4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Douglas Hill

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

With federal restrictions on emissions deemed "flexible" for data centers, and the EPA administrator now rescinding the EPA's scientifically-backed findings that greenhouse gases are harmful, I hope the GCEDC takes extra consideration into how this data center's emissions could impact the community. The rapid acceleration of AI and lack of transparency of tech companies' resource usage leaves us in the

dark as to the full ramifications of data center emissions and water use. Please do not sacrifice public health for economic interest.

Sincerely,

Fox Warren

On behalf of the WNY Peace Center's many members and followers, we urge the GCEDC to reject the proposed data center. Not only are they a terrible blight on the environment in any location, but the STAMP site is truly the worst possible location, next to the Tonawanda Seneca, as well as by a wildlife

sanctuary. There is no reason to approve this abomination. It is even worse than the previously approved data center proposal.

PLEASE do not approve Stream US's proposal for a totally invasive, damaging data center. Do what's best for all the community and reject the proposal!!

Sincerely,

streampublichearing@gcedc.com

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Maureen Nowicki

Sent: Tuesday, April 14, 2026 3:12 PM
To: streampublichearing@gcedc.com
Subject: STAMP Data Center Public Comment

To the Genesee County Economic Development Center (GCEDC):

My name is Mina Aguilar, Director of Advocacy and Campaigns at Workers' Center of Central New York. The Workers' Center of Central New York is a grassroots, member-based organization focused on workplace and economic justice based in Syracuse, New York, where it organizes low-wage, predominantly immigrant/indigenous workers throughout Central New York and into the North Country. .

We submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

Our organization is committed to the just implementation of the Climate Leadership and Community Protection Act. The proposed data center lies within a Disadvantaged Community, as designated by the Climate Justice Working Group, which subjects this project to review under the CLCPA. Per Section 7(3) of the law, in considering and issuing permits, licenses, and other administrative approvals and decisions, all state agencies, offices, authorities, and divisions shall not disproportionately burden Disadvantaged Communities. Given the threats posed by this project to the Tonawanda Seneca Nation which lies within this Disadvantaged Community, and our overarching respect for Indigenous sovereignty, we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of NYS Department of Environmental Conservations' recommendations with respect to the SEQR environmental review process, and call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts;

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public; and

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation. It also threatens our Climate Law and violates the sovereignty and way of life of the Tonawanda Seneca Nation.

In closing: we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of DEC's recommendations with respect to the SEQR environmental review process, and call on GCEDC to reject the incentives application from STREAM US Data Centers.

Sincerely,

Mina Aguilar, she/her/ella

Our future does not depend on AI. Our future relies in sustainability, for all. Where the stamp project is located alone is a major problem. There are multiple wildlife managements as well as the native reservation. We need to stop damaging the land that sustains our life and well being. We need to protect this land. Even more so because it is the IINDEGENOUS PEOPLES land. Not to mention, the placement of the project doesn't even fall within the bounds of where it was supposed to be and got approved for.

There are many things wrong with this, and I will not stand for it. We cannot allow ourselves to become so narrow sighted, greedy, and selfish that it leads to the destruction of our own kind. Earth will survive without us. But we cannot survive without her. Do the right thing and put an end to this nonsense

Sincerely,

Fiona Baldwin

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Please don't let this project go through. As a former Genesee Co resident and whose family still lives and owns land there, I am not in favor. And as a Monroe Co resident now, it is not acceptable that the project should be relying on Monroe Co Water resources.

Sincerely,

streampublichearing@gcedc.com

Hello, I am writing on behalf of me, my coworkers, my friends, and most of my family.

The data center being proposed to be built next to the Tonowanda Seneca region is a great concern to the sovereignty and safety of these people, it will directly impact their fields, water, air, and electricity. Not to

mention noise pollution. As for the rest of western ny, ALL of us will benefit more from clean water, clean air, clean food, and clean environment, rather than a few people benefitting from a stable job. There are so many other things we can put this money towards to help create stable jobs, and another data center that no one here is agreeing to is not one of them. Please reconsider and thank you

Sincerely,

Connor Kwiatkowski

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

As a younger person aged 25, I believe that New York State would not be missing out if this project is cancelled. We do not need Generative AI in a future that would be sustainable for my children and further descendants. The sheer amount of water it uses can never be justified, and

we must protect indigenous communities and land because they know firsthand how to live in harmony with the Earth. We as humans were fine without generative AI for hundreds of thousands of years- a data center now is just a pointless usage of resources, pointless pollution, and a pointless energy price hike. We live in such a sensitive time right now as resources begin to run out as the planet heats up, with unprecedented consequences. We won't even be around to enjoy the so-called "fruits" of generative AI if we can't get food, water, or clean air due to the very data centers ruining the natural environment. Stop wasting energy on AI! New Yorkers and Indigenous communities deserve better! Instead of generating data centers we should REgenerate our planet and only home.

Sincerely,

Kaitlyn Quach

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

While upstate NY does have adequate water, I am very concerned that this facility is being built without adequate environmental impact studies. In addition, it seems unreasonable for companies investing in data centers for AI to be able to externalize many of the environmental and social costs while also getting a tax subsidy! While some jobs would be anticipated, especially during the construction phase, possible higher power rates, noise pollution, and possibly groundwater pollution would influence residents far more. And it seems especially unfair to put this near the Native lands, after their expressed opposition.

Sincerely,

Katherine Schaefer

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

streampublichearing@gcedc.com

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

This project is a BAD investment. GCEDC would lose out on $716 million in sales taxes. So would NYS. I dont want my electricity to raise higher then it already is and I don't want my environment to be destroyed by this data center. Huge data centers are not good for the area and cost of living for anyone. You are also destroying Native lands. How dare you even consider this.

Sincerely,

Jessica Skorich

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

While I am in agreement with all the environmental reasons for not placing a data center in the Town of Alabama, I am REALLY against this project due to the massive subsidy that this county is supposed to give a billion dollar corporation. Billionaires and their companies are the "predator class," using the majority of Americans to further enrich themselves with low-paying jobs and little tax support of any kind. Let's recognize this for the grift it is. The promise of millions is just not enough. Let's stop this here.

Sincerely,

Leslie DeLooze

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

.

Sincerely,

Laura Whitebell

These data centers benefit no one besides the corporations themselves and the minority who reap the benefits of their success. People deserve clean water, affordable electric bills, access to RAM, and the agency to dictate their future.

Sincerely,

Austin Miller

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Big data centers are ecological disasters to be kept out of the rural areas of Genesee & Orleans counties. Lake Ontario is not there to be seasoned by greedy computer nerds who likely have little to no concern for the environment or respect for the Tonawanda Seneca Nation.

Sincerely,

Judy Breed

It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

With as much money as they are investing and raking in from the stock market, they can afford to pay full tax for these data centers.

Sincerely,

Thomas Annear

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

STAMP will not only jeopardize the Genesee county area but all points north where it's waste water will overwhelm the Oak Orchard River. We don't need or want that kind of environmental disaster for the greed of one company and community.

Sincerely,

Wendi V. Pencille

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

We do not want our region further compromised by the horrendous economic and ecological impacts of this project. We already know what happens to communities with these monstrous resource hogs, run by selfish money-grubbing entities and polluters of the worst kind. Asking for taxpayer subsidies or a single cent from this state, region, or any concerned entity or individual for such projects is beyond ludicrous.

This project will increase the cost of living in this region in myriad ways, damage our environment, and disgracefully damage quality of life for all except, perhaps, the wealthiest. Yet you expect average hard-working citizens to pay for a business that should foot its own bills. Don't tell us about the positives., ans nothing is worth what you're really planning to do. We anre not fools. You have not done your due diligence, nor have you presented the entire set of facts surrounding this project. Hiding the truth doesn't work. There is no rationale for this project. All we see are increasing levels of corruption, greed, cronyism, abuse of power, and the audacity to want to do your worst. You seem driven by your will to unjustly enrich powerful individuals and dangerous concerns that do not pay their fair share in any way.

There is so little upside to this project and others like it that it's laughable you would think we would agree. Go back to the drawing board. Study what other countries such as Sweden do about data centers and other tech infrastructure. They don't rob or endanger their citizenry while pretending to do good.. Come up with a detailed plan based on facts. We demand full due poster and complete honesty. Develop a viable plan for the long term. Only then should we discuss your ideas for economic policy. You have a duty to serve this region and protect us from harm while safeguarding he environment. You must also protect and strengthen our fragile economy without being influenced by outside interests.

Sincerely,

Mara Black-Michaels

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

We do not need data centers!!!!!

Sincerely,

Jeffrey Bartley

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

My Comment: They want taxpayer subsidies for a complex that will strain our electric grid, disturb our environment and water quality, potentially be a noise polluter for those living nearby, and for what? To support AI and corporate data which is wreaking havoc with people's job prospects and lives. No way should we consider this in New York State unless and until there is concrete state and federal regulation to mitigate any damages. No way should taxpayers be on the hook for funding such a complex. No way should such a development infringe upon the Seneca Nation. No way should this be forced upon the people of WNY.

Sincerely,

June Shales

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I was outraged to learn that GCEDC has uploaded a new revision of the SEQR application and supporting documents to the GCEDC website sometime between April 7 and April 8.

I demand that GCEDC further extend the date of the deadline for written comments, and re-set the date of the supplemental hearing for a time when it is reasonable to expect that those who would be most impacted by the data center complex have had a chance to review and produce meaningful comment on the new materials.

You must show greater respect for public participation in this review process. The stakes of this proposed project - in terms of impacts to our environment, public health, economic well-being, and quality of life - are simply too high.

Sincerely,

Mandy Hahn

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Michael Creighton

Stop this data center. The site is inappropriate - sited next to a small tribal community. It is racist action to put something so massive in size. The amount of energy needed to power the AI plant would create a constant electricity "buzz" causing harm to the people living there. People from reservations don't just move away. It is their home forever.

Sincerely,

Maria Maybee

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Emily Beeley

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I was outraged to learn that GCEDC has uploaded a new revision of the SEQR application and supporting documents to the GCEDC website sometime between April 7 and April 8.

I demand that GCEDC further extend the date of the deadline for written comments, and re-set the date of the supplemental hearing for a time when it is reasonable to expect that those who would be most impacted by the data center complex have had a chance to review and produce meaningful comment on the new materials.

You must show greater respect for public participation in this review process. The stakes of this proposed project - in terms of impacts to our environment, public health, economic well-being, and quality of life - are simply too high.

Sincerely,

Justin Philipps

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

My name is Laura Asci and the following is for public record: as a New York State citizen, I DO NOT SUPPORT the construction of a data center anywhere in New York, and certainly not in or near the town of Alabama. The evidence of destruction and resource consumption caused by data centers is clear and the people of New York will not support the building of a data center which will destroy the environment and the lives around it.

Sent: Monday, April 13, 2026 8:13 PM
To: streampublichearing@gcedc.com
Subject: STAMP PROJECT

To the Genesee County Economic Development Center (GCEDC):

My name is Philip Rose (Steering Committee of the United Climate Action Network (UCAN]). We have been advocating for environmentally friendly policies, organizations, and businesses throughout Madison County for nearly 10 years. We are concerned about our neighbors to the west whose lands are being overdeveloped and jeopardizing the environment and the native culture adjacent to the proposed STAMP project which we are opposed to.

We submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

Our organization is committed to the just implementation of the Climate Leadership and Community Protection Act. The proposed data center lies within a Disadvantaged Community, as designated by the Climate Justice Working Group, which subjects this project to review under the CLCPA. Per Section 7(3) of the law, in considering and issuing permits, licenses, and other administrative approvals and decisions, all state agencies, offices, authorities, and divisions shall not disproportionately burden Disadvantaged Communities. Given the threats posed by this project to the Tonawanda Seneca Nation which lies within this Disadvantaged Community, and our overarching respect for Indigenous sovereignty, we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of NYS Department of Environmental Conservations' recommendations with respect to the SEQR environmental review process, and call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts;

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public; and

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation. It also threatens our Climate Law and violates the sovereignty and way of life of the Tonawanda Seneca Nation.

In closing: we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of DEC's recommendations with respect to the SEQR environmental review process, and call on GCEDC to reject the incentives application from STREAM US Data Centers.

Sincerely,

Philip Rose

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

This project is a BAD investment for Genesee County, the GLOW Region, WNY, or NYS. GCEDC would lose out on $716 million in sales taxes.

The data center complex would have a high direct and indirect cost. The requested subsidies would be among the largest ever awarded to an economic development project in NYS, and among the largest subsidy packages ever awarded to a data center project anywhere in the US.
It only creates 125 jobs, many of which can be done by remote or temp workers, which isn't going to help the region.

SAY NO to the Proposed STAMP Monster Data Center! Protect Our Woods, Our Waters, Our Way of Life, and Our Cost of Living.

Sincerely,

Nik Delgado

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Data centers do not bring jobs. They strain electrical grids, pollute the air, cause noise and make the surrounding area worse to be in. The proposed STAMP data center complex is even worse than many of the hundreds of data centers being foisted on low-income neighborhoods across our country in that it will be affecting pristine forest and violating the sovereignty of the Tonawanda Seneca Nation. People are standing up to data centers around the USA. Lawmakers who understand that their job is to protect their constituents and see beyond flashy offers of money from corporate interests who just want to use and then abandon our communities are standing up and passing laws to ban data centers. That is what we

should be working on. No to data centers, no to risking ecosystems that clean our air and water, and support life.

Sincerely,

Maria Evans

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Arlene Reese

This is not what our state needs. We need to invest in our land and its stewards above all else, not toxic data leeches that will raise energy costs. Data and profit should not come at the cost of everything else.

Sincerely,

Hell no! They want taxpayer subsidies for a complex that will strain our electric grid, disturb our environment and water quality, potentially be a noise polluter for those living nearby, and for what? To support AI and corporate data which is wreaking havoc with people's job prospects and lives. No way should we consider this in New York State unless and until there is concrete state and federal regulation to mitigate any damages. No way should taxpayers be on the hook for funding such a complex. No way should such a development infringe upon the Seneca Nation. No way should this be forced upon the people of WNY.

Sincerely,

Jan Conradi

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Laura Brown

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

This data center violates the sovereignty of the Tonawanda Seneca Nation.

There should ZERO subsidies given to a Data Center. project These companies are awash in venture capital.

The environmental impact of a large data center will be a disaster for the local ecosphere. An economic disaster fund must be established by the requesting firm as insurance for the inevitable environmental disaster if this project were approved.

Sincerely,

Wendy Hembrock

I have friends who live in this area in Genessee County and they work hard to feed their families and grow food. At this time of economic challenges, it is unconscionable to request a sales tax abatement. STREAM has requested a local sales tax abatement and mortgage recording tax abatement, which - taken together - are worth 25 times more than the benefits provided by the proposed PILOT/Host payments. In other words: STREAM has requested tax abatements worth 25 times more than the promised benefits.

Sincerely,

Sally Zelasko

These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Kalmia Strong

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Western NYers do NOT want this data center and know it is not in our best interests. Corporations will benefit, and citizens will lose. We know because we've seen the same scenario play out across the country dozens of times already.

Sincerely,

Cara Anne Kulwicki

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I was outraged to learn that GCEDC has uploaded a new revision of the SEQR application and supporting documents to the GCEDC website sometime between April 7 and April 8.

I demand that GCEDC further extend the date of the deadline for written comments, and re-set the date of the supplemental hearing for a time when it is reasonable to expect that those who would be most impacted by the data center complex have had a chance to review and produce meaningful comment on the new materials.

You must show greater respect for public participation in this review process. The stakes of this proposed project - in terms of impacts to our environment, public health, economic well-being, and quality of life - are simply too high.

Sincerely,

Cara Anne Kulwicki

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

This data center would displace farmers and skyrocket electricity bills. I haven't lived here long but I'd like to stay as long as I can afford it. I think building a community that trusts each other and its law makers is crucial.

