necessary for us to live safely and healthfully, while also eliminating any hope for reversing the already imminently approaching eco-collapse. It is unconscionable that building this data center is even being

considered. Represent your community and protect us, our environment, and our future from these obvious, horrifying dangers at the hands of evil eco-terrorists.

Sincerely,

Elizabeth DeSimone

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I was outraged to learn that GCEDC has uploaded a new revision of the SEQR application and supporting documents to the GCEDC website sometime between April 7 and April 8.

I demand that GCEDC further extend the date of the deadline for written comments, and re-set the date of the supplemental hearing for a time when it is reasonable to expect that those who would be most impacted by the data center complex have had a chance to review and produce meaningful comment on the new materials.

You must show greater respect for public participation in this review process. The stakes of this proposed project - in terms of impacts to our environment, public health, economic well-being, and quality of life - are simply too high.

We local residents all lose!!! Face reality of the impacts on our lives.

Sincerely,

April Gow

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Genesee County faces a severe and ongoing insufficiency of both water and water infrastructure. The County has long struggled to adequately finance its Water Supply Project, which would bring up to 8 MGD daily of much needed water from Lake Ontario into the County via an agreement and infrastructural tie-ins with the Monroe County Water Authority

Sincerely,

Elisha Sasse

Subject: Stop the STAMP Data center

To whom it may concern:

I am not from your general area but I am a NY state resident (Chautauqua NY) who has been following this story. Speaking for the whole state, I believe these data centers NEED to stop. You're just inviting more in and it is making a mess of rural towns. There is now a data center attempting this same thing in my town of Portland, NY and I blame every single one of you who set this precedent, who welcomed these monstrosities into our beautiful state unchecked.

They will ruin our water, stress our electrical grid & skyrocket our electricity bills even more than they already are. AI and AI data centers aren't even a necessary thing. I'm all for progress but do we really need AI and AI data centers for the things that people are using them for? Let's be reasonable. All of this AI tech is so frivolous and has been implemented so carelessly and I don't see it ending well.

Anyhow, just know that you've got opposition far and wide. We are all watching and the people will fight this together!

Regards,
Kelly Perlette

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

The insanity of NYS supporting this is just absurd!

Sincerely,

Melinda Friday

Subject: Comment for hearing

Dear Hearing Member Officials,

Perhaps you think the short term benefits will obscure the public's memory. If you, elected officials, property owners, business people, gcedc members have any agency use it to protect people. Data is not people. Data Centers and corporations entitle themselves to enough public resources as it is---and destroy them. The entire state of Maine banned any new data centers, let's follow their lead. Reject, abandon the STAMP Project.

People have been against this project for years. If you have willpower you will use it to make the future safer. Safety is clean water and preseved natural spaces. Safety is building trust with your community not wilfully ignoring them for personal, short sighted gains.

Please stop the STAMP Monster Data Center. The children will respect you more for listening and acting to protect the collective, even if it makes you uncomfortable. The elected among you maybe wont need you to have the same donors as last election. Be swayed toward peace, away from destruction. Please.

Thank you, Holiday Gay Buffalo, NY 14215

New York State's ecosystems are vital to the well-being of humans, animals, and plants. This project, like other data center operations, poses a dire threat to the biodiversity and sustainability of our communities. Additionally, these interconnected woods and waterways that are under areas of impact are crucial to the sovereignty and autonomy of Indigenous communities of New York who are integral in their land stewardship practices of the 7 generations model. I strongly urge the proposition of this project

to consider the longevity of our local environments instead of favoring technological trends that may fade out and flux depending on frail structures of policies and investments. Thank you for your consideration!

Sincerely,

Garret Croyle

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Sandra R Workman-Miles

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I was outraged to learn that GCEDC has uploaded a new revision of the SEQR application and supporting documents to the GCEDC website sometime between April 7 and April 8.

