Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

The GCEDC standing to gain 145m in fees for taking on STREAM is a massive conflict of interest.

Apollo Global Management is an amoral company. This technology will be used in amoral ways.
This project must be stopped

Sincerely,

streampublichearing@gcedc.com

Attachments: Maddy Nyblade - April 16.docx

Hello Genesee County Economic Development Center (GCEDC),

My name is Peter King, and I am a resident of Syracuse in Onondaga Co., NY, 13224.
I am commenting here on the proposed Stream Data Center, even though **I am not a local resident immediately impacted by this proposal.**
I have no connections with this project, nor with anyone living in Genesee County, besides briefly meeting some members of the Tonawanda Seneca Nation and other local residents.

I understand this project is planned as a hyper-scale data center complex used for generative AI.
As such, I find the ***increased energy demand*** for this project a most concerning impact.
Given the named electric demand only of 500 MW, and assuming a full 24 / 7 operation, this facility will use about 4,380,000 MWh electricity annually. Compared with New York State's total electric usage in 2024 of 140,497,501 MWh, this Stream center will use about 3 % of NYS's total electric demand (U.S.Energy Info Administration). This energy use will also be competing with, the Micron Semiconductor Project being constructed in the Town of Clay, Onondaga County, expected to use about 11% of NYS electric energy demand.
The New York Independent System Operator (NYISO) have recently raised concern in 2025 about new, large interconnection requests submitted to their que, mostly for data centers (NYISO Blog, Aug.26, 2025). At that time, NYISO estimated an increase of 2,500 MW to 4,000 MW, or 15% <> 25% over NYS's total 2024 electric usage by 2035, assuming these data centers operate 24 / 7 (Ibid). However, more recent estimates suggest higher cumulative electric demand increases to 7,000 MW by 2030, a 43.6% increase over 2024 by 2030 (Semlyen Mar.25, 2026, Stachniak 2026). NYS may well follow the lead of Maine and enact a moratorium on data centers, until we can find enough sustainable energy supply. Otherwise, this added electric demand alone constitutes an "unfunded mandate" on all NYS electric utility ratepayers.
Furthermore, recent news suggests, when local electric grids cannot supply data center power needs, many plants are simply burning fossil fuel behind the meter to compensate (Sadasivam & Bittle 2026). Given this 'Stream' proposal includes a set of backup generators which will burn 114,000 gallons of diesel fuel per year, this does not bode well for local air quality for Genesee Co. residents, nor for NY State's Climate goals. I am especially recalling here, the wildfire smoke transported from Canada in recent years, which produced the singular worst air pollution episodes measured in NYS. I see no plan in this proposal for addressing potential wildfire smoke episodes in Western NY.

Water Concerns.

I am also concerned about the water impacts from this project. I have reviewed comments and analysis on the Stream Center's possible water flows submitted by Dr. Madeline Nyblade, Ph.D. for a Town of Alabama Public Hearing, on April 15, 2026 (attached here). I agree with Dr. Nyblade's conclusions, that the stormwater plans submitted for this Stream project are inadequate, and questionable in accuracy.

As with the air emissions, I agree with Dr. Nyblade's assessment that these water flows are not predictable. Recent rain and snow extremes are already having drastic effects on NYS wetlands. This impact is evident especially on lands with some known risk from karst geology, for example in the area around Oak Orchard Creek and Tonawanda Creek (Czymmek, et al 2011, Reddy and Kappel 2010).

I agree furthermore with Dr. Nyblade, the Tonawanda Seneca Nation has not been meaningfully consulted on this project. I am alarmed learning that when the STAMP Park attempted horizontal drilling through the Iroquois National Wildlife Refuge in 2024 for inserting a industrial wastewater pipeline, at least five separate toxic spills resulted (Roberts, 2024). "...the fluid contained hazardous waste as well as arsenic, barium, cadmium, lead, acetone, pyrene, and phthalates." (Ibid).

Overall for **the above stated reasons,** and for the **massive sales tax giveaway producing so few jobs,** I oppose approving this Stream Data Center as so far proposed. **The Genesee County Economic Development Center (GCEDC) appears to have a conflict of interest,** given the minimum of $145.9 million in fees this agreement would produce.

Thank you,
Peter King,
Syracuse NY, 13224

NYSDEC Additional SEQR Lead Agency Coordination Comments:

Please note that DEC just received on January 26, 2026, additional documentation related to Project Double Reed sent via link in a Weekly STAMP Update email, which DEC needs an opportunity to review. DEC reserves the right to supplement or revise any comments herein upon completion of our review of that submission or any other documents received thereafter, such as documentation related to the northern campus.

DEC has reviewed the information received on December 29, 2025, regarding the lead agency coordination for Project Double Reed, located on two separate parcels at the WNY STAMP site. Project Double Reed would consist of the construction of three two-story data center buildings totaling approximately 2.2 million square feet across approximately 90 acres and infrastructure improvements to support them. The three data centers would use a total of 500 megawatts of electricity per year. An additional 40 acres of the STAMP site (one area adjacent to the Edwards facility and one area to the north of the Plug Power site) would be utilized as temporary construction/logistics areas. Please find the following comments for the project.