Sincerely,

Caroline Rooney

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Us citizens have had water, electrical and gas hikes. Food also cost more than before. In a span of 5 years cost of living has gone up about 50% and adding a data center will only bring up the cost of electricity and water(required to cool servers). Not only that but ai has not had impacted society in any tangle positive way. I have a masters in computer science with a focus in machine learning and artificial intelligence btw.

Sincerely,

christopher concepcion

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Grant McKeown

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

I have just recently heard about the massive data center. I will be attending the meeting on this issue & I am adamantly opposed to this data center. It is too big & it will be detrimental to our area & our way of life in wny. And I have a lot of questions for the board &the firm who is planning this.

Sincerely,

Debbie Leising

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I was outraged to learn that GCEDC has uploaded a new revision of the SEQR application and supporting documents to the GCEDC website sometime between April 7 and April 8.

I demand that GCEDC further extend the date of the deadline for written comments, and re-set the date of the supplemental hearing for a time when it is reasonable to expect that those who would be most impacted by the data center complex have had a chance to review and produce meaningful comment on the new materials.

You must show greater respect for public participation in this review process. The stakes of this proposed project - in terms of impacts to our environment, public health, economic well-being, and quality of life - are simply too high.

Sincerely,

Hugh T. KELEHER

Data centers harm nearby communities by drawing heavily on water supply, driving up electricity costs, producing heat and noise pollution, and in many cases causing carbon emissions that worsen the

climate crisis we are already struggling to stop. Big Tech likes to claim that data center construction will create jobs, but the few jobs it does create are temporary and in no way worth the costs to communities.

Sincerely,

Bennett Attaway

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Please stop the billionaire pushers of AI from destroying our local environment!

Sincerely,

Holly Watkins

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Todd Feldmann

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Thomas Hynes

I see that several states are putting a moratorium on data centers to study the full impact it will have on the environment and the neighboring community. Please pause this as we are talking about virgin land. I see that Tonowanda Coke plant is going is in the works for a data center. I believe this is better suited site. Can't we relocate the data center to already used and failed sites? Lets repurpose rather than take more precious land.

“I reserve the right to submit further comments on the April 6 revised SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project’s impacts. Thank you in advance for this condsideration.
Gaye Drock

Sincerely,

Gaye Drock

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I was outraged to learn that GCEDC has uploaded a new revision of the SEQR application and supporting documents to the GCEDC website sometime between April 7 and April 8.

I demand that GCEDC further extend the date of the deadline for written comments, and re-set the date of the supplemental hearing for a time when it is reasonable to expect that those who would be most impacted by the data center complex have had a chance to review and produce meaningful comment on the new materials.

You must show greater respect for public participation in this review process. The stakes of this proposed project - in terms of impacts to our environment, public health, economic well-being, and quality of life - are simply too high.

A massive data center complex is wrong on so many levels. The entities benefitting will be GCEDC, STREAM USA Data Centers, and Apollo Global Management, with billions of tax payers dollars making billionaire companies even richer. When AI bubble bursts, the community will be left holding the bag, with a project that STREAM and Apollo walk away from. GCDEC will distance themselves from this fiasco .

Sincerely,

Patricia Smith

Subject: Alabama NY Data Center

The fact that anybody would even consider building a data center so close to one of the most beautiful wildlife reserves in the state is completely disgusting. If this sees completion, land that could be used for homes is going to be turned into a facility that poisons nearby water and uses a city's worth of power to fuel a technology with the primary use case of lying to you and showing you things that never happened. The construction of this facility is antinature, antihuman, and antilife.

This data center is a massive project that would use 500 MW of power and require large amounts of water to operate. The size of the project would impact neighboring water drainage and air quality. Plans for disposal of contaminated waste water and solid waste are non-existent. Apollo Global Management has a long list of corporate violations and the company that would eventually use the data center is protected by a non-disclosure agreement. This project would cost the community in terms of the

environment and the cost of utilities. Therefore, urge you to require a full environmental review and have public hearings after the review is published.

Sincerely,

streampublichearing@gcedc.com

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

There is not enough data on the impacts of these data centers to be going ahead with them at this rate.

Sincerely,

Beth Tario

I'll keep this quick and brief. AI data centers are a pariah to the communities they exist in. They dramatically increase energy costs and water costs and can cause air pollution because they often get powered by peaker plants and other dirty fossil fuel burning power plants, that wouldn't be operating if

the data centers weren't running. We don't want them in our community, and CERTAINLY don't want a tax credit for them. The AI companies are selling a product, they should fund themselves. It is unconscionable to imagine that we'd be forced to pay taxes to bring this disruptive force into our community, so please reject these tax abatements.

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed — the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

Subject: Data center in Alabama, NY

I'm writing to state my opposition to the data center that is planned to be constructed in Alabama, NY. These data centers are incredibly detrimental to the environments around them and being someone that loves Western New York's beauty I believe building such centers in our home is short sighted and wrong.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

This data center not only obstructs the way of life of the local communities including the sovereignty of the Tonawanda Seneca Nation with consideration of land and noise pollution, but has serious environmental concerns that are not being taken seriously. 20,000 gallons of water per day (which is an insanely low estimate) is a disgusting waste of water and energy supply in NYS. NYS is mandated to reduce greenhouse gases and preserve land, and this project is in direct opposition of that. It would effect all of NYS and surrounding areas, and would cause everyone's energy taxes to go up, which are

already at record high levels.
Please do not pass this data center and ruin a wonderful community.

Sincerely,

Drew Consorti

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Michael Kerr

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

The proposed building of a massive data center in Alabama, NY is unconscionable and will negatively impact those who live in town and across the region. As other communities across this country have demonstrated in their own fights against the construction of similar data centers, the complex proposed by STREAM US Data Centers will harm the local economy, environment, and the sovereign Tonawanda Seneca Nation. We cannot allow billionaires with their selfish agendas to run our lives in the state of New York. I firmly oppose this proposed data center complex and the financial incentives request submitted by STREAM US Data Centers.

Sincerely,

Katherine Soules

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

I oppose the STREAM Data Center at the STAMP location for the following reasons:

1) The money offered by GCEDC and NYS as tax abatements are 25 times greater than the PILOT/CBA that has been been proposed by STREAM. (This is a bad deal for tax payers and electricity rate payers.)

2) The noise and air pollution will greatly disturb the community, as well as the animal and plant life of the surrounding areas.

3) Siting this data center adjacent to the Tonawanda Seneca Nation threatens their way of life, especially because of the noise, air and possible water pollution. (The indigenous people of NYS have had to fight to maintain small amounts of land in order to continue their traditional way of life. Now we are impinging on those communities again!)

4) The GCEDC and Genesee County need to find another way to fund the needed water and sewer infrastructure they need and stop relying on PILOTS from industries.

Sincerely,

streampublichearing@gcedc.com

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I was outraged to learn that GCEDC has uploaded a new revision of the SEQR application and supporting documents to the GCEDC website sometime between April 7 and April 8.

I demand that GCEDC further extend the date of the deadline for written comments, and re-set the date of the supplemental hearing for a time when it is reasonable to expect that those who would be most impacted by the data center complex have had a chance to review and produce meaningful comment on the new materials.

You must show greater respect for public participation in this review process. The stakes of this proposed project - in terms of impacts to our environment, public health, economic well-being, and quality of life - are simply too high.

Sincerely,

Allen Blair

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I was outraged to learn that GCEDC has uploaded a new revision of the SEQR application and supporting documents to the GCEDC website sometime between April 7 and April 8.

I demand that GCEDC further extend the date of the deadline for written comments, and re-set the date of the supplemental hearing for a time when it is reasonable to expect that those who would be most impacted by the data center complex have had a chance to review and produce meaningful comment on the new materials.

You must show greater respect for public participation in this review process. The stakes of this proposed project - in terms of impacts to our environment, public health, economic well-being, and quality of life - are simply too high.

WNY says NO to Data Centers. Stop polluting, stop the cash grab and exploiting our natural resources.

Sincerely,

Julie Gee

Subject: WE OPPOSE STREAM DATA CENTER

Everyone who lives in Genesee County is extremely blessed to have access to fresh water as we continuously enter the hottest seasons ever recorded. For a planet skyrocketing towards extreme heat, access to fresh water is one of the most valuable things we can have. The data center will bleed our fresh water dry. It is estimated that data centers consume 5 million gallons of water *daily*. We are in big trouble if this data center goes up. There will be no going back. We urge you to block the construction of this before it's too late. We do not want data centers in our backyards.

Claire Donovan

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

It should not be built. It is not worth the harm that will be coming to the government protected wet lands in that area. Along with the tax breaks. That comes back on the tax payers of Genesee County.

Sincerely,

Jeffrey Leonard Wawrzyniak

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: NO to Genesee County Data Center

Good day,

I am a resident of Western NY State for twenty years. I am very strongly opposed to the proposed building of a data center in Genesee County.

Data centers do not generate jobs. Data centers drive up utility costs for working New Yorkers who are already economically pinched. Data centers have a tremendously negative impact on our shared natural environment. Furthermore, the data center proposed for Alabama, NY, in Genessee County, poses an existential threat to the important Iroquois Nature Preserve.

New York must find ways to strengthen its economy and improve the lives of its ordinary citizens, without recklessly sacrificing precious, limited natural resources in the name of unproven technologies.

Sincerely,
Jason Duval

Hello,
I have been a Western NY State resident for 50 years and severely oppose building a data center in Genesee County NY.
There should be no tax breaks to corporations that are building tech to displace jobs and increase the utility costs for NYS residents, as well negatively impacting the environment around the Iroquois Nature Preserve and Tonawanda Seneca Nation.
Improving our economy shouldn't come at the cost of our local environment nature and local citizens carrying corporate expenses for tech that has unproven social benefit.

Thank you.

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

To the Genesee County Economic Development Center (GCEDC):

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Larry Hauser

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Please know that I speak for a healthy environment that is essential to everyone's well-being, for the health of all creatures in the area of the proposed data center complex, for a healthy future for us all.

Sincerely,

streampublichearing@gcedc.com

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

NYS would lose out on $716 million in sales taxes from this deal (in addition to $716 million in losses for Genesee County alone).

This project will destroy water, land, air, quality, and further tread on the native way of life. More AI servers will come in soon, New York State will be unlivable for its people.

Have billionaires taken enough enough from us?

Please do not let this AI Center into New York State.

Sincerely,

Sue Garbin

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

streampublichearing@gcedc.com

Subject: Public Comment Opposing STREAM U.S. Data Centers Project

Dear Members of the Genesee County Economic Development Center,

I am writing to express my strong opposition to the proposed STREAM U.S. Data Centers project in Western New York.

While I understand the desire for economic development and investment in our region, this project raises serious concerns that outweigh its potential benefits. First, the scale of the development—now reportedly approaching $20 billion—would place enormous strain on local infrastructure, including energy, water, and transportation systems. Data centers are highly resource-intensive, and the long-term environmental impacts on our community must be carefully considered.

In particular, the project's anticipated energy consumption could significantly increase demand on the power grid, potentially leading to higher utility costs for residents and increased reliance on non-renewable energy sources. Additionally, large data centers often require substantial water usage for cooling, which may impact local water supplies and ecosystems.

Second, the economic benefits being presented deserve closer scrutiny. While the project includes financial agreements such as PILOT arrangements, these often reduce tax contributions over time. Residents should question whether the promised revenue and job creation will truly offset the long-term costs to the community. Data centers typically create relatively few permanent jobs compared to their size and footprint.

Third, there are concerns about land use and the character of our community. The proposed site and surrounding areas include valuable agricultural land and rural landscapes that are integral to Genesee County's identity. Once developed, these lands cannot be restored to their original condition.

Finally, I urge the GCEDC to prioritize transparency and meaningful public engagement throughout this process. Community members deserve clear, detailed information about the project's impacts and a genuine opportunity to influence the decision.

For these reasons, I respectfully request that you reconsider moving forward with this project and instead explore development opportunities that are more sustainable, community-centered, and aligned with the long-term interests of Genesee County residents.

Thank you for your time and consideration.

Sincerely,
Lisa Herkelmann

Subject: WNYer thoughts on the Stream Data Center

Hello,

I am writing to demand that the data center project be permanently halted at the STAMP industrial park. We don't need more data centers, there is very little which is marketed as A.I. that is even potentially useful for human well-being and flourishing; it's mostly intellectual property theft, cognitive decline-inducing, and abusive slop. The Internet works worse than it did a few years ago, and now I have to field emails written by robots that don't get to the point. Even if the data center isn't for A.I., I don't think people should pay higher energy prices just so streaming services and tech companies can have more profitable and increasingly worse products.

Only one who has spent time in the area surrounding the STAMP industrial park can understand how special it is. That area has some of the best bird diversity in Western New York (where else can one see sandhill cranes?), and is protected for a reason. One of the most accessible hobbies to everyday people is birding, and one of the biggest draws of WNY is its birding spots and communities.

Furthermore, the federal and state governments have a history of stealing and polluting the land on which Native Americans live. I don't want New York State to continue that tradition. The Tonawanda band of the Seneca and the other communities nearby have their livelihoods, health, and happiness threatened by this data center. These people don't deserve a data center for neighbors. If living next to a data center isn't such a big deal, then the leaders of the data center companies and the politicians who support these deals should be forced to live next door to them.

I visit both the Tonawanda Wildlife Management Area and the Iroquois National Wildlife Refuge, and I am so grateful that people were wise enough to protect those lands in the past. Please do not ignore that wisdom: Stop this project permanently.

Sincerely,

Anne Dlugosz

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Cal Trumann

Subject: No to datacenter

Dear Sir or Madam,

We here in Buffalo DO NOT want a data center built and running in Alabama, NY. We do not want our electricity prices to increase in a city that already has some of the highest property taxes in the nation. Power generation is what our region is known for, and we need that power for our people, not industry.

Preserving the nature reserve is of greater value than uncertain technological innovations. Anyone can see that travel is becoming more local with rising fuel costs, labor shortages and federal agencies being overworked. The value of the tourism draw of the nature reserve will prove more reliable financially than the deliberate disruptive speed and risk involved in Big Tech development.

There are plenty of other places in the US better suited for data centers. Don't drive down our property values, discourage the current trend towards population growth in the region or destroy our natural attractions.

Thank you,

Tasha Vest

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: Data Center

Good evening,

I am a concerned citizen living near the Iroquois National Wildlife Refuge and the Tonawanda Seneca Nation. This data center will absolutely wreck Western NY ecologically and environmentally. I do not agree with the use of that land for something that will become obselete in a few short years. That is also ignoring the giant impact this will have on our water and other aspects of daily life. Do not build this center. Do not ruin this part of Western New York for your children and grandchildren just for corporate greed and short term gain. Do better for our citizens and move towards the more impactful things that would actually improve our daily lives.

Dylan Empric

It's not only what STAMP does to the water, to the peace, "the rural way of life."
It's not only what STAMP does to the regional price of energy.
It's not only what STAMP does to the value of our property.
And it's not only what STAMP does for the elite of our oligarchy.
It's also, for me, what's kept at mega industrial sites like STAMP,

PR teams can swap out new language all they want, but STAMP houses data centers,
Which means we're giving companies like GCEDC gigantic tax breaks to warehouse what?

Nothing short of weaponry.

The data housed in places like this feeds the AI programs that fire autonomous weapons and surveil the entirety of online society. It's disgusting to think our priority in western New York is making space for the garabge of the internet that the ruling class holds the working class down with, selling all of our memories, fears, tastes, time, and attention back to us. The internet is a broken place, and the construction of these centers ensures there will always be a profit motive for keeping people online, living primarily online, being increasingly fragmented from their society and neighbors.

This movement is about the power of the working class to gather as neighbors to say: this is not what land is for. This is not what earth is for.

Build a hospital, a housing complex, and a big park at the site known as STAMP. That's investing in the working class.

-Tyler (Hamlin)

Subject: No data centers in WNY

There are so many reasons why we shouldn't be funding these places with tax payer money. Among the most important to me is protecting the environment and keeping our limited wildlife refuges free from human impact.