I demand that GCEDC further extend the date of the deadline for written comments, and re-set the date of the supplemental hearing for a time when it is reasonable to expect that those who would be most impacted by the data center complex have had a chance to review and produce meaningful comment on the new materials.

You must show greater respect for public participation in this review process. The stakes of this proposed project - in terms of impacts to our environment, public health, economic well-being, and quality of life - are simply too high.

Sincerely,

Charlotte Smith

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

- **NYS would lose out on $716 million in sales taxes!!! from this deal**
- There is an assumption that if not for the tax breaks offered, the company in question would not come. Academic research has shown that 75% or more data center projects would locate in a community even without subsidies
- an independent audit of Georgia data center incentive program also found that 70% of data centers would locate in the state without the tax breaks.

Sincerely,

Justin Kieber-King

These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Sophie Brown

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

- Genesee County faces a severe and ongoing insufficiency of both water and water infrastructure. The County has long struggled to adequately finance its Water Supply Project, which would bring up to 8 MGD daily of much needed water from Lake Ontario into the County via an

agreement and infrastructural tie-ins with the Monroe County Water Authority

- Now, GCEDC is trying to leverage this vulnerability by hinging the financing of Phase 3 of this project on fees paid into the infrastructure project by STREAM
- Read this letter to the editor for more background
- GCEDC must not add additional vulnerability to Genesee County residents' and farms' access to adequate, safe drinking water by hinging critical financing for infrastructural upgrades on STREAM and Apollo: who don't care about the interests of Genesee County
- The Rochester Regional Transportation Authority would lose out on $6.2 million in taxes from the requested tax abatements
-

Sincerely,

Ishmael Walker

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Noise and other health concerns

- Extensive questions remain about the claims regarding noise made in the application
- GCEDC does not plan to conduct an independent noise study.
- 24/7 noise produced by data centers is associated with long-term mental and physical health effects.

Threatened and Endangered Species

- Onsite occurrence of Endangered Species including Heartleaf Plantain, Least Bittern, Short-eared owl, Northern Harrier, Bald eagle, Northern Long Eared Bat
- The Iroquois National Wildlife Refuge, located 5 miles away from the STAMP site, is home to multiple pairs of nesting Bald Eagles

Sincerely,

Cal Herrera

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

This data center would be disastrous for my community. It would harm the environment around me. It would drive my electricity bill up. It would collect data on me and my neighbors, expanding mass surveillance efforts. All so a rich man can purge resources from my community and my loved ones. This project would severely hurt the Tonawanda Seneca Nation that lives there, as well as having an extremely negative ripple effect, impacting all residents of Upstate and Western NY.

Sincerely,

Ariana Wisenburn

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Jennifer Frost

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

The earth cannot be replaced!

Sincerely,

Celeste Holcomb

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

No data centers in western NY!

Sincerely,

Nora Gilliam

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I oppose the planned Project Double Reed data center at STREAM because of the harm it would cause both to the local economy and natural habitat. Let's be better neighbors, better stewards of the land - better human beings - than to approve such a project. What kind of world do you want for your grandchildren? What do you want them to think of you?

Respectfully,

Jean Dommermuth

Sincerely,

Jean Dommermuth

Subject: Public Opinion

Good Morning,

I have attended only one board meeting so far, but the disconnect between the board's conversations and public opinion is apparent and concerning. While the board has done a fine job of trying to lay everything out clearly, very little could ever be done to change the community's opinion. Even if it were the case that this project would not affect the lives of Genesee county residents one bit, it would not shake the looming threat that many feel from the presence of private equity-backed megacorporations in our community. Humans are quick to form opinions, whether they are based in fact or not is often irrelevant. I have no doubt that the establishment of this facility will drive people out of the county, plummet the public opinion of our local leadership, and all around make Genesee county a less prosperous environment.