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I do NOT approve of using our tax dollars and our water for this expensive project. Our higher priority is to protect water, air, and quality of life.

Sincerely,

Christine Farnum

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

We have a small flower farm close to the Tonawanda Reservation, where we are currently building our home. We STRONGLY OPPOSE any data center being built near us.

These data centers provide NO BENEFIT to the local community, and do irreparable damage. Minor “benefits” like a short term pay out to contractors to build the company, or a handful of security jobs are completely dwarfed by the harm and destruction.

We advocate and donate heavily to causes we care about, and we will are committed to maxing out our donations to support anyone opposing any person who votes in favor of this data center. We will continue to donate against them until they are out of office, every election, however long it takes.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

I urge you to vote against this data warehouse having spent 30 trips to visit there from the State of Florida. I've spent tens of thousands of dollars in the local economy because of your natural resources.

Sincerely,

Lee Pickerill

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Astrid Hoffius

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I was outraged to learn that GCEDC has uploaded a new revision of the SEQR application and supporting documents to the GCEDC website sometime between April 7 and April 8.

I demand that GCEDC further extend the date of the deadline for written comments, and re-set the date of the supplemental hearing for a time when it is reasonable to expect that those who would be most impacted by the data center complex have had a chance to review and produce meaningful comment on the new materials.

You must show greater respect for public participation in this review process. The stakes of this proposed project - in terms of impacts to our environment, public health, economic well-being, and quality of life - are simply too high.

My vision for the STAMP campus is for it to be covered with a solar/plus storage installation. Agrivoltaics could make it productive, the land would remain pristine, there would be economic benefits and there would be no harm to the refuge or the Tonawanda Seneca Nation. What would make more sense? A mega data center has no place in this ecologically sensitive and important place.

Sincerely,

Sara Schultz

After a lot of review reading about data centers across the country, I have yet to find any that are not destructive to their neighbors. Environmental damage, increased utility costs, air, water, noise pollution are among the results that accompany data center development.

This center project brings only destruction to our rural county..

Sincerely,

streampublichearing@gcedc.com

The unbridled excitement over new advancements in technology has stopped many from asking "at what cost?" for fear of being labeled as anti-tech or backward in their thinking. What is at stake is far too precious for our leaders to not stand up and ensure full evaluation and proper regulation. It is a disappointment that progressive leaders have gone from assessing serious measures for how to mitigate the climate crisis and protect our environment to turning a blind eye to this serious hazard that

jeopardizes it all. Please stand up for what is right, show courage, and push back against the creation of these data center complexes that threaten not only local communities but the health and survival of humankind at large. This is not an overstatement.

Sincerely,

Kristin Roth

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

These data centers are driving up costs for electricity, they are using so much water, putting out so much heat, and are generally devastating our climate and our communities. PLEASE do what is best for the majority of the citizens you represent, not just the wealthy few pushing for these devastating data centers. Please keep us safe by saying no to yet another drain on taxpayers that will only benefit the already wealthy few. I have faith you will do the moral thing and support the majority of those you serve. We will be eternally grateful for the support you've given our children by investing in our collective futures.

Sincerely,

Rachel Rosen Simpson

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

This proposal does NOT make environmental or economic sense. Giving such a huge subsidy to an AI data center not only will result in NYS losing out on $716 million in sales tax, but it represents a gross investment in an industry that will likely see an economic crash or burst bubble. There are so many more important issues to push funding towards than a facility that will use as much electricity as 410,000 homes and 20,000 gallons of water daily. We are at the precipice of climate fallout, and investing in a data center that does NOT provide an essential resource but INSTEAD will burn 114,000 gallons of diesel

fuel annually…all to support only 125 jobs (while threatening essential resources for everyone), is unbelievably irresponsible and inhumane.

Sincerely,

Erin Zipman

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

NO to the STAMP data center!

Sincerely,

Mary Hammele

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

If built, this data center is likely to raise local utility rates drastically, making normal use of electricity unaffordable to working people. That's what has happened to the poor folks of West Virginia. Let's not do that to ourselves here in New York State.

Sincerely,

Naomi E Nemtzow

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Regina Anderson

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

This is a threat to our community and environment. Saving water through a closed loop system is a myth. We are putting our natural resources at risk.

Sincerely,

Liz Tinelli

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I strongly oppose this data center! It doesn't create more jobs, it just takes up natural resources and space. What could we do with the money in subsidies that the state has to give to prop this horrible project up? How many mouths could we feed, how much healthcare could we give to people in need. This project needs to stop.

Sincerely,

Mark reisch

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

This is shameful. No data centers on indigenous land. No data centers in NY! Stop this madness before we all cook.

Sincerely,

streampublichearing@gcedc.com

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I was outraged to learn that GCEDC has uploaded a new revision of the SEQR application and supporting documents to the GCEDC website sometime between April 7 and April 8.

I demand that GCEDC further extend the date of the deadline for written comments, and re-set the date of the supplemental hearing for a time when it is reasonable to expect that those who would be most impacted by the data center complex have had a chance to review and produce meaningful comment on the new materials.

You must show greater respect for public participation in this review process. The stakes of this proposed project - in terms of impacts to our environment, public health, economic well-being, and quality of life - are simply too high.

Sincerely,

Sophia Alkhouri

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Galina Tucker

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

My grandmother and mother are from Batavia NY (Pavilion and East Bethany, more specifically.) My grandmother relies on well water, and I know the horrible contaminants associated with data centers like STAMP have on the surrounding areas, particularly to the water cycle.

Growing up, the outdoors has been a major traditional touchstone for my family. We enjoy watching for bats and listening to different owl calls when the seasons allow for it. We enjoy outdoor games and picnica at the variety of parks in the region, including next to and inside of the Tonawanda Reservation.

This project would destroy our precious habitats and wetlands, and in exchange for what? PILOT makes it so STAMP will never pay a cent in taxes, while creating next to no jobs, driving up our energy costs through the rough, and poisoning our water and soil permanently. You may as well inject me with cancer right now by pushing through this bullshit data center.

Sincerely,

Xanthe Plymale

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Alyson Shotz

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I was outraged to learn that GCEDC has uploaded a new revision of the SEQR application and supporting documents to the GCEDC website sometime between April 7 and April 8.

I demand that GCEDC further extend the date of the deadline for written comments, and re-set the date of the supplemental hearing for a time when it is reasonable to expect that those who would be most impacted by the data center complex have had a chance to review and produce meaningful comment on the new materials.

You must show greater respect for public participation in this review process. The stakes of this proposed project - in terms of impacts to our environment, public health, economic well-being, and quality of life - are simply too high.

Sincerely,

Mary Button

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I am very concerned about the impact of the proposed data center. Please seriously consider all of the hidden costs before proceeding.

Sincerely,

Anna Young

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Residents of NY do not want this data center. It will only hurt local communities, and waste precious resources. tax dollars should fund programs that help citizens. Do not build this monstrosity.

Sincerely,

Emma Patterson

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

steve clorfeine

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

This is a HORRIBLE investment, one that will long term ruin our land, our communities, our lives. The measly few jobs provided are NOT worth anything and clearly just serve the idiots who have already dumped all their money into these projects. While they go fuck around in their Arizona luxury compound bolt holes the rest of us and our progeny will be left to face the messes we've made. We are meant to steward our lands not raze them.

Sincerely,

Zoe Bracken

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I am a resident of Delaware County, NY, and yet I feel that the data center complex proposed for construction at the STAMP mega industrial site in Alabama, NY, though several counties from where I live, will still deeply affect me and my community and the population of NY state more broadly, so much so that I feel moved to write a comment in opposition to the request for tax abatements for the proposed data center. The water and power usage of the site, the effects on water quality and wetland habitat, the increased noise and air pollution, all in direct proximity to the Tonawanda Seneca Nation and the nation's Big Woods, will deeply and irrevocably affect the health and wellbeing of the local community

and the members of the nation - all of this for a data center that has absolutely no benefit to the public. I oppose this data center on the principles of environmental justice and Indigenous sovereignty, as well as from basic care and concern for the earth, for our neighbors in Genesee County and in the Tonawanda Seneca Nation, and the threatened and endangered species living in the affected region. In addition to these reasons, I also oppose the data center complex for reasons that directly affect me and my community - the requested tax abatements will siphon off hundreds of millions of NYS revenue that will affect all New Yorkers. The addition of 500 MW to the grid would add strain to an already strained electrical grid in NYS, leading both to more frequent brownouts and blackouts, as well as increased air pollution. These direct effects of the construction of the data center complex at the STAMP site on myself and my community in Delaware County and in NY State, lead me to fervently oppose the environmental application and requested financial incentives of $1.46 billion.

Sincerely,

streampublichearing@gcedc.com

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Pamela Smith

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

streampublichearing@gcedc.com

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

streampublichearing@gcedc.com

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

We DO NOT support the development of this data center. This would drastically negatively impact the lives and wellbeing of people in the surrounding area of this data center, and it is unjust.

Sincerely,

streampublichearing@gcedc.com

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

John Rudroff

data centers are not the answer! They are not going to stimulate the economy to a degree that balances the negative socio-enviro-economic impacts that are created with the expansion of these energy-hogging, ecosystem and health threatening, long-term unemployment ans unaffordability creating ventures. They are hurting New Yorkers and Americans rit large! Please do not allow this project to move forward.

Sincerely,

Dana Grover

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Mr. Robert Keilbach

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Rachael Pryor

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I was outraged to learn that GCEDC has uploaded a new revision of the SEQR application and supporting documents to the GCEDC website sometime between April 7 and April 8.

I demand that GCEDC further extend the date of the deadline for written comments, and re-set the date of the supplemental hearing for a time when it is reasonable to expect that those who would be most impacted by the data center complex have had a chance to review and produce meaningful comment on the new materials.

You must show greater respect for public participation in this review process. The stakes of this proposed project - in terms of impacts to our environment, public health, economic well-being, and quality of life - are simply too high.

Please slow this train down - the public deserves the time to review and comment. We are talking about generations of clean air, water, and our children's futures.

Sincerely,

Rachel Sherman

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

New York should be a leader on regulating data centers to align with environmental and social goals, not fueling them with tax breaks. Infuriating to see this kind of recklessness in our backyard.

Sincerely,

Emily Reisman

RE: STAMP – Project Double Reed SEQR Correspondence Supplement

Dear Mr. Masse:

This letter supplements the New York State Department of Environmental Conservation's ("Department") SEQR correspondences dated January 28, 2026, and March 31, 2026. The comments below are made in addition to the comments contained in those correspondences.

Endangered and Threatened Species

The SEQR full environmental assessment form (FEAF) dated February 18, 2026, indicates that the project site contains Northern Long-eared Bat (*Myotis septentrionalis*) or habitat suitable for the Northern Long-eared Bat.

To the extent that trees are present within the project site and tree cutting is proposed as part of the project, the applicant should run their proposal through the USFWS's Northern Long-eared Bat Determination Key[1] to comply with federal Endangered Species Act consultation requirements and determine if any federal restrictions apply. The Department recommends all tree cutting only occur between November 1 and March 31.

Please feel free to contact this office for further information or discussion.

Sincerely,

Ashley Kasperowicz

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

THIS IS UNACCEPTABLE. !!

Sincerely,

Norma Harrison

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Eliana Ontiveros-Oberg

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

If a company wishes to build a data center, or any other facility, they should be required to go through all planning processes and public hearings. They should also not receive government funding or tax incentives and should pay for the resources they consume, ie. water and power.

Sincerely,

Louis Martino

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Brenna Albert

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I was outraged to learn that GCEDC has uploaded a new revision of the SEQR application and supporting documents to the GCEDC website sometime between April 7 and April 8.

I demand that GCEDC further extend the date of the deadline for written comments, and re-set the date of the supplemental hearing for a time when it is reasonable to expect that those who would be most impacted by the data center complex have had a chance to review and produce meaningful comment on the new materials.

You must show greater respect for public participation in this review process. The stakes of this proposed project - in terms of impacts to our environment, public health, economic well-being, and quality of life - are simply too high.

Sincerely,

Heidi Banser

Now is the time to take the momentum caused by Trump's disastrous presidency and prove the democrats have a different, better, and more people centered plan for our country. If States like NY follow in the same destructive and anti-environmental footsteps as the republican party, how will we as democrats be any different? Many voters are disillusioned with the two party system believing both parties are equally evil and unconcerned with the people. This data center is a glaring example of government putting the people last. As the mother of a young child and another on the way, I am highly concerned about the planet's future and the life they will have. But equally important is the fact that this

data center will destroy the way of life for a group of native tribes members. We have done more than enough damage to their way of life as it is, and this data center could be the last nail in the coffin. We do not need another data center at the people's expense.

Sincerely,

Jacqueline van Arnold

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Fawn Bova-Schmidt

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

streampublichearing@gcedc.com

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I was outraged to learn that GCEDC has uploaded a new revision of the SEQR application and supporting documents to the GCEDC website sometime between April 7 and April 8.

I demand that GCEDC further extend the date of the deadline for written comments, and re-set the date of the supplemental hearing for a time when it is reasonable to expect that those who would be most impacted by the data center complex have had a chance to review and produce meaningful comment on the new materials.

You must show greater respect for public participation in this review process. The stakes of this proposed project - in terms of impacts to our environment, public health, economic well-being, and quality of life - are simply too high.

It is appalling that in 2026, we are still being disrespectful and undermining the sovereignty of tribal nations. The United States has lost tremendous goodwill and trust from our international allies in recent months because of our inability to respect the sovereignty of other nations. It is disgraceful that New York State is doing the same to tribal nations in our state who have already had to bear centuries of dispossession and marginalization.

The State also rarely issues permits within a 10-day period -- it is hypocrisy to expect the public to comment on a document with hundreds of pages when the State cannot do the same for its residents.

Sincerely,

Novem Auyeung

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

It is unconscionable that we are providing tax abatements to a corporation that is violating the rights and sovereignty of the Tonawanda Seneca Nation. It is 2026. The violation of treaties with tribal nations needs to stop now. We have already lost so much goodwill with our international allies. This will further ruin our nation's reputation as one that upholds its legal treaty obligations.

Sincerely,

Novem Auyeung

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Phoebe Gittelson

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

This data center poses an existential threat to the health and safety of human, plant, and animal life in the region. So does AI in general. Let alone that this is funded by a MAGA creep. We need housing, healthcare, and resilient food and social systems, not AI centers that drain our fresh water supply and create air and light pollution. NO DATA CENTER!

Sincerely,

Maric Kusinitz

Subject: April 16th 4pm public meeting

The email comment link on your stream page does not work - it goes directly to a blank page. All of the other links seem to be working correctly so I doubt it is an internet issue.

To be clear - I am 100% against this project. I don't think there is any point in elaborating - you've heard it all from hundreds of people again and again.

With regard to the upcoming public meeting:

- Please have two stenographers so that one person is not overtaxed by the lengthy proceedings. They can shift each other.

- Please consider scheduling short breaks at intervals of one or two hours so that everyone, you included, can stretch/relax/take a quick breather.

Finally, for good measure, I am 100% AGAINST this project.

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I was outraged to learn that GCEDC has uploaded a new revision of the SEQR application and supporting documents to the GCEDC website sometime between April 7 and April 8.

I demand that GCEDC further extend the date of the deadline for written comments, and re-set the date of the supplemental hearing for a time when it is reasonable to expect that those who would be most impacted by the data center complex have had a chance to review and produce meaningful comment on the new materials.

You must show greater respect for public participation in this review process. The stakes of this proposed project - in terms of impacts to our environment, public health, economic well-being, and quality of life - are simply too high.

STOP.

Sincerely,

Maryssa Peirick

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

streampublichearing@gcedc.com

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter. Voter that remembers

Monroe County Legislature
OFFICE OF THE MAJORITY CAUCUS

April 10, 2026

Dear Members of the Genesee County Economic Development Center,

I am writing to express my strong opposition to the proposed data center project and the developer's request for $1.46 billion in New York State tax incentives.