Thank you for your attention,
Lily M

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I grew up along Seneca Lake and have witnessed firsthand the destruction of our finger lakes ecosystems by corporations who do not have our communities' best interests in mind. This land is a disposable resource to them, to be extracted from and then tossed aside when it no longer generates profits. We absolutely do not need or want this data center here.

Sincerely,

Clara Riedlinger

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I was outraged to learn that GCEDC has uploaded a new revision of the SEQR application and supporting documents to the GCEDC website sometime between April 7 and April 8.

I demand that GCEDC further extend the date of the deadline for written comments, and re-set the date of the supplemental hearing for a time when it is reasonable to expect that those who would be most impacted by the data center complex have had a chance to review and produce meaningful comment on the new materials.

You must show greater respect for public participation in this review process. The stakes of this proposed project - in terms of impacts to our environment, public health, economic well-being, and quality of life - are simply too high.

Sincerely,

Lily Macaluso

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

streampublichearing@gcedc.com

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

The Great Lakes region should be protected for future generations, especially as one of the largest masses of fresh water in the world. Allowing massive data centers (that provide little to no employment opportunities to locals) to use our land and our water, drive up energy costs, and create unknown environmental affects jeopardizes the lakes for not only us today, but future generations as well. Similar data centers in other areas have created water, air, and noise pollution that already have caused adverse health affects for nearby populations.

Sincerely,

Sari Oister

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Stop with these horrible data centers!!!! The long term damage is not worth the cost.

Sincerely,

bob jurgensen

From: Madeline Nyblade <mnyblade21@gmail.com>
Sent: Wednesday, April 15, 2026 8:35 AM
To: streampublichearing@gcedc.com
Subject: Statement for Public Hearing
Attachments: Nyblade_Statement_3_14_26.docx

Hi,

Here is my statement for the public hearing (copy attached as well):

My name is Dr. Madeline Nyblade. I am a hydrologist and researcher who has conducted independent analysis of the flooding, wetland, and stormwater impacts of development at STAMP. I am submitting these comments in my personal capacity as a scientist, not on behalf of any institution.

All stormwater from both proposed data center campuses flows downstream onto Tonawanda Seneca Nation territory, through the Tonawanda Wildlife Management Area, and into the Iroquois National Wildlife Refuge. Approximately 351.6 acres of wetlands on Nation lands receive surface water directly from STAMP. The Nation has not been meaningfully consulted.

The stormwater plans submitted for this project were not adequate. NYSDEC reviewed them in February and identified more than 20 significant deficiencies. Drainage maps did not match actual site conditions. The rainfall modeling methodology did not meet state standards and was replaced entirely. Three stormwater basins were modeled to fail during major storm events and had to be redesigned. The wrong sediment controls were specified throughout the plans. These are not paperwork problems. These are fundamental flaws in a system meant to protect downstream water quality — including the Nation's waters.

The existing stormwater basin at the South Campus — inherited from the prior Plug Power project and proposed to be retained without assessment — appears orange in satellite imagery. There is no inspection record, no performance data, and no water quality sampling in the submitted documents to confirm it is functioning or explain why the water present is orange.

Wetlands have not been properly evaluated. The applicants' own documents state that infiltration testing confirmed poorly draining soils and that perched water tables are likely present seasonally above an impermeable clay layer. The USDA Web Soil Survey maps poorly drained soils across both parcels. Satellite imagery shows wet areas on site. Yet neither plan documents a wetland jurisdictional determination as required under New York's regulations that took effect January 1, 2025. My independent analysis finds wetland presence on this site to be likely. Vernal pools — which are common on surrounding lands and for which the site conditions are suitable — were never screened for at all.

The flow direction of this site's stormwater remains scientifically unresolved. USGS stream mapping and the National Hydrography Dataset show these waterways draining toward Oak Orchard Creek — not Tonawanda Creek as NYSDEC and the applicant now assert. Which way the water flows determines which communities bear the risk and which water quality standards apply.