The scale of this project's public cost is deeply troubling when weighed against its limited public benefit. Despite its massive footprint, infrastructure demands, and long-term projects, the data center would create only 125 permanent jobs. This equates to approximately $11.7 million in taxpayer subsidies per job, which is an extraordinary and unjustifiable expenditure of public funds.

Equally concerning are the project's energy demands. The data center is projected to consume 500 megawatts of electricity annually, which is enough to power approximately 410,000 homes. To put this into perspective, that exceeds the total number of housing units in the County I represent, Monroe County. At a time when state and local leaders are grappling with rising energy costs and the burden on utility ratepayers, it is unreasonable to allocate such a vast share of limited energy resources to a single private development. This project risks exacerbating energy affordability challenges for residents across the region.

The proposed diversion of water resources is another point of concern. Genesee County has already committed 200,000 gallons of water per day to STAMP – water otherwise serving residents, households, and farms. Expanding this commitment through reliance on our Monroe County Water Authority resources to support industrial development in other parts of the state further prioritizes speculative projects over the needs of our community as well.

The broader impacts of this project are also unacceptable. The environmental strain, the burden on local resources, and the potential harm to the Tonawanda Seneca Nation, as well as to the rural and agricultural character of the County cannot be overlooked. These are not abstract risks, they are real and lasting consequences for communities, ecosystems, and future generations.

For all these reasons, economic, environmental, and ethical, I urge the Genesee Economic Development Center to reject the requested subsidies and reconsider this project. Our region's limited resources should be invested in initiatives prioritizing the delivery of meaningful, equitable, and sustainable benefits to the people who live and work here.

Thank you for your time and consideration.

Sincerely,

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

streampublichearing@gcedc.com

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I was outraged to learn that GCEDC has uploaded a new revision of the SEQR application and supporting documents to the GCEDC website sometime between April 7 and April 8.

I demand that GCEDC further extend the date of the deadline for written comments, and re-set the date of the supplemental hearing for a time when it is reasonable to expect that those who would be most impacted by the data center complex have had a chance to review and produce meaningful comment on the new materials.

You must show greater respect for public participation in this review process. The stakes of this proposed project - in terms of impacts to our environment, public health, economic well-being, and quality of life - are simply too high.

Your desperation to fill your failure of an industrial park in protected land is so obvious!

NO ONE WANTS THE DATA CENTER! Fill the space with an actual advanced manufacturing facility!

Sincerely,

Evelyn Wackett

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Eugene Bartels

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

streampublichearing@gcedc.com

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I was outraged to learn that GCEDC has uploaded a new revision of the SEQR application and supporting documents to the GCEDC website sometime between April 7 and April 8.

I demand that GCEDC further extend the date of the deadline for written comments, and re-set the date of the supplemental hearing for a time when it is reasonable to expect that those who would be most impacted by the data center complex have had a chance to review and produce meaningful comment on the new materials.

You must show greater respect for public participation in this review process. The stakes of this proposed project - in terms of impacts to our environment, public health, economic well-being, and quality of life - are simply too high.

New York's own legislature is currently debating a three-year pause because they recognize that we do not yet have the regulatory framework to handle the "AI boom" without destroying our local utility stability.

I urge the GCEDC to follow this lead: Implement a local moratorium. Do not approve further permits or incentives until the New York State Department of Environmental Conservation (DEC) and the Public Service Commission (PSC) complete their studies. Do not be the county that rushed into a "stranded asset" while the rest of the state had the foresight to wait.

Large facilities can consume up to 5 million gallons of water per day for cooling (and this will be one of the biggest ones in the country, that's not something to brag about). A 500 MW data center uses as much power as 400,000 households. Citizens are already frustrated with ever increasing utility bills and I promise, this will only make it worse. Do not forsake our planet, our people, for short term gain (which there barely is any to begin with).

Sincerely,

Valerie Boye

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Member
Justin Minchen

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

streampublichearing@gcedc.com

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

It is unacceptable that a data center is planned at a location that will adversely affect the Tonawanda Seneca nation. Indigenous people have borne the brunt of terrible policies, many of which have been genocidal and violent. We cannot add to that history. Not to mention putting the watershed for that entire area of the state. Please say no to this proposal

Sincerely,

Alexa Bradley

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I was outraged to learn that GCEDC has uploaded a new revision of the SEQR application and supporting documents to the GCEDC website sometime between April 7 and April 8.

I demand that GCEDC further extend the date of the deadline for written comments, and re-set the date of the supplemental hearing for a time when it is reasonable to expect that those who would be most impacted by the data center complex have had a chance to review and produce meaningful comment on the new materials.

You must show greater respect for public participation in this review process. The stakes of this proposed project - in terms of impacts to our environment, public health, economic well-being, and quality of life - are simply too high.

Sincerely,

Clemence Audic

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

John Croff

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

NO, NO, N O TO THE Stamp MEGA INDUSTRIAL SITE AND "DATA CENTER" in Alabama, NY, NOW AND IN THE FUTURE!!!

Sincerely,

jl keth

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Barry Small

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Chris Steinbrenner

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Deborah Cole-Wenderlich

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I was outraged to learn that GCEDC has uploaded a new revision of the SEQR application and supporting documents to the GCEDC website sometime between April 7 and April 8.

I demand that GCEDC further extend the date of the deadline for written comments, and re-set the date of the supplemental hearing for a time when it is reasonable to expect that those who would be most impacted by the data center complex have had a chance to review and produce meaningful comment on the new materials.

You must show greater respect for public participation in this review process. The stakes of this proposed project - in terms of impacts to our environment, public health, economic well-being, and quality of life - are simply too high.

Sincerely,

April Gow

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Doug Couchon

No Data Center in Genesee County! Data Centers raise our electricity bills, use up our clean water, pollute our environment, and endanger our jobs, Do not give them a permit or tax breaks.

Sincerely,

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I say "NO" to the request for $1.46 billion in tax abatements for a proposed data center complex at the STAMP mega industrial site in Alabama, NY. It violates the sovereignty and way of life of the Tonawanda Seneca Nation and poses massive social and environmental risks for all for New York state and the Great Lakes Bioregion. If Tonowanda Seneca Nation says, "No", it must not be built. No more corporate poisoning of the land, air and water. NO MEANS NO!

Sincerely,

Barbara Burns

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

streampublichearing@gcedc.com

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Jenna Wronski

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

streampublichearing@gcedc.com

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I am total against this Data Center

Sincerely,

Mark Potwora

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Angelika Kropiowski

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I was outraged to learn that GCEDC has uploaded a new revision of the SEQR application and supporting documents to the GCEDC website sometime between April 7 and April 8.

I demand that GCEDC further extend the date of the deadline for written comments, and re-set the date of the supplemental hearing for a time when it is reasonable to expect that those who would be most impacted by the data center complex have had a chance to review and produce meaningful comment on the new materials.

You must show greater respect for public participation in this review process. The stakes of this proposed project - in terms of impacts to our environment, public health, economic well-being, and quality of life - are simply too high.

Sincerely,

Maureen Milligan

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Magenna Brink

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Dr. Tom Angotti

GCEDC:

Across the country, states are fighting AI data centers in their communities because of the environmental impact on water supply, on wildlife habitat, and because these centers exponentially increase demand for energy, increase fossil fuel pollution, while at the same time strain our water resources and raise electricity prices across the country!

This data center proposal in Genesee County, NY is "more of the same: Huge profits for corporations, investors, billionaires, while we the people, degrade our lives with something we never wanted!

No data center in Genesee County (or any other part of NYS!

Sincerely,

Laurie C Wright

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Elizabeth Gaiser

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Complex? not healthy....

Sincerely,

Christine Swenning

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I was outraged to learn that GCEDC has uploaded a new revision of the SEQR application and supporting documents to the GCEDC website sometime between April 7 and April 8.

I demand that GCEDC further extend the date of the deadline for written comments, and re-set the date of the supplemental hearing for a time when it is reasonable to expect that those who would be most impacted by the data center complex have had a chance to review and produce meaningful comment on the new materials.

You must show greater respect for public participation in this review process. The stakes of this proposed project - in terms of impacts to our environment, public health, economic well-being, and quality of life - are simply too high.

Sincerely,

Lily Whiting

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

My family grew up near the Tonowanda Creek, where relatives & friends still live & fish on the creek. Double Reed would use 20,000 gallons of water per day for sanitary processes and in a closed loop cooling system. Such systems are known

to utilize anti-corrosive chemicals, including PFAS. No plan has been disclosed for the disposal or discharge of this industrial effluent, and the STAMP site lacks industrial
wastewater treatment or discharge capacity.
The application claims no impacts to wetlands or water

bodies. However, project site plans show multi-story structures built up to the borders of two regulated wetlands.
There's no real plan for water waste treatment, so
the true costs will be felt by everyone downstream.

Sincerely,

streampublichearing@gcedc.com

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

We need to insist that any data center runs on renewable energy energy, and any extra kilowatts are donated back to the local power grid to help lower everybody's electric bill.

Sincerely,

streampublichearing@gcedc.com

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I was outraged to learn that GCEDC has uploaded a new revision of the SEQR application and supporting documents to the GCEDC website sometime between April 7 and April 8.

I demand that GCEDC further extend the date of the deadline for written comments, and re-set the date of the supplemental hearing for a time when it is reasonable to expect that those who would be most impacted by the data center complex have had a chance to review and produce meaningful comment on the new materials.

You must show greater respect for public participation in this review process. The stakes of this proposed project - in terms of impacts to our environment, public health, economic well-being, and quality of life - are simply too high.

Sincerely,

Erin Stewart

A project of this scale threatens to swallow our community's resources while giving almost nothing back. A massive data center at the STAMP Mega Industrial Site would drain millions of gallons of water, devour staggering amounts of energy, and lock us into an industrial footprint that cannot be undone. This isn't smart growth—it's reckless development disguised as progress. Our farmland, our water, and our future are worth more than a deal that benefits corporations while leaving residents to shoulder the cost. It's time to draw a line and stop this project before it reshapes our region in ways we will regret.

Sincerely,

Patricia Howell

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Jeffrey Plache

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Our community deserves development that strengthens our region—not projects that drain our resources, threaten our environment, and offer little in return. A massive data center at the STAMP Mega Industrial Site would consume extraordinary amounts of water and energy, strain local infrastructure, and jeopardize the long-term sustainability of our natural resources. We can do better. We must stand together for smart, responsible growth that protects our farmland, our water, and our future. Let's stop this project before it reshapes our region in ways we cannot undo.

Sincerely,

Patricia Howell

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

New York State is subsidizing the building of a mega data center that will not benefit the local community or NY state residents. It may even drive up the electricity cost for the entire state.

Sincerely,

Yuk Yung

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I was outraged to learn that GCEDC has uploaded a new revision of the SEQR application and supporting documents to the GCEDC website sometime between April 7 and April 8.

I demand that GCEDC further extend the date of the deadline for written comments, and re-set the date of the supplemental hearing for a time when it is reasonable to expect that those who would be most impacted by the data center complex have had a chance to review and produce meaningful comment on the new materials.

You must show greater respect for public participation in this review process. The stakes of this proposed project - in terms of impacts to our environment, public health, economic well-being, and quality of life - are simply too high.

Sincerely,

Jennifer Barkan

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Thank you

Sincerely,

Elena C. Nuzzi

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Data centers are extremely power-intensive, with a single large site potentially using as much electricity as 100,000 homes. They consumed roughly 4.4% of U.S. electricity in 2023, a number projected to grow sharply, necessitating major investments in power. New York state is already challenged to meet the growing demand of power with sustainable, renewable energy. infrastructure. Furthermore, large-scale air or water-based cooling is needed to manage high heat generated by servers. Use of nearby water bodies will endanger the flora and wildlife.

Sincerely,

Johanna V Fallert

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

NO DATA CENTER AT STAMP

Sincerely,

Megan Smith

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

As a New Yorker, our utility costs are too high, and we don't need to add to the utility load by allowing this data center. In addition, New York is a gorgeous place to live, where we are working to clean and preserve the environment, not destroy it. This center would add pollution and destroy what we are trying to protect. There is no space for this data center in New York!

Sincerely,

Jodie Reaver

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

The data center complex, proposed by STREAM US Data Centers and Apollo Global Management, threatens the quality of life, well-being, and cost of living of local communities. It also violates the sovereignty and way of life of the Tonawanda Seneca Nation, and poses massive social and environmental risks for all of New York state and the Great Lakes Bioregion. And the complex would raise electricity rates and increase air pollution burdens felt by ALL New Yorkers.

Sincerely,

streampublichearing@gcedc.com

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

This project concerns me as a fellow WNYer who will be impacted by the air quality and electricity rate hikes if the data center goes through. This data center does not benefit the community. In fact, it harms it.

It is unwise for Genesee County to invest in a hyperscale generative AI facility given the likelihood of an impending AI economic crash. Such an investment puts residents at risk of fallout from the shaky AI market and potential economic crash.

Genesee County residents would pay the price while STREAM, Apollo, and the undisclosed Big Tech firm would profit.

Sincerely,

Emmanuelle Spronk

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I oppose the financial incentives request submitted by STREAM US Data Centers.

Sincerely,

Jamie Bryan

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Hi. I think putting this data center next to the wildlife refuge and next to the Tonawanda seneca nation is a very bad idea and a bad location the stamp project is a failed vision and has not lived up to what it was supposed to be.

Sincerely,

Aaron Vosburgh

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Data centers are SOLELY for the benefit of their backers and owners, exactly as with self-driving vehicles.

Sincerely,

Richard Freeman

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

NYS loves its natural resources, its children, its adults, and its clean air and water. We do not need nor do we want data centers. Stop this complex from becoming reality.

Sincerely,

Anne and Bill McCabe

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

The GLOW Region has the right to refuse to allow a massive data center to steal our resources. Don't silence us because you're afraid of dissent.

Sincerely,

Corey Miller Williams

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I was outraged to learn that GCEDC has uploaded a new revision of the SEQR application and supporting documents to the GCEDC website sometime between April 7 and April 8.

I demand that GCEDC further extend the date of the deadline for written comments, and re-set the date of the supplemental hearing for a time when it is reasonable to expect that those who would be most impacted by the data center complex have had a chance to review and produce meaningful comment on the new materials.

You must show greater respect for public participation in this review process. The stakes of this proposed project - in terms of impacts to our environment, public health, economic well-being, and quality of life - are simply too high.

Sincerely,

Kathryn McKinney

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

This is wrong and you know it.

Sincerely,

Meghan Eames

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I was outraged to learn that GCEDC has uploaded a new revision of the SEQR application and supporting documents to the GCEDC website sometime between April 7 and April 8.

I demand that GCEDC further extend the date of the deadline for written comments, and re-set the date of the supplemental hearing for a time when it is reasonable to expect that those who would be most impacted by the data center complex have had a chance to review and produce meaningful comment on the new materials.

You must show greater respect for public participation in this review process. The stakes of this proposed project - in terms of impacts to our environment, public health, economic well-being, and quality of life - are simply too high.

Sincerely,

Corinne Sandholzer

Subject: Re: Batavia High School and Pembroke High School

Hi there!

I wanted to follow up as we wrap up the Football Shirts for Batavia High School and Basketball Shirts for Pembroke High School. We still have a few spots remaining. We are finalizing everything this week and preparing for production.

Your business would be highlighted on 100 shirts per school. For Batavia High School, the t-shirts will be thrown out into the crowds at the Home Football Games! For Pembroke High School, the t-shirts will be given to the Basketball Players and thrown out into the crowds at the Basketball Games!

Businesses like yours help make the shirts possible, and in return your brand is seen by students and local families throughout the season. All of our products are at no expense for the school.

We're collaborating directly with Alex Veltz, the Football Coach at Batavia High School and Matt Shay, the Boys Basketball Coach at Pembroke High School. Only a select number of local businesses will be featured.

There's no payment required for 30 days. If you could please reply and let me know either way, I would really appreciate it.