NYSDEC has not issued permit coverage. The regulatory process is not complete. Taxpayer money should not subsidize a project with unresolved water quality violations, an unevaluated wetland record, and undocumented downstream impacts on sovereign Nation lands.

I oppose the financial incentives request submitted by STREAM US Data Centers. I demand that GCEDC follow all of NYSDEC's recommendations, a proper wetland determination be conducted, and

the Tonawanda Seneca Nation be meaningfully consulted. And I call on GCEDC to reject the incentives application from STREAM US Data Centers.

Thank you.

Sincerely,

Madeline Nyblade

Public Hearing Statement STAMP / STREAM US Data Centers (Project Double Reed) Town of Alabama Public Hearing – April 15, 2026 Submitted by: Dr. Madeline Nyblade, Ph.D.

The views expressed in this statement are my own personal and professional opinions and do not represent SUNY College of Environmental Science and Forestry or any other institution.

My name is Dr. Madeline Nyblade. I am a hydrologist and researcher who has conducted independent analysis of the flooding, wetland, and stormwater impacts of development at STAMP. I am submitting these comments in my personal capacity as a scientist, not on behalf of any institution.

All stormwater from both proposed data center campuses flows downstream onto Tonawanda Seneca Nation territory, through the Tonawanda Wildlife Management Area, and into the Iroquois National Wildlife Refuge. Approximately 351.6 acres of wetlands on Nation lands receive surface water directly from STAMP. The Nation has not been meaningfully consulted.

The stormwater plans submitted for this project were not adequate. NYSDEC reviewed them in February and identified more than 20 significant deficiencies. Drainage maps did not match actual site conditions. The rainfall modeling methodology did not meet state standards and was replaced entirely. Three stormwater basins were modeled to fail during major storm events and had to be redesigned. The wrong sediment controls were specified throughout the plans. These are not paperwork problems. These are fundamental flaws in a system meant to protect downstream water quality — including the Nation's waters.

The existing stormwater basin at the South Campus — inherited from the prior Plug Power project and proposed to be retained without assessment — appears orange in satellite imagery. There is no inspection record, no performance data, and no water quality sampling in the submitted documents to confirm it is functioning or explain why the water present is orange.

Wetlands have not been properly evaluated. The applicants' own documents state that infiltration testing confirmed poorly draining soils and that perched water tables are likely present seasonally above an impermeable clay layer. The USDA Web Soil Survey maps poorly drained soils across both parcels. Satellite imagery shows wet areas on site. Yet neither plan documents a wetland jurisdictional determination as required under New York's regulations that took effect January 1, 2025. My independent analysis finds wetland presence on this site to be likely. Vernal pools — which are common on surrounding lands and for which the site conditions are suitable — were never screened for at all.

The flow direction of this site's stormwater remains scientifically unresolved. USGS stream mapping and the National Hydrography Dataset show these waterways draining toward Oak Orchard Creek — not Tonawanda Creek as NYSDEC and the applicant now assert. Which way the water flows determines which communities bear the risk and which water quality standards apply.

NYSDEC has not issued permit coverage. The regulatory process is not complete. Taxpayer money should not subsidize a project with unresolved water quality violations, an unevaluated wetland record, and undocumented downstream impacts on sovereign Nation lands.

I oppose the financial incentives request submitted by STREAM US Data Centers. I demand that GCEDC follow all of NYSDEC's recommendations, a proper wetland determination be conducted, and the Tonawanda Seneca Nation be meaningfully consulted. And I call on GCEDC to reject the incentives application from STREAM US Data Centers.

Thank you.

Dr. Madeline Nyblade, Ph.D. Submitted in personal capacity. The views expressed herein are solely my own and do not represent SUNY College of Environmental Science and Forestry or any other institution.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I would like a piece of the tax breaks too I oppose data centers that do not help the average working people in my community

Sincerely,

Tom Prisaznuk

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

When we lived in Batavia, we would often walk in the Iroquois Wildlife Refuge, which I know is home to many sensitive and ecologically vital species. I am opposed to anything that would put this treasure at risk. Which we all know the data center would.

I am opposed to anything that would waste or endanger the precious resource that is Lake Ontario or harm our Seneca Nation neighbors.
Please don't build this data center.

Sincerely,

Christine Carnahan

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

If you continue to privatize this country they will come for you as well. and the people are unsettled and unhappy, keep AI away.

Sincerely,

Asarebea Djan

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

To the Genesee County Economic Development Center (GCEDC):

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Mary Lupien, Councilmember, East District
Stanley Martin, Councilmember, At-Large

Tuesday, April 14, 2026

To Whom it May Concern,

Rochester sits on the unceded land of the Onöndowa'ga:' (Seneca) people of the Haudenosaunee Confederacy. Our city exists because of displacement and broken agreements. That history of taking land without consent is not just something to acknowledge. It is something we are responsible for changing.

The proposed STAMP data center continues a pattern of decisions made without respecting Indigenous sovereignty. It threatens the Tonawanda Seneca Nation's land, water, and way of life. It also reflects what happens when projects move too fast and ignore the knowledge of those who have stewarded this land for generations. Land acknowledgments without action are empty. If we are serious about justice, we must support the Nation's right to protect their land and say no.

This project asks everyday people to carry the environmental and economic costs while a private developer takes the benefit. The harm will not stop at one site. It will show up in our water, our air, and our quality of life. We stand with the Tonawanda Seneca Nation in opposition to the STAMP data center.

Sincerely,

Mary Lupien
Councilmember, East District

Stanley Martin
Councilmember, At-Large

Although I live in Brooklyn, I'm from Buffalo, and I also work in tech, so I know how little care these massive data centers take with their water and energy usage. New York State should not allow these super centers to be built, they shouldn't be given any sort of tax breaks or subsidies when they contribute so little to the communities they're built in, and they DEFINITELY shouldn't be built to impinge on the water and air quality of an indigenous nation.

Sincerely,

Rachel King

What color is water? Blue? No, it's clear until there are minerals or compounds in it. More complex than a simple one-word answer.

Humans create jobs through creativity, ingenuity, solving problems, and being of service to other people that need what you have.
AI takes creativity and ingenuity away – stealing the very thing we have claimed sets us apart from animals – Intelligence.
How many lies can you continue to spread about the need for AI and still think the SIMPLE LIE justifies the complex destruction it ensures?
Do not support this monstrosity of the proposed data center. NOR ANY OTHER DEVELOPMENT ON THE STAMP SITE that is sure to pollute our air and water, destroy important ecosystems for wildlife and permanently denigrate our lives in the surrounding area. The upfront benefits of UNION jobs to build a facility do NOT justify the means of long-term devastation.
Let this be another Bass Pro – a proposal that dies in the idea phase. Instead of a Bass Pro in the Buffalo Outer Harbor, we now have trails, undisturbed wild land, playgrounds for children, and a new water front music venue. Something for everyone.
If AI is so F*ing smart, and the answer to all our most complex challenges, then use it to design its very own small, eco-respectful and eco-resilient storage facility.
My name is Abby, I am a resident of Buffalo, and I oppose the data center proposal at the STAMP site (and any future data centers). I encourage local law makers and all involved to rethink how our economy can be supported by companies in line with nature, not ones that exploit it.

Sincerely,

Abby Spindelman

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I am not against the STAMP project, this area could use more jobs and income. I'm a mechanical / aerospace engineer myself and have been closely following the STAMP project as a potential future employment opportunity. However, I am vehemently against a data center, especially one that is simply for generative Ai. As an registered conservative I am totally against this data center, it's tax breaks, the impact on the environment, and the mystery company behind it. Listen to your constituents, we elected you to represent us and will support you if you honor that, even if it means egg on our faces.