Our most popular t-shirt ad sizes include:
***PREMIUM BANNER** (12" x 3.5") for only $1,275
***BANNER** (12" x 1.75") for only $690
***EXCLUSIVE SLEEVE** (4" x 3.5") for only $690
***BLOCK** (4" x 3.5") for only $450
***HANG TAG** (2" x 3.5") for only $355
***SIX INCH** (6" x 1.75") for only $349
***FOUR INCH** (4" x 1.75") for only $295
****Prices are per school**
***See our website at https://shirts.wehelpschools.com/project/**

If you want to respond via email, this is the info I will need for you to sign up:
*School Name(s):
*Business Name:
*Contact First & Last Name:
*Contact Title at Company (i.e. owner, manager, etc.):
*Contact Email:
*Business Phone Number for Ad:
*Contact Phone Number (if different):
*Public Address for Ad:

*Billing/Shipping Address (if different):

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Data centers are destructive and not made with the intentions of serving the future of humanity. The evidence around the depleting of land and natural resources that go into developing these places is an act of violence to the people. I do not want any of these in my state or as a part the future. Do better for the future generations by preserving nature and natures resources.

Sincerely,

Petra Nobilis

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I was outraged to learn that GCEDC has uploaded a new revision of the SEQR application and supporting documents to the GCEDC website sometime between April 7 and April 8.

I demand that GCEDC further extend the date of the deadline for written comments, and re-set the date of the supplemental hearing for a time when it is reasonable to expect that those who would be most impacted by the data center complex have had a chance to review and produce meaningful comment on the new materials.

You must show greater respect for public participation in this review process. The stakes of this proposed project - in terms of impacts to our environment, public health, economic well-being, and quality of life - are simply too high.

Sincerely,

Nicole Ilasi

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

stop the data center!

Sincerely,

Lionel Jensen

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

.

Sincerely,

Allison Knapp

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I was outraged to learn that GCEDC has uploaded a new revision of the SEQR application and supporting documents to the GCEDC website sometime between April 7 and April 8.

I demand that GCEDC further extend the date of the deadline for written comments, and re-set the date of the supplemental hearing for a time when it is reasonable to expect that those who would be most impacted by the data center complex have had a chance to review and produce meaningful comment on the new materials.

You must show greater respect for public participation in this review process. The stakes of this proposed project - in terms of impacts to our environment, public health, economic well-being, and quality of life - are simply too high.

Sincerely,

Nikki Carlsen

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Are you serious!?! This is highly disrespectful in case you didn't know! I understand that you are blinded by money but c'mon, these people are YOUR people!! It's another thing that you treat the indigenous people of this area that way because it's just the same old story out of the same old story book but now it's your own people that you are literally treating like second class citizens. You keep living up to and fueling my historical trauma. You really need to extend the comment date and push back the date for a public hearing……I don't even know why it's called that since none of you listen. You should give the land to Tonawanda Seneca Nation, anything that we would do with it will upset no one.

Sincerely,

Scott Logan

Oh look another shady action by a government agency. Very few people actually want this but you be sure to continue lining your pockets like the rest of the slime ball politicians. You are the most disliked political organization in Genesee

County and this is why. As far as the CEO, just go find a spot in the desert or figure out how to float it in the ocean. You're not welcome here.

Sincerely,

Casey Stockwell

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

This is a horrible idea for our environment and the Great Lakes/WNY region. Don't let the whims of the billionaire class make us complicit in the coming AI bubble burst, invest in services for people and families instead.

Sincerely,

Moira Madden

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I was outraged to learn that GCEDC has uploaded a new revision of the SEQR application and supporting documents to the GCEDC website sometime between April 7 and April 8.

I demand that GCEDC further extend the date of the deadline for written comments, and re-set the date of the supplemental hearing for a time when it is reasonable to expect that those who would be most impacted by the data center complex have had a chance to review and produce meaningful comment on the new materials.

You must show greater respect for public participation in this review process. The stakes of this proposed project - in terms of impacts to our environment, public health, economic well-being, and quality of life - are simply too high.

The dates for public comment must be extended. And the supplemental hearing must be re-sent. It is clear the local community does not want this project to move forward and their best interest are not being considered. This project if approved will result in irreparable environmental damage, potential health issues, loss of protected environments, an increases in electricity cost etc. It's clear that there is short sightedness to this project and economic gain for very few is not worth the risks. We are sick of more and more damage being done in order to line the pockets of greedy corporations all the while smiling and telling us the damage wont occur. To sacrifice the safety and well-being of community members and protected environments is disgusting and it's clear greed and politics is the real reason this project has not been squashed already.

Sincerely,

Charissa B Farnsworth

Sent: Wednesday, April 8, 2026 8:22 PM
To: streampublichearing@gcedc.com
Subject: Our Bronx Submission for STAMP Data Center Public Comment

To the Genesee County Economic Development Center (GCEDC):

My name is Sandra Lobo, Executive Director at Our Bronx (formerly the Northwest Bronx Community and Clergy Coalition). Our Bronx is a 52-year-old grassroots, member-led organization that unites diverse individuals and institutions to fight for racial justice and economic democracy through intergenerational organizing to transform the Bronx and beyond. Our Bronx uses direct-action community organizing to address affordable housing, public education, immigrant rights, youth, health justice, voting rights, and economic development, and to advocate for broader policy change in these and other areas. Our Bronx also has a long-standing commitment to climate resilience and environmental justice, dating back over four decades through our federally funded Weatherization Assistance Program.

We submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

Our organization is committed to the just implementation of the Climate Leadership and Community Protection Act (CLCPA). The proposed data center lies within a Disadvantaged Community, as designated by the Climate Justice Working Group, which subjects this project to review under the CLCPA. Per Section 7(3) of the law, in considering and issuing permits, licenses, and other administrative approvals and decisions, all state agencies, offices, authorities, and divisions shall not disproportionately burden Disadvantaged Communities. Given the threats posed by this project to the Tonawanda Seneca Nation which lies within this Disadvantaged Community, and our overarching respect for Indigenous sovereignty, we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of NYS Department of Environmental Conservations' recommendations with respect to the SEQR environmental review process, and call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts;

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that construction is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public; and

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation. It also threatens our Climate Law and violates the sovereignty and way of life of the Tonawanda Seneca Nation.

In closing: we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of DEC's recommendations with respect to the SEQR environmental review process, and call on GCEDC to reject the incentives application from STREAM US Data Centers.

Sincerely,
Sandra Lobo, Executive Director
Our Bronx

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I was outraged to learn that GCEDC has uploaded a new revision of the SEQR application and supporting documents to the GCEDC website sometime between April 7 and April 8.

I demand that GCEDC further extend the date of the deadline for written comments, and re-set the date of the supplemental hearing for a time when it is reasonable to expect that those who would be most impacted by the data center complex have had a chance to review and produce meaningful comment on the new materials.

You must show greater respect for public participation in this review process. The stakes of this proposed project - in terms of impacts to our environment, public health, economic well-being, and quality of life - are simply too high.

This is beyond underhanded at this point. There is new research every day about the negative impact these data centers are having on the environment and you need to prioritize the kinds of businesses that will add LONG term benefits to our area. Not a cash grab for a few years. I know you think the “right company” is moving in, but what happens when they decide to leave after they’re not getting their discounts anymore? Who moves in next?

Sincerely,

Laura Dumuhosky

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

as a 25 year old, I care deeply about the future of the environment. I have my whole life ahead of me. I can't live in filth

Sincerely,

Stacey Shpaner

Dear GCEDC Board of Directors,

I was outraged to learn that GCEDC has uploaded a new revision of the SEQR application and supporting documents to the GCEDC website sometime between April 7 and April 8.

I demand that GCEDC further extend the date of the deadline for written comments, and re-set the date of the supplemental hearing for a time when it is reasonable to expect that those who would be most impacted by the data center complex have had a chance to review and produce meaningful comment on the new materials.

You must show greater respect for public participation in this review process. The stakes of this proposed project - in terms of impacts to our environment, public health, economic well-being, and quality of life - are simply too high.

In order to have a transparent, clear process that involves public funds, an extended comment period and supplemental hearing at a later date is critical.

Sincerely,

Christina Mortellaro

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

This has to not exist in NY state for at least 39 years.

Sincerely,

streampublichearing@gcedc.com

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I work in conservation in western ny. This is too close to wetlands. It has rippling devastating impacts that we have already seen in other areas. No one is asking for this. We don't want to pay to be poisoned. Why are we even paying to begin with? This is going against what the people want and people have been actively speaking out and fighting this. We know who is pushing this data center both politicians and corporations. We said no.

Sincerely,

Catherine LaMantia

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I was outraged to learn that GCEDC has uploaded a new revision of the SEQR application and supporting documents to the GCEDC website sometime between April 7 and April 8.

I demand that GCEDC further extend the date of the deadline for written comments, and re-set the date of the supplemental hearing for a time when it is reasonable to expect that those who would be most impacted by the data center complex have had a chance to review and produce meaningful comment on the new materials.

You must show greater respect for public participation in this review process. The stakes of this proposed project - in terms of impacts to our environment, public health, economic well-being, and quality of life - are simply too high.

Dear GDEDC Board Members,

I am a lifelong resident of Genesee County and am deeply concerned about the Data Center being proposed for the Alabama STAMP site. This will have irrevocable impacts on our environment. The negatives far exceed the few positives related to this project. Due to the recent revision to the SEQR I am asking that GDEDC extend the deadlines for public comments and for the public hearing so that the residents of the area have time to review the new documents. Thank you, Chelsie Callan

Sincerely,

Chelsie Callan

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

We've done nothing but kill and disgrace our Native American populations. The last thing we need to do is further take their resources and water. Unconscionable. Do NOT proceed with the data center.

Sincerely,

Carly Richardson

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I was outraged to learn that GCEDC has uploaded a new revision of the SEQR application and supporting documents to the GCEDC website sometime between April 7 and April 8.

I demand that GCEDC further extend the date of the deadline for written comments, and re-set the date of the supplemental hearing for a time when it is reasonable to expect that those who would be most impacted by the data center complex have had a chance to review and produce meaningful comment on the new materials.

You must show greater respect for public participation in this review process. The stakes of this proposed project - in terms of impacts to our environment, public health, economic well-being, and quality of life - are simply too high.

In order to submit a thoughtful and relevant comment, the written comment period needs to be extended.

Sincerely,

Em Grant

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

We don't want it!!

Sincerely,

Ellie Marino

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

NO COMMENT

Sincerely,

Peter Ingraldi

Genesee County Economic Development Center
Attn: Board of Directors
99 Medtech Drive
Batavia, NY 14020

Dear Board of Directors:

On behalf of the International Brotherhood of Electrical Workers (IBEW) Local 41, I am writing to express our strong support for the proposed STREAM US Data Centers, LLC project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic private investment of approximately $19.4 billion in our region—an unprecedented opportunity that will deliver lasting economic benefits to our communities. The scale of this investment will not only strengthen the local economy but also generate meaningful, long-term opportunities for working families throughout Western New York.

From a workforce perspective, the STREAM project is especially significant. During construction, it is expected to create more than 1,200 jobs annually for skilled trades workers over a five-year period. These are exactly the kinds of high-quality, family-sustaining careers that IBEW Local 41 members are trained and ready to perform. Upon completion, the facility will provide 125 permanent, good-paying jobs, while also providing additional jobs through small local businesses and contractors across the region.

Beyond job creation, the financial impact to the community is substantial. The project is projected to generate approximately $285 million in revenue for local taxing jurisdictions, including school districts. Additionally, at full build-out, it is expected to produce roughly $270 million in local sales tax revenue from electricity usage. These funds will play a critical role in strengthening public services and improving essential infrastructure, including water systems throughout Genesee County.

Equally important, STREAM US Data Centers has demonstrated a commitment to being a responsible corporate partner. Their pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects an understanding of the importance of transparency and collaboration.

In our view, this project is a transformative economic development opportunity—one that comes along perhaps once in a generation. It has the potential to deliver lasting benefits for workers, families, and the broader community for decades to come.

For these reasons, IBEW Local 41 strongly urges the Board to support the STREAM US Data Centers, LLC project at STAMP.

Sincerely,

Gregory R. Inglut
Business Manager/Financial Secretary

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I am glad that GCEDC plans to hold a supplemental public hearing on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has extended the written comment period. Additionally, I demand:

- The Board of Directors must be present at this hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal; and
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;

About 225 people attended the meeting, but ONLY (2) accepted your Monster Data Center. You are not listening to the people of Genesee nor surrounding area. The other 223 said hell NO. You must be dumb or just plain stupid. To place such a Data Center in the middle of both a Federal/State Bird Sanctuary and animal reserve. Plus in the backyard of the Tonawanda Seneca Nation. You are not listening. You just see the money you will be making. What 200,000 per person?

Sincerely,

David Sullivan

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

We don't need or want AI. We need a planet for all rather than profits for few.

Sincerely,

Katherine Varga

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

DO NOT APPROVE THE DATA CENTER!
The environmental impact is monumental to the wildlife and the neighboring Seneca Nation. We have a responsibility to be good neighbors to the Seneca. And one of the ways to do that is to keep the land next to theirs free of this highly impactful industry.
This company will not give us the name of the true company that is behind this development. Why do they keep the truth from our citizens? No transparency means they must have something to hide.

PLEASE, PLEASE SAVE OUR AREA FROM THIS MONSTROSITY . DENY APPROVAL OF THE DATA CENTER.

Sincerely,

Mary Jo McConnell

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I am a resident of Monroe County who has often visited Genesee County to enjoy hiking and photography in the abundant wilderness areas like the Iroquois National Wildlife Refuge, as well as spend time with family who have made their lives in this area. I strongly oppose the data center project at STAMP because it will negatively impact the environment, the lives of people I care about, and the Tonawanda Seneca Nation whose territory is adjacent to the site.

As a Monroe County Resident, I also oppose the project because of the negative impacts on our area as a direct result. Those include the expectation of dependence on Monroe County water infrastructure by the GCEDC and STREAM, and the impact of a $6.2 million loss in funding for our already struggling transit system, the Rochester Regional Transportation Authority.

As a New Yorker, I am opposed to throwing yet more good taxpayer money after bad into STAMP and the especially poor investment in a data center. I work in tech and am well informed about the impending collapse of the over-inflated AI bubble we are currently in. Moreover, the companies building and using data centers do NOT need taxpayer subsidies. Economically, this proposal is a terrible investment of taxpayer money -- and yes, tax abatements are a redistribution of tax dollars from local communities to wealthy corporations who absolutely do not need it.

The companies involved in building and using data centers for AI are making record profits already. They do not need Genesee County taxpayers' help in building more capacity that the state and county don't have infrastructure to support. The few jobs that may be created are NOT guaranteed to go to locals, be paid decently, to be "tech jobs" since those are typically remote for a data center, or even be directly employed by the companies involved. Nothing is preventing the permanent jobs from being lower-paid contract or temp workers. Moreover, it appears that STREAM is applying for a waiver from local labor policy, so the construction jobs involved in creating the data center will likely go to out-of-state, temporary workers.

We, as New Yorkers, need to do better for ourselves and also in our relationship to the Tonawanda Seneca Nation. Common sense and common decency both say NO to the data center proposal at STAMP.

Sincerely,

Molly Des Jardin

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I am glad that GCEDC plans to hold a supplemental public hearing on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has extended the written comment period. Additionally, I demand:

- The Board of Directors must be present at this hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal; and
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;

Sincerely,

Marica Bohn

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

No data centers ruining Western NY!

Sincerely,

AJ McGuire

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud [member/retiree/family member] of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,

Michael J Gaiser
IBEW Local 41 Member

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

The data center complex, proposed by STREAM US Data Centers and Apollo Global Management, threatens the quality of life, well-being, and cost of living of local communities. It also violates the sovereignty and way of life of the Tonawanda Seneca Nation, and poses massive social and environmental risks for all of New York state and the Great Lakes Bioregion. And the complex would raise electricity rates and increase air pollution burdens felt by ALL New Yorkers.

Sincerely,

streampublichearing@gcedc.com

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I am glad that GCEDC plans to hold a supplemental public hearing on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has extended the written comment period. Additionally, I demand:

- The Board of Directors must be present at this hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal; and
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;

Your own paid consultants have pointed out multiple issues with this application. Why are you pushing forward a proposal that has so many holes in it, oh, wait, it's the $146 million in fees that you will be getting. That is a Very bad look for your planning board when none of the residents in this area want it. Stop Stamp!!!

Sincerely,

Walter Wawrzyniec

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

This is a hideous proposal that would in no way benefit NY residents. Data center complexes are environmentally destructive, leech off communities, and provide very few jobs. They function primarily as assets for tech corporations to use to siphon more money from the rest of us in an already precarious world. I hate this. I don't want this. This data center subsidy proposal disgusts me. I cannot emphasize enough how much I hate this.

Sincerely,

Lydia Carli

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

My name is Julia Hartman. I am a resident of Chicago, IL, and I am writing in strong opposition to the proposed data center complex at STAMP.
I am deeply concerned about the tax abatements being considered for this project. Apollo Global Management is one of the largest investment firms in the world. Subsidizing a corporation of that scale — at the expense of local taxpayers and communities — is not economic development. It is a transfer of

public wealth to private interests. While I live in “the Windy City” the corruption tied to this initiative takes the lead.

These abatements shift the financial risk onto residents while locking in very real harms: depressed property values, increased energy costs, damage to local wildlife and natural resources, and a diminished quality of life for the people who already call this area home.

Rural communities like ours depend on attracting young families, farmers, and small business owners — people who choose places like this because of their character and their land. A large-scale industrial data center sends the opposite message. It tells the next generation of residents to look elsewhere.

I am also troubled by the structural conflicts of interest embedded in this process. GCEDC, which stands to receive over $1 million from this deal, is simultaneously acting as the lead agency for environmental review. STREAM is supplying its own research for that same review. This is not an impartial process, and the community deserves one.

The residents most affected by this project have been told they have no voice. I am asking you to prove that wrong. All the way from Chicago, I’m pleading you decide to make the right call in word doing so much wrong.

Please oppose the STAMP data center proposal and reject any associated tax incentives.

The country is watching.

Julia Hartman

Sincerely,

Julia Hartman

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

The massive data center as proposed presents extreme challenges to the environment in which it is located. It will destroy the bird sanctuary, and the forested area which provides a livelihood to the Tonawanda Seneca tribe that hunts and fishes in the area for their own sustenance. More than that, the amount of electricity required will draw energy from the electrical grid which is already overtaxed and will affect residents across New York State. Air and water do not have geographical boundarries and toxic chemicals that are released into the air or through the water affect everyone. This center must be

reduced in scope and size! All the environmental safeguards available need to be in place before even a portion of this project can be approved.

Sincerely,

Phyllis Tierney

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Fresh water is a human right

Sincerely,

Jennifer Warren

PRIVATE EQUITY STAKEHOLDER PROJECT

To the Genesee County Economic Development Center (GCEDC):

My name is Nichole Heil and I am with the Private Equity Stakeholder Project (PESP). PESP is a nonprofit watchdog organization with a mission to bring transparency and accountability to the private equity industry and help empower impacted communities and investors. I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

In August 2025, Apollo Global Management (Apollo) acquired a majority stake in STREAM US Data Centers. Apollo is one of the largest private equity firms in the world, with $938 billion in assets under management and a vast portfolio of companies across the economy. Apollo's portfolio companies have a history of labor disputes and the firm owns two of the largest hospital systems in the U.S. which have experienced cuts to services, layoffs, poor quality ratings, and regulatory investigations.

After acquiring a company, private equity firms are often laser-focused on growing cash flow, using heavy debt loads, cutting costs for themselves, and raising the cost to consumers. This can include reductions of qualified staff and the deferral of necessary maintenance and capital improvements. Such reductions and cutbacks are especially risky in the energy generation and infrastructure industry, creating the potential for serious safety hazards, environmental violations, and reliability concerns. In addition, private equity-owned firms do not have to make regular filings under SEC rules, so there is less information publicly available information about the company and its plans for the future.

Private equity investors often demand higher profits than normal market investors, and those profits may come at the expense of workers and consumers. The STREAM data center complex is anticipated to receive a whopping $1.4 billion in subsidies. Outside of temporary construction jobs, it's unclear what benefits Genesee County residents may receive.

While the potential long-term profitability and feasibility of large-scale data center infrastructure expansion remain speculative, the environmental impacts and social costs of data centers are clear and already happening. Aside from the harmful emissions caused by fossil fuel power generators to power the data centers, the data centers require large swaths of land, high levels of electricity and water to operate and cool servers, and cause air and acoustic pollution, which all impact the local biodiversity and communities. Further, the increased electrical and water needs for the data centers have burdened local ratepayers. A *Bloomberg* analysis of wholesale electricity prices found that in areas located near significant data center activity, electricity costs 267% more for a single month than it did five years ago in those same areas.

Due to the reasons highlighted above about the elevated risks of infrastructure development backed by private equity, and specifically by Apollo, PESP supports the community's demands that the GCEDC should go back to the drawing board with residents to collectively envision a new path for economic development in the GLOW Region that finances and enables the amenities, services, and infrastructure that meets peoples' actual needs while providing protection from undue ecological and economic risk and harm.

PESP supports the community's demand that GCEDC follow all of NYSDEC's recommendations with respect to the SEQR environmental review process and asks that GCEDC reject the incentives application from STREAM US Data Centers and Apollo Global Management.

Thank you,

Nichole Heil
Senior Research and Campaign Coordinator
Private Equity Stakeholder Project

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

As a resident of Akron/Newstead, only 8 miles down the road from the proposed data center, I wholeheartedly oppose its construction. My family operates a small farm and the negative impact of such facilities on the land is only just beginning to be understood, including effects such as warming of local areas surrounding data centers, to say nothing of the strain on the energy grid and local water systems. To place such a facility so near the locally beloved and nationally significant Iroquois National Wildlife Refuge is unconscionable, as is infringing on the cultural practices and land belonging to our valued neighbors, the Seneca Nation. The proposed subsidizing of the project by taxpayers is just

another example of corporations and the wealthy attempting to line their own pockets at the expense of America's working people, and is frankly, disgraceful. Under no circumstances should this data center be built.

Sincerely,

Laura E Weymouth

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

To the GCEDC:
I write to total opposition to the proposed data center and I appeal to you on both practical and moral grounds.
1. All around the country, data centers are being proposed as "bait and switch" operations. Land is purchased for one stated purpose and when that doesn't materialize (for a variety of reasons), data centers try to move in to 'save the day.' In one case, for example, farm land was sold to build a golf

course and the next thing neighbors knew, the golf course proposal was off the table and there was a data center proposal in front of them. This is happening over and over again all around the country. It is predatory. IThe original STAMP proposal may have had some merit (though that is debatable), but it certainly wasn't approved as a site for a monster data center.
2. Even with the current proposal, the cost/benefit ratio of tax incentive to employee is about 11.7 million!! That is unconscionable, but it gets worse. Data centers all over the country that have some history of operation always (purposefully) go DOWN in number of employees. Even the meager 100-125 employees currently proposed for this site will not hold up over time. The goal of data centers is to operate with a skeleton crew. The proposed employers will not tell you that, but the statistics from around the country will. Think of the cost of the tax breaks and the cost to the environment and the Seneca Nation for what? Ultimately about 20 jobs??? Please, be rational. It's just not worth it in the long run.
3. There are many, many old unused industrial sites whose environments have already been degraded beyond reclamation. If you MUST put up a useless data center, do it at one of those. DO NOT destroy the fragile and beautiful eco-system around the current STAMP site for a quick buck. This proposal is a hologram - its value disintegrates upon close scrutiny, which makes it all the more imperative not to destroy the environment in order to build it. Please, take the LONG view for our region and resist what seems to be a 'quick fix.' You have to consider legacy building. Ten years from now the data center will be just a useless hull in the middle of a destroyed ecosystem and people will remember you as the members of the GCEDC who destroyed the beauty and lasting value of our region.

Sincerely,

streampublichearing@gcedc.com

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Development of AI is unavoidable. However considering negative impact of data centers, before any develops continues the state has to create laws and regulations which obligates developer : compensated communities for electricity, create infrastructure for environmental protections, pay communities for taking the e land. Non of tax payers money should ever going to AI centers. The rush with ai centers before proper regulations in place happens because of greed and so called urgent competition with China. Not of it worth health and lives of American people .

Sincerely,

Julia Aldana

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud member of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,

Kristen Brock
IBEW Government Affairs Department

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I am glad that GCEDC plans to hold a supplemental public hearing on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has extended the written comment period. Additionally, I demand:

- The Board of Directors must be present at this hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal; and
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;

Sincerely,

Justin Philipps

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I decided to send another one because my land and culture is important to me as a young women in my community, it means a lot to me to have open land that is indigenous to my people and available to be able to go and pick the indigenous medicine that we need, not only does it have medicine, it has wildlife, and with all the chemicals and noise we won't have those, and it's all part of who we are, and to preserve the wildlife and make this place a home to them, but unlike you guys, you guys have no care for the earth, which is self explanatory to the harmful chemicals ur feeding off to us and the animals, and it hurts that you bring all the noise to where we live, go and put it in ur backyard and tell us how that feels, what it

does to us, also does to the wildlife and plants. So please take this into consideration and stop the harmful acts of ur project.

Sincerely,

Rihanna Dockstader

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

A data center like this is absolutely unacceptable. The sacrificing of our environment and health for the profit of corporations needs to stop. Additionally, what sufficient reason can this group have for violating the sovereign rights of the Seneca people? It is inexcusable.

Sincerely,

Linaria Larkin

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

First, the amount of energy required to run the data center at STAMP is enough energy to power 410,000 homes. That's the entire GLOW region and all of Rochester!

Second, the founders of Apollo Global management have significant ties to Epstein.
Third and maybe most important, to spend this kind of money on something so environmentally taxing in this moment while Governor Hochul is walking back funding for the CLCPA is absolutely ludicrous!

Sincerely,

streampublichearing@gcedc.com

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I am glad that GCEDC plans to hold a supplemental public hearing on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has extended the written comment period. Additionally, I demand:

- The Board of Directors must be present at this hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal; and
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;

To the GCEDE Board,

I would like to implore you all to reconsider any affiliation or moving forward with this project for the data center. You might not see it now , but the long lasting effects of this is going to haunt us, your children , grandchildren , etc. We need to listen to the Seneca.Nation people and what they are saying , and how this will affect them as well and the future of all of our people. You might think it's a great idea now, but what happens when this ten to fifteen years is up? What will this empty building become? And what will we have sacrificed to have built it? What will happen to the land around the area? The animals within it? What will happen to the groundwater?
I hope you really take some time to reflect on these questions.And what the people of the area want.
Thank you,
Marcia Bohn

Sincerely,

Marica Bohn

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations

Sincerely,

Katharine Constas

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

We are seeing data center center construction be halted across the United States. We do not want to be stuck in limbo with Stream when there is legal action to halt data center construction or when new technology inevitably emerges rendering Stream's current plan outdated and useless.

Please put your time, energy, and power in financial assistance using tax payer dollars (aka abatements, one in the same once it's all said and done,) into industry that benefits the community. Governor Hochul

is wavering on her support of STAMP. Please don't let Apollo Global Management insert themselves into this beautiful rural area.

Sincerely,

streampublichearing@gcedc.com

I grew up in wolcottsville, NY and have seen the area really grow up over the years some good and some bad. Realistically all of the land out that way is marsh land and there are better areas to put a data center. Areas that don't threaten boundaries established with local natives or threaten the natural wildlife (i.e muskrats, beavers, opossums)

Sincerely,

Ashleymarie Zysek

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

In addition to all the other negative impacts of the data center, it would **use 500 MW of electricity - equivalent to what 410,000 residential homes use in a year.** Adding this data center to the grid would increase electricity rates at a time when basic necessities are becoming even more unaffordable for many working people (and it would increase downstate air pollution).

Sincerely,

Katrina Swartz

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Thank you.

Sincerely,

Teresa M Theophano

Subject: STREAM US Data Centers LLC Public Hearing

How do you feel that even the PPG is calling the Stream data center a bad deal. I know you stand to get a huge payout if this data center goes through, but when all of the citizens do not want this center with all of the known and unknown negatives, what does that say about you all?

You are selling out our county and state for a very ill advised massive monstrosity and giving them the bank, while we pay very high property taxes here. I lived in Erie County in Clarence for years on a 40 acre farm with a huge house, huge riding arena, large barn, giant garage and only paid $6000 a year. Now I have a small ranch in one acre in front if a cow farm in a busy street and pay almost $10,000 a year. We just turned 70 and this is a huge burden, but sure! Go ahead and give them historically high subsidies! You know, they still would've come here even without the subsidy. They are laughing all the way to the bank over this little backward naive county. I'm appalled as are most people at how wrong this is. Our roads will be even worse with five years of heavy trucks and machinery and they won't even be paying enough taxes to fix them, we will!!!

And I can't even believe where this will be sited! Right next to 20,000 acres of pristine wetlands/marshlands and Native American lands! You couldn't possibly have picked a worse place to put it. The endangered and migratory birds will have their senses overwhelmed but the frequency if the constant vibration and lights. And let's screw over the native Americans yet again. Shame on you!

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

The uninformed rush to build a massive resource hungry data center without full investigation and accountability is no solution to the challenges ahead in terms of energy use and climate changes. It s a low-hanging fruit in terms of sustainable development that ultimately benefits a few. The harm it will cause due to a misinformed view of what actually drives up energy costs is not only immediate but a harm to generations based on the best available science.

Sincerely,

Susan G Crowell

4/3/26 Comments by Janet Lenichek, Williamsville, NY, 14221

There is so much wrong with this data center project proposal, that it's difficult to know where to begin. I'll start with the tax incentives.

- There's an assumption at GCEDC that if not for the tax incentives being offered, Stream Data (which is now owned by Apollo Global Management) would *not* build a data center at the STAMP site.Yet, academic research has shown that 75% or more data center projects would locate in a community even *without* tax incentives. **This begs the question: Why is GCEDC offering tax incentives to a multi-billion dollar private equity corporation?**

- Apollo Global Management had a Total Revenue of $26.1 B and Net Income of $4.6 B in 2024.

- In fact, according to a recent reporter at TruthOut.org, Apollo's former and current CEOs both consulted with Jeffrey Epstein to figure out what to do with all the money they earned from working as executives at Apollo. They were seeking advice for how to avoid paying taxes! Wealthy businessmen with ethics and any sense of fairness don't try to get out of paying taxes.

- In my opinion, GCEDC should offer more tax incentives to small business owners and farmers who are struggling to survive financially, NOT to Apollo Global Management. Let's help our local and regional business people instead of multi-billion dollar private equity companies who don't need the help and will provide relatively few full-time permanent jobs.

- Data centers are notorious energy hogs that cause electricity costs to increase. In northern Virginia, electricity rates increased 26% over a few years when they allowed data centers to set up shop. That cost was paid by every ratepayer, not just the data centers.

- Data centers create tons of electronic waste because they need to update their equipment frequently. Who will pay for the disposal or recycling of all that waste? Genesee County? The Town of Alabama?

- With regard to the environment, data centers cause noise, air and water pollution. They force wildlife to move elsewhere.

- The Tonawanda Seneca Nation will be the people most affected, since they rely on hunting in the Big Woods for meat. Will the deer stay in the Big Woods? Or will they move on to find a much quieter place to live?

Sincerely,

streampublichearing@gcedc.com

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Please reject this data center

Sincerely,

Finn Ugine

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I do not support any subsidies for profit- driven businesses. They need to "bake in" all costs when developing a business plan; taxpayers should not be expected to shoulder the business's expenses.