Sincerely,

Dale Kawa

The policies being pursued to develop this data center represent fundamentally extractivist and exploitative policy. Endeavors that actively threaten a safer more livable world through the cost in regional health and resources. It is anathema to the tenants of NY's Climate Law, and to the goals of any equitable society.

Sincerely,

Mazina Brown

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Nobody wants these data centers. We want clean, abundant water in our water tables and we want affordable electricity. We don't want to gamble our tax dollars on a precarious (at best) innovation that will likely be obsolete in a few years, leaving behind a monstrous eyesore in the community and damaged ecosystems.

Sincerely,

Natalie McMahon

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Charli Debose

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

To: streampublichearing@gcedc.com; Press.RSVP@exec.ny.gov; Hope.Knight@esd.ny.gov
Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

LEAVE OUR GREEN SPACES GREEN!!!!

Sincerely,

Kamryn Hartranft

I am currently an electrical apprentice in the I.B.E.W Local 41. This issue was brought to my attention when my local handed out a paper to urge this project to go through. I am beyond disappointed I am in this position. This would benefit my work directly. This issue is much larger than my work. Say no to data centers.

Sincerely,

Zachary Herkey

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

- Genesee County faces a severe and ongoing insufficiency of both water and water infrastructure. The County has long struggled to adequately finance its Water Supply Project, which would bring up to 8 MGD daily of much needed water from Lake Ontario into the County via an agreement and infrastructural tie-ins with the Monroe County Water Authority
- Now, GCEDC is trying to leverage this vulnerability by hinging the financing of Phase 3 of this project on fees paid into the infrastructure project by STREAM

- Read this letter to the editor for more background
- GCEDC must not add additional vulnerability to Genesee County residents' and farms' access to adequate, safe drinking water by hinging critical financing for infrastructural upgrades on STREAM and Apollo: who don't care about the interests of Genesee County

The Rochester Regional Transportation Authority would lose out on $6.2 million in taxes from the requested tax abatements

Sincerely,

Ashley Conklin

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I strongly oppose the construction of this data center. First, giving the company 1.5 billion dollars in tax subsidies is fiscally irresponsible to us, the taxpayers. Secondly, this center is a misuse of land that affects the quality of life of all those residing in that area, especially the Seneca Nation who deserve to keep and use their land as they wish. The US government has a history of theft, mistreatment, and broken promises with our Indigenous nations and this needs to cease. Lastly, a public hearing needs to be held after a full, independent study is conducted on the environmental and economic impacts this center

would have on the communities surrounding it. We the people expect our representatives to serve us, not corporations.

Sincerely,

Zoi Christanis

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

kathy evans

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I vehemently oppose the construction of this or any data center. I also oppose using public funds and subsidies for ventures that have destructive environmental impacts.

Sincerely,

Michael Occhino

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Gov Hochul: No more handouts for big data/big power companies!

Sincerely,

Terry Marx

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Jenny McAneney

Alabama is know for its wildlife refuge. Why would anyone want to build such a site and remove all these living creatures from their habitat???

This land should remain as it is. We do NOT need any DATA centers in our area. It will negatively impact the people and wildlife that live here, and the future of our children and grandchildren.

Sincerely,

Sherry Webster

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

We do not need a data center that will use our water and electricity and expect the tax payers to foot the bill. Our energy bills are high enough. We do not need to supplement a data center. This data center is a detriment to Western New York.

Sincerely,

MaryJane Snider

To the Genesee County Economic Development Center,

I am writing to strongly oppose the proposed $1.46 billion data center complex at the STAMP site in Alabama, NY, by STREAM US Data Centers and Apollo Global Management.

This project threatens:

• The quality of life and well-being of local communities

• The sovereignty and way of life of the Tonawanda Seneca Nation

• Environmental and social health across New York State and the Great Lakes Bioregion

• All New Yorkers through increased electricity rates and air pollution burdens

Sincerely,

NL Step