Sincerely,

Brian Braisted

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Double Reed would use 20,000 gallons of water per day for sanitary processes and in a closed loop cooling system. Such systems are known to utilize anti-corrosive chemicals, including PFAS.

No plan has been disclosed for the disposal or discharge of this industrial effluent, and the STAMP site lacks industrial wastewater treatment or discharge capacity.
Currently, sanitary wastewater at STAMP is held onsite in a "Hold and Haul Tank" and then trucked offsite for treatment

SAY NO TO STAMP!!!

Sincerely,

Jessica Forgette

Hello Genesee County Economic Development Center,

My name is Alex Mogavero, and I am writing to voice my strong opposition to the construction of the proposed data center in Alabama, NY.

In addition to being an affront to the Tonawanda Seneca Nation, this data center poses a danger to Western New York's environment and natural resources, especially our water, and the price of

electricity, which many families already struggle to pay.

Further, the AI technologies that this data center supports pose a danger not only to jobs for Western New Yorkers (and people outside of the region), but are also having an incredible negative impact on our cognitive abilities (not to mention the numerous other risks that dependence on this technology is generating).

As a Western New Yorker, I do not want this, or any other data center in my region, and I want to see the immediate suspension of this project.

Yours sincerely,
Alex Mogavero

Sincerely,

Alexander Mogavero

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I am glad that GCEDC plans to hold a supplemental public hearing on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has extended the written comment period. Additionally, I demand:

- The Board of Directors must be present at this hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal; and
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;

The amount of tax benefits to be given out for this project do not justify the small amount of people it would employ. This project would harm the environment and use outrageous amounts of electricity. Do not build this data center!

Sincerely,

Cynthia Whiting

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

These data centers will not produce enough jobs to warrant subsidies being offered. They consume vast sums of power to the detriment of the grid and the ratepayers who just went through massive escalations in their utility costs. They will consume vast sums of water far beyond what the area can support. This is the wrong project in the wrong area and only serves the GCEDC the opportunity to get money back. Giving 1.46 billion in subsidies is a huge inequity to the region when that money could be better served to fund real job growth the area needs.

Sincerely,

Michael Thorp

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Laws are in place for a reason. Protect our land, water and community. This cannot happen.

Sincerely,

Chelsea Smith

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

- This project is a BAD investment for Genesee County, the GLOW Region, WNY, or NYS
- The data center complex would have a high direct and indirect cost. The requested subsidies would be among the largest ever awarded to an economic development project in NYS, and among the largest subsidy packages ever awarded to a data center project anywhere in the US

- It is unwise for Genesee County to invest in a hyperscale generative AI facility given the likelihood of an impending AI economic crash. Such an investment puts residents at risk of fallout from the shaky AI market and potential economic crash.
- Genesee County residents would pay the price while STREAM, Apollo, and the undisclosed Big Tech firm would profit
- The GCEDC needs to go back to the drawing board with residents to collectively envision a new path for economic development in the GLOW Region that finances and enables the amenities, services, and infrastructure that meets peoples' actual needs while providing protection from undue ecological and economic risk and harm

Jobs

- This project would yield only 125 jobs, at a per job cost of $11.7 million
- These are not good jobs: There is no requirement that permanent workers must be direct company employees, meaning the data center company can hire workers through specialized temp agencies (temp workers tend to have lower wages or benefits than direct employees; as shown in an example of a former Google data center technician).
- The company is applying for a waiver from local labor policy: meaning that these jobs would not be guaranteed to come from Genesee County or even WNY. As evidence shows, many data center construction workers come from other parts of the country.
- Data centers often employ remote workers as permanent employees
- Not only do data centers not create a substantial number of permanent jobs, those projects also do not attract any suppliers. Because data centers do not produce anything and the equipment they use come from outside of a state or even outside of the US, they do not generate economic development in the same way that another business would.

Cost of Living concerns

- Data centers are associated with higher electricity rates. This data center is projected to raise residential rates across NYS. Rates would go up for all NYS ratepayers.
- Data centers are associated with lowered property values

Tax abatements

- There is an assumption that if not for the tax breaks offered, the company in question would not come. Academic research has shown that 75% or more data center projects would locate in a community even without subsidies
- an independent audit of Georgia data center incentive program also found that 70% of data centers would locate in the state without the tax breaks.

PILOT (Payment in Lieu of Taxes)

- A lowered payment negotiated for businesses. Often last for 15-20 year. Serve as incentives to draw businesses and investments to an area, like STAMP.
- The life span of data center facilities is far shorter than the 30 year term of the proposed PILOT: most data centers last 10-15 years, whereas the PILOT is for 30 years.
- There is no indication in the application materials of the applicant's plans past the life span of the facility and their commitment to Genesee County. We could be left with a massive hulking empty warehouse
- The subsidy package does not take into consideration the social, environmental, and individualized costs of investing in this facility: costs of health impacts from increased pollution, decrease in property values, loss of ecotourism economic revenue
- And importantly, this project does not provide any social goods to the people of Genesee County and the GLOW Region: rather, it siphons tax dollars toward investment in a project that will strain infrastructural resources such as water and the transmission system, make the region less attractive to newcomers and longtime residents, and not provide any amenities or commitment to long term sustainable jobs

Generative AI

- Generative AI is not a social good! There is no public benefit. The public should not pay to finance Big Tech, Private Equity, and multinational data center developers to use our limited natural resources toward producing something with no social value

Non-Disclosure Agreement (NDA)

- STREAM has signed an NDA with GCEDC, which means that we do not know the identity of the eventual Big Tech operator.
- NDAs are widely used within the data center industry and are facing pushback from communities demanding transparency and protection from the risk of bringing an unknown corporate actor into their community

Data Center Opposition

- Opposition by local communities to data centers continues to grow across the county.
- Many communities are ending subsidies for data centers and demanding protections and environmental regulations
- Data Center Watch Report Q2 2025: 125% surge in data center projects being blocked

Why this data center will negatively impact quality of life and environmental quality

***Statement from Dr. Kirk Scirto regarding likely health impacts*

Site Plan

- 3 total structures at 2.2 million square feet. The site would be 135 acres total. STREAM proposes to use the former Plug Power site.
- Both parcels are in close proximity to the Tonawanda Seneca Nation's Big Woods (½ mile at the nearest), a biodiverse primary growth forest. The North Parcel is close to residential homes and yards.
- EAF claims Double Reed will create 87.5 acres of new impervious surface area.

Water usage

- Double Reed would use 20,000 gallons of water per day for sanitary processes and in a closed loop cooling system. Such systems are known to utilize anti-corrosive chemicals, including PFAS.
- No plan has been disclosed for the disposal or discharge of this industrial effluent, and the STAMP site lacks industrial wastewater treatment or discharge capacity.
- Currently, sanitary wastewater at STAMP is held onsite in a "Hold and Haul Tank" and then trucked offsite for treatment

Wetlands and waterbodies impacts + stormwater management

- The application claims no impacts to wetlands or water bodies. However, project site plans show multi-story structures built up to the borders of two regulated wetlands.
- Design would create multiple extensive impoundment ares
- The entire site lies upstream of the Tonawanda Creek, which provides drinking water via wells to Nation citizens
- Expert hydrogeological review raises extensive questions about faulty assumptions regarding hydrological flow

Power usage

- The data center would require 500 MW of electricity / year, enough to power 410,000 residential homes
- This power draw represents ⅝ of the power planned by GCEDC to flow to a partially constructed onsite substation at STAMP
- While GCEDC claims that STAMP will utilize "green" energy, the 345 kV transmission line that would provide power to the substation includes a mixture of energy sources, including hydropower from the Niagara River but also fossil fuel produced energy

- The addition of 500 MW to the grid would add strain to an already strained electrical grid in NYS, leading both to more frequent brownouts and blackouts as well as the generation of additional air pollution burdens across the state
- The Tonawanda Seneca Nation and its allies have extensively advocated to the New York Power Authority that no subsidized electricity should be awarded to tenants at STAMP. STREAM US Data Centers has indicated that the data center operator would be likely to apply for "high load factor power," a subsidized source of electricity. Subsidized electricity represents a form of indirect subsidy to the (undisclosed) Big Tech operator

Onsite power generation and air pollution

- Double Reed would maintain 12 onsite diesel generators and would store 114,000 gallons of diesel fuel per year onsite. Generators would produce emissions of 5,333 tons of Co2, as well as nitrous oxide and Hazardous Air Pollutant emissions
- STREAM claims no air permits needed; NYSDEC disagrees

E-Waste

- Application claims the data center will generate 120 tons of waste per year. There is no plan for disposal of e-waste although this is frequently associated with data centers

Noise and other health concerns

- Extensive questions remain about the claims regarding noise made in the application
- GCEDC does not plan to conduct an independent noise study.
- 24/7 noise produced by data centers is associated with longterm mental and physical health effects.

Threatened and Endangered Species

- Onsite occurrence of Endangered Species including Heartleaf Plantain, Least Bittern, Short-eared owl, Northern Harrier, Bald eagle, Northern Long Eared Bat
- The Iroquois National Wildlife Refuge, located 5 miles away from the STAMP site, is home to multiple pairs of nesting Bald Eagles

Genesee and Monroe County specific comments

- Genesee County faces a severe and ongoing insufficiency of both water and water infrastructure. The County has long struggled to adequately finance its Water Supply Project, which would bring up to 8 MGD daily of much needed water from Lake Ontario into the County via an agreement and infrastructural tie-ins with the Monroe County Water Authority
- Now, GCEDC is trying to leverage this vulnerability by hinging the financing of Phase 3 of this project on fees paid into the infrastructure project by STREAM
- Read this letter to the editor for more background
- GCEDC must not add additional vulnerability to Genesee County residents' and farms' access to adequate, safe drinking water by hinging critical financing for infrastructural upgrades on STREAM and Apollo: who don't care about the interests of Genesee County

Sincerely,

Mary Agnello

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

We may never know what compels you to dedicate your entire lifeforce to a failing boondoggle yet there remains one thing we can all agree on: STAMP is the epitome of corruption, extraction, and sovereignty violation.

So much so that it even affects me, across the state, courtesy of the absurd electricity usage subsidies that will directly hike prices statewide. Truly an accomplishment in insensibility, yet a blessing that I now have reason to comment. But who really cares about me! I'm here to be a good albeit distant neighbor to the Tonawanda Seneca Nation. So as per the wisdom of Mark Masse: facts matter. And it is a fact that you continue to violate and insult their sovereignty, treaty rights, and continued existence itself.

As multiple Nation Members have already stated: Consequences don't respect borders. The STAMP site is located upstream and adjacent to the Tonawanda Seneca Nation's federally recognized Nation Territory. While we can again highlight the precarity of what still remains within the land such as the effects of climate collapse or how The Big Woods is vital to the entirety of the Haudenosaunee Confederacy for continuing their traditional, treaty protected, ways of life. I think it's also important to highlight the destruction that has already occurred. A sizable amount of land at the STAMP site has already been bulldozed and paved, and the land of Iroquois National Wildlife Refugee still bears the scars of the multiple drilling fluid spills. Too many which may be permanent.

While it's easy for some to claim that the damage resides entirely within the visible range, or some imagined outline. It doesn't take any fancy degrees to know that's not the reality. Fluids don't stay sedentary, asphalt doesn't only cover the soil from the eyes, noise isn't constrained by property lines. There will be a greater amount of damage than big tech or you claim, and you will not have the capacity to remediate it. Assuming anyone even has the integrity to investigate. I say that not with the intention of insult, but as the perspective from a town which not only has an amazon warehouse, but for many decades had our drinking water source poisoned by PFAs, and left to die by every level of power. And that's not the only environmental crisis affecting us. We may not be the Munsee Lenape, who yes are still around and whose unceded lands these here are, but we are no strangers to such shenanigans.

So who is more trustworthy? The Tonawanda Seneca who have been there living sustainably within the land for countless generations and I'm sure can guide you on how

to navigate things responsibly, or big tech billionaires who only view all of us as obstacles to their longtermism aspirations such as:
- Mark Zuckerburg: who for over a decade has been building a self sufficient underground bunker in the colony of Hawaii in anticipation of a rapture-like apocalypse.

- Elon Musk: who describes colonizing Mars as essential “for the long term survival of civilization”.
- Peter Thiel: who in 2009 wrote that he “no longer believes that freedom and democracy are compatible”, and in 2025 was unable to answer the question “you would prefer the human race to endure, right?”.
- Sam Altman: who said “Ai will probably lead to the end of the world but in the meantime there will be good companies.”.
Most if not all of whom are also documented in the Epstein files as having deep relationships with Epstein. From Zuckerburg attending lavish dinners, Musk pleading to go to Epstein’s island, and Thiel often discussing what Epstein himself dubbed “secret societies” and attempts at creating them.

Apollo Global Management’s leadership is no different. Founder Leon Black was a major if not main client. Other founder and current executive Marc Rowan was no different. Both maintained close relationships with Epstein, professionally and personally. Tax arrangements, the purchase of a private jet, the auction of an art collection, meeting for breakfast, planning family portraits. All after Epstein became a convicted sex offender. And as the surviving victims have explicitly said: it was impossible to not know the full extent of what Epstein was doing while remaining in such proximity.

For me the choice remains obvious. The respectful people who know what they are doing. The Tonawanda Seneca Nation, and in their own ways: the non-Native local residents. Both of whom I’ve heard voiced a plethora of great points at the March 19th public hearing. So if your priority remains local feedback, I suggest you listen to them instead of big tech billionaires who’s promises as well as presence are as vaporware as their data centers.

Furthermore, the entire Ai industry, and to it’s own extent the wider data center industry, is nothing but an ouroboros of farce cycles.
- Everything which is bought either does not exist. GPU’s that aren’t yet built, silicon wafers that are nowhere near becoming RAM due to the advanced nature of their manufacture, data centers that are barely even proposals, the list goes on.
- Every deal is agreed upon with letters of intent, thereby ensuring it is not a finalized deal and can easily be absconded from. A recent example is the OpenAI-Disney deal.

- There is never a plan to dispose of e-waste. The GPUs will die in under 5 years, the closed loop cooling water will be pumped with PFAs and anti-corrosive chemicals pumped. Yet the only solution the industry can muster is a flood of NDAs and misinformation to obscure the reality. Strategies illustrative of Silicon Valley's "move fast break things" philosophy.

- Already meager job numbers rarely materialize. Yet the few who do are massively underpaid imported temp workers. An extraction dynamic eerily similar to that of mining towns such as Solwezi and the entirety of West Papua.

So tell me, TELL THE TONAWANDA SENECA NATION AND LOCAL RESIDENTS, in what way does any of this create economic prosperity? In what way does this respect treaty rights? In what way will this lead to anything but a massive payout for yourselves, especially given the foundational conflict of interest you appear to have? I am sure they'd love to know.

Sincerely,

Zoe Tether

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I do not support the expansion of data centers in New York State while clean energy production and emission reduction goals are not being met. Projects like this must be postponed and reevaluated after the state is on track to meet its climate goals. And if allowed to move forward, they must be sited in areas closer to population centers, not adjacent to ecologically and culturally important natural areas.

Sincerely,

William Maier

Subject: Metro Justice STAMP Public Comment

To the Genesee County Economic Development Center (GCEDC):

My name is Carlton Huff, Organizer at Metro Justice. We are a multi-issue, grassroots group fighting for social, economic, and racial justice in the greater Rochester area.

We submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

Our organization is committed to the just implementation of the Climate Leadership and Community Protection Act. The proposed data center lies within a Disadvantaged Community, as designated by the Climate Justice Working Group, which subjects this project to review under the CLCPA. Per Section 7(3) of the law, in considering and issuing permits, licenses, and other administrative approvals and decisions, all state agencies, offices, authorities, and divisions shall not disproportionately burden Disadvantaged Communities. Given the threats posed by this project to the Tonawanda Seneca Nation which lies within this Disadvantaged Community, and our overarching respect for Indigenous sovereignty, we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of NYS Department of Environmental Conservations' recommendations with respect to the SEQR environmental review process, and call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts;

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public; and

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application

materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation. It threatens our Climate Law and violates the sovereignty and way of life of the Tonawanda Seneca Nation. Additionally, utility costs have contributed to a cost-of-living crisis in our area that will only be heightened by additional strain on the Monroe County Water Authority & electric grid.

In closing: we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of DEC's recommendations with respect to the SEQR environmental review process, and call on GCEDC to reject the incentives application from STREAM US Data Centers.

Sincerely,

Carlton Huff

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

We need energy affordability, now more than ever. Adding data centers to our grid is already making energy costs for all NYS residents go up, while letting big data off the hook, and it will only get worse, the more data centers we allow to connect to the grid. Please say no to data centers, and yes to the data center moratorium in NYS!

Sincerely,

streampublichearing@gcedc.com

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

We have all learned that the degree of water pollution that stems from these centers cooling machine is is massive as well as there is pollution it becomes the tax payers job to clean it up.

That is only one of many reasons this plan should be shut down because it would eventually poison everything pepple, wildlife. Plants, the entire environment around its site

Sincerely,

jacklyn Chapman

To: streampublichearing@gcedc.com
Subject: STREAM US Data Centers LLC Public Hearing

To the Genesee County Economic Development Center (GCEDC):

This comment is from Rochester Area Interfaith Climate Action (RAICA https://www.raica.net/). RAICA is a group of individuals and congregations that work to raise awareness in our congregations about the moral, spiritual dimensions of climate change, to build solidarity by amplifying the voices of communities most affected by climate change, and work toward making our own facilities models of sustainable building and landscaping practices.

We submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

RAICA remains committed to the just implementation of the Climate Leadership and Community Protection Act. The proposed data center lies within a Disadvantaged Community, as designated by the Climate Justice Working Group, which subjects this project to review under the CLCPA. Per Section 7(3) of the law, in considering and issuing permits, licenses, and other administrative approvals and decisions, all state agencies, offices, authorities, and divisions shall not disproportionately burden Disadvantaged Communities.

Given the threats posed by this project to the Tonawanda Seneca Nation which lies within this Disadvantaged Community, and our overarching respect for Indigenous sovereignty, we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of NYS Department of Environmental Conservations' recommendations with respect to the SEQR environmental review process, and call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on the data center proposed at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts;

5) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that construction is forecast to take at least five years;

6) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public; and

7) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

We are concerned that Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation. It also threatens our Climate Law and violates the sovereignty and way of life of the Tonawanda Seneca Nation.

We understand that Genesee County faces a severe and ongoing insufficiency of both water and water infrastructure and support using Monroe County Water Authority resources to address it. We are concerned however with linking vital water infrastructure with the success of a very questionable and yet-to-be-defined massive data center.

We thus oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of DEC's recommendations with respect to the SEQR environmental review process, and call on GCEDC to reject the incentives application from STREAM US Data Centers.

Sincerely,

John Keevert, Activism Team

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

- This project is a BAD investment for Genesee County, the GLOW Region, WNY, or NYS
- The data center complex would have a high direct and indirect cost. The requested subsidies would be among the largest ever awarded to an economic development project in NYS, and among the largest subsidy packages ever awarded to a data center project anywhere in the US

- It is unwise for Genesee County to invest in a hyperscale generative AI facility given the likelihood of an impending AI economic crash. Such an investment puts residents at risk of fallout from the shaky AI market and potential economic crash.
- Genesee County residents would pay the price while STREAM, Apollo, and the undisclosed Big Tech firm would profit
- The GCEDC needs to go back to the drawing board with residents to collectively envision a new path for economic development in the GLOW Region that finances and enables the amenities, services, and infrastructure that meets peoples' actual needs while providing protection from undue ecological and economic risk and harm

Sincerely,

Nathaniel Stern

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Please do not let this site go through. It will be a blight to this beautiful area and its wildlife!

Sincerely,

Paul Crawford

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I am glad that GCEDC plans to hold a supplemental public hearing on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has extended the written comment period. Additionally, I demand:

- The Board of Directors must be present at this hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal; and
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;

No. Just no. This plant in unwelcome in this community, as voiced by those attending AND certainly by the voiceless birds and wildlife living in proximation. The promise of local jobs is highly suspicious considering the objectives of this enterprise. Not here, not anywhere. Enough violation of our lived environment.

Sincerely,

Mary C Uebbing

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

You've seen the outpouring from the community for months now! The packed rooms, the signed petitions, this is something that as a community we wish to stop. It does not benefit us, but hinder us destroys the psychology in the environment in the land that's not yours giving $1 billion subsidy to a corporation does not help anyone in our community. Please stop the data center NOW!

Sincerely,

Shannon Coleman

Stop this insane plan of the data center at STAMP! The damage to the Seneca s, the pristine land surrounding the reservation, and that entire area that is home to wildlife. This area is part of a huge bird flyway route.

Governor Hochul, do the right thing and stop this. You've always had my vote, but you're losing me
Pamela Sander

Dear Governor Hochul,
Saddly, I am appalled and highly concerned at an email I am just seeing that you have passed funding for mega data center complex in Geneseo County.

And now the developer. is asking for over $1 billion in subsidies???? This is crazy!! These data centers are resource raiding & draining monstrosities and the benefits of these are highly speculative. The proof can

already be seen at other data centers and the greed is voracious!! The societal benefits of AI are speculative.! Lets review: this company is seeking astronomical financial subsidies from NYS when there are so many items for which the federal government has taken funding away from NYS.
This deal sounds exactly like a scammer is baiting you on how "rich" you'll become now that you just forked over $56million to their high tech project.: "Oh by the way, to get started on becoming super wealthy, we'll need $1.4 billion more for initiation into our "club".
Invest 1/10th of that money into solar infrastructure and we'll be so far ahead of the game in helping NY residents with what they need,; jobs, reduced cost of electricity and clean, clean energy that will not strip our state of precious resources. With all due respect Governor Hochul, what are you thinking???

Sincerely,

Leslie Nestor

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

We don't want AI - we don't want our drinking water taken away!!

Sincerely,

Mary Pestlin

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I am glad that GCEDC plans to hold a supplemental public hearing on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has extended the written comment period. Additionally, I demand:

- The Board of Directors must be present at this hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal; and
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;

Sincerely,

Alyssa Beuler

Sent: Wednesday, April 1, 2026 5:47 PM
To: streampublichearing@gcedc.com
Subject: STAMP mega industrial site in Alabama, NY

To the Genesee County Economic Development Center (GCEDC):

My name is Margaret Gabraith, President of Transition Town Port Washington. We are a community driven nonprofit that educates, advocates, and acts to protect the natural habitats and waterways of the Port Washington Peninsula.

We submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

Our organization is committed to the just implementation of the Climate Leadership and Community Protection Act. The proposed data center lies within a Disadvantaged Community, as designated by the Climate Justice Working Group, which subjects this project to review under the CLCPA. Per Section 7(3) of the law, in considering and issuing permits, licenses, and other administrative approvals and decisions, all state agencies, offices, authorities, and divisions shall not disproportionately burden Disadvantaged Communities. Given the threats posed by this project to the Tonawanda Seneca Nation which lies within this Disadvantaged Community, and our overarching respect for Indigenous sovereignty, we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of NYS Department of Environmental Conservations' recommendations with respect to the SEQR environmental review process, and call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts;

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public; and

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation. It also threatens our Climate Law and violates the sovereignty and way of life of the Tonawanda Seneca Nation.

In closing: we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of DEC's recommendations with respect to the SEQR environmental review process, and call on GCEDC to reject the incentives application from STREAM US Data Centers.

Sincerely,

Margaret Galbraith

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Why don't they look at other large areas, for instance the area in Buffalo where the steel,plant was. There is no one around that area and the city is always looking for any kind of new businesses. That land cannot be built on for residential due to the steel industry. Those data centers can make all the noise they want. There are also many places in the U.S. that do not want, and are against the data centers. What part of they are not wanted, or needed, do they not understand? They are not going to be a benefit to the community, and will be obsolete in 7-10 years.

Sincerely,

Dolores Bruner-Uebelhoer

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I tried to speak at the recent hearing at the Alabama Fire Hall, but I had to leave. I have since sent two comments in opposition. This comment is different. I'd like to offer some ideas for positive, income-generating development(s) at the STAMP site that would be welcomed and supported by the region and the community.
- A LaCrosse venue built well enough to attract wider competitions
- A Nature Center linked to the National Wildlife Refuge

- A flea market complex such as that found on Rte 20 A just east of East Aurora
- A Native American Museum
- Restaurants, shops, things that make this a destination point for a days' worth of activities, especially when combined with visiting the Refuge

Maybe none of these ideas impresses you - but I urge you to THINK OUTSIDE THE BOX, THINK CREATIVELY, THINK IN HARMONY with the region, not in opposition. Think of ways to move forward with development that are compatible with what's already there, not destructive.

Sincerely,

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I ask you to do your homework.
1. Data centers all over the country are causing power costs to go up. Even when projects purport to build their own power source, the existing infrastructure must be upgraded and those costs are inevitable handed down to all customers, so that all electric users in the region wind up subsidizing the project.

2. The noise problem is REAL and omni-present. The precious wildlife preserved in our region will be disastrously impacted, and even though you may only pretend to care about that, the INCOME generated to the region from people who travel to the refuge(s) will be lost. This is about MONEY and the loss thereof.
3. Few jobs will be generated, and (again) all of the country over time, even these few jobs are diminished in number. What is NOW 11.7 million PER JOB in tax abatement requests will be even worse in very short order.
I could go on and on, but there simply is NO good reason to advance this project in this place at this time other than one of the oldest motives of all time: GREED.
PLEASE do you homework and do what's right for our region. Say NO to the data center project.

Sincerely,

streampublichearing@gcedc.com

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Dear Genesee County Regional Development Center Officials:

New York has always been Pro-environment, pro- preservation of Indigenous cultures and a very strong state that protects the rights of its' citizens to have the best Quality of life.
The construction of this humongous data center will destroy natural forested areas and also create a demand for more energy usage. This excessive need for energy will stress the Grid in the area and local residents and the Tonawanda Seneca Nation will experience more blackouts and interruptions of service. The demand for more water and electricity will exceed that which is available in the area.

This is not the recommended use of natural resources.
By depleting the area of Electricity and water, local residents will be forced to pay higher prices for energy and water usage.
Additionally, the construction of this Mega- Warehouse will not employ enough local residents to make this construction feasible.
How many acres of forests and fields will be destroyed to accommodate this struct

Sincerely,

Joyce Caracci

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I think the STAMP project is a big problem to my generation and the future generations because the chemicals that there releasing are killing indigenous plants to the area and could harm the people as well, and with the all the sound from the data centers would disturb the wildlife and people living near by, the chemicals that they would release could be released into the soil and wells that we use for our water.

Sincerely,

rihanna dockstader

Subject: GCEDC must extend the deadline for data center comments.

Dear GCEDC Board of Directors,

I am glad that GCEDC plans to hold a supplemental public hearing on the proposal from STREAM US Data Centers and Apollo Global Management for a 2.2 million square foot / 500 MW data center complex, for which they are asking $1.46 billion in subsidies, and has extended the written comment period. Additionally, I demand:

- The Board of Directors must be present at this hearings;
- GCEDC and STREAM must publicly answer questions from the public about the data center proposal; and
- Given that GCEDC's own staff and consultants have flagged numerous inconsistencies and gaps in STREAM's application materials, GCEDC must ensure both that final application documents, once submitted by STREAM, are provided to the public, and that the public then has the opportunity to comment, before the Board makes any decision on this application, financial, environmental, or otherwise;

Do not allow this data center to be built. It will disrupt a unique and fragile ecosystem, will create constant noise and light only 400 feet from the Tonawanda-Seneca Reservation, will require vast amounts of electricity, and the developers ask for a $145 Billion tax abatement. Creation of this data center will degrade life in this part of New York State at the taxpayers' expense.

Sincerely,

Amy Troy

Subject: Re: Batavia High School and Pembroke High School

Hi!

I wanted to follow up regarding the Football Shirts for Batavia High School and Basketball Shirts for Pembroke High School.

Your business would be highlighted on 100 shirts per school. For Batavia High School, the t-shirts will be thrown out into the crowds at the Home Football Games! For Pembroke High School, the t-shirts will be given to the Basketball Players and thrown out into the crowds at the Basketball Games!

Businesses like yours help make the shirts possible, and in return your brand is seen by students and local families throughout the season. All of our products are at no expense for the school.

We're collaborating directly with Alex Veltz, the Football Coach at Batavia High School and Matt Shay, the Boys Basketball Coach at Pembroke High School. Only a select number of local businesses will be featured.

Nothing is due for 30 days. If you could please reply and let me know either way, I would really appreciate it.

Here are the t-shirt ad sizes that are most popular:
***PREMIUM BANNER** (12" x 3.5") for only $1,275
***BANNER** (12" x 1.75") for only $690
***EXCLUSIVE SLEEVE** (4" x 3.5") for only $690
***BLOCK** (4" x 3.5") for only $450
***HANG TAG** (2" x 3.5") for only $355
***SIX INCH** (6" x 1.75") for only $349
***FOUR INCH** (4" x 1.75") for only $295
****Prices are per school**
***See our website at https://shirts.wehelpschools.com/project/**

If you want to respond via email, this is the info I will need for you to sign up:
*School Name(s):
*Business Name:
*Contact First & Last Name:
*Contact Title at Company (i.e. owner, manager, etc.):
*Contact Email:
*Business Phone Number for Ad:
*Contact Phone Number (if different):
*Public Address for Ad:
*Billing/Shipping Address (if different):

*Ad Size & Price:
*T-shirt Size:
*Logo Attached (Yes/No):
We will send you complimentary shirt just to say thank you for all of the support!

A lot of businesses like to increase their exposure. Here are some of the other schools we are working with:

- Caledonia-Mumford High School (Fall Sports Posters)
- Churchville Chili High School (Spirit Shirts)
- Letchworth Central High School (Spirit Shirts)
- Pavilion Central High School (Fall Sports Posters)

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Sincerely,

Nathan Lomayestewa Jr.

Subject: FMCE's public comments on STREAM US Data Centers' proposal at STAMP in Alabama, NY (sent 4/1/2026; deadline 4/15/2026)
Attachments: FMCE Letter rejecting STREAM at STAMP-Sent2026Mar31.pdf

Dear GCEDC Board Members,

Please see our attached public comments on the STREAM US Data Centers' proposal and the requested $1.46B tax subsidy at STAMP in Alabama, NY (sent 4/1/2026; deadline 4/15/2026).

The Federation of Monroe County Environmentalists in the Rochester NY region asks you to reject the proposal by STREAM US Data Centers and Apollo Global Management and ensure that any proposal accepted for development at STAMP follows all requirements set forth by the NYS Department of Environmental Conservation.

There should **be zero public subsidies** for a project that will cost us all. There should be no approval for a massive development project that is incompatible with this location among publicly preserved and supported wildlife refuges, nature preserves, and significant watersheds, next to the sovereign Tonawanda Seneca Nation, and far from existing water and energy infrastructure. The drastic increase in demand by this one development project will stress our regional energy and water resources and the build-out for this will inevitably raise our utility rates across Upstate NY.

Exposing the nearby rural residents, including members of the sovereign Tonawanda Seneca Nation to potentially unhealthy levels of sound, vibration, generator fumes, and traffic, and the deterioration of quality of life is not acceptable. Profit and 125 jobs do not justify the negative impacts on neighbors, the ecosystem and future generations.

We ask GCEDC to analyze this proposed project with the serious study that our region deserves. Conduct a site-wide Supplemental EIS, and a full SEQR review with a detailed impacts analysis of the proposed data center project, and leading up to that, provide all studies and application materials to the public for review and to provide input at a public hearing.

Respectfully,

Sally Howard, Carol Hinkelman, Kate Kremer, Jonathan Cloud and Victoria Zelin-Cloud