SEQR Coordination and Establishment of Lead Agency

DEC does not object to GCEDC being reestablished as SEQR lead agency for the environmental review of this action. Based on the project information submitted and representations made by GCEDC, DEC is likely not an involved agency for the Double Reed project; however, DEC requires additional project information and formal applications/submissions before a final determination can be made on any potential regulatory or permitting authority. In any event, DEC is an interested agency under SEQR for the Double Reed project.

DEC recommends a supplemental Environmental Impact Statement (SEIS) be prepared for data centers as their impacts do not appear to have been adequately addressed in GCEDC's 2012 GEIS or its subsequent updates, which should be published on a publicly available website, in accordance with 6 NYCRR 617.12(c)(5). The Department also recommends that a supplemental EIS be prepared for the STAMP site to address new laws and regulations (such as the Environmental Justice Siting Law and the revised 6 NYCRR Part 664 Freshwater Wetlands Regulations) and to evaluate updates to the STAMP Site, its goals, its tenants, and any other originally unanticipated changes in how the STAMP Site is being developed.

Whether or not GCEDC prepares a supplemental GEIS for the Double Reed project, at a minimum, DEC recommends that a new SEQR Full Environmental Assessment Form (FEAF) be completed for Project Double Reed using the updated draft FEAF, which contains questions to help evaluate the impact projects will have on Disadvantaged Communities. A link to the draft FEAF and additional guidance documents can be found on our website here: https://dec.ny.gov/regulatory/regulations/proposed-emergency-recently-adopted-regulations/state-environmental-quality-review-act-regulatory-revisions.

While the form has not been finalized, the legislative amendments to SEQR incorporating the Environmental Justice Siting Law are in effect. Therefore, it would be prudent of GCEDC to complete the draft forms that incorporate questions that implement the Environmental Justice Siting Law.

As stated above, DEC recommends that a supplemental EIS should be prepared for the Double Reed project for the following reasons:

- The proposed data centers are at or above the maximum buildable acreage and building area referenced in the 2012 DEIS.
- The 2012 GEIS did not consider potential impacts to Disadvantaged Communities, which is required by the Environmental Justice Siting Law.
- One of the economic benefits identified in the original GEIS was that the STAMP site would support over 9,000 full-time equivalent jobs at full build-out and occupancy. GCEDC should evaluate how a facility that will utilize 130 acres (90 acres of permanent disturbance and 40 acres of temporary disturbance), which is more than 20% of the 618.18 acres of buildable STAMP site area but only support 120 jobs, helps achieve the economic benefit of providing 9,000 jobs at full build-out.

DEC also recommends GCEDC prepare a detailed construction impact analysis and a detailed data center operations impact analysis as part of the SEQR review. DEC also notes that the results of the noise analysis conducted for Project Double Reed must be considered prior to a SEQR determination being made. In addition, a single tenant using 500 MW of the STAMP site's energy allocation is likely to limit the development of the STAMP site.

DEC received a link to additional information related to the southern campus data center on January 26, 2026. As a reminder, DEC does not consider documents sent in the Weekly STAMP Update emails to be formal submissions to the DEC. The documentation and the Weekly STAMP Update email transmitting that documentation contained inconsistencies with the information contained in the FEAF for the Double Reed project. For example, please note the following:

- The FEAF lists the total sanitary wastewater discharge as 20,000 GPD
    - The Weekly STAMP Update email lists the total sanitary wastewater discharge as 10,000 GPD
    - The BUFA Stream South Engineers Report document lists the sanitary wastewater discharge as 3,150 GPD
- The FEAF lists the building height as 110'
    - The building height listed in the BUFA Civil Permitting Plans is 56'

Biotic Communities/Endangered and Threatened Species of Flora and Fauna

DEC has reviewed the available information in the New York State Natural Heritage Program databases for known occurrences of federally-listed or proposed endangered or threatened species; state-listed endangered, threatened or rare animal and plant species; significant natural communities; and other significant habitats. Some occurrences were found in the vicinity of the project site; however, an existing 6 NYCRR Part 182 Incidental Take permit, 8-1820-00032/00003, covers the buildable area of the STAMP Site (approximately 665 acres) for the incidental take of short eared owl (*Asio flammeus*) and northern harrier (*Circus hudsonius*). There are no other species occurrences at this location, so no additional permits for endangered or threatened species will be required for this project.

Article 15 Protection of Waters

The streams in the project area have a NYS Stream Classification of Class C and are therefore not considered NYS protected water bodies. A determination has been made that the streams would not be considered navigable as defined in the Protection of Water Regulations (6 NYCRR Part 608). As these sections of stream are not navigable or protected, disturbance of the stream's channels and banks will not require an Environmental Conservation Law (ECL) Article 15 permit from the DEC. However, your project may be subject to Federal regulations. You should contact the United States Army Corps of Engineers (Corps) at the Buffalo District Office, 478 Main St., Buffalo, New York 14202. They can also be reached by phone at (716) 879-4330. Regardless of whether a permit is required, standard sedimentation and erosion controls should be employed to avoid contravention of water quality standards.

Article 24 NYS Freshwater Wetlands

Portions of New York State regulated freshwater wetlands and their adjacent areas may be located within the STAMP site. As set forth in the Department’s June 11, 2025, letter, pursuant to 6 NYCRR Part 664.1(d), the revised Part 664 Freshwater Wetlands Jurisdiction and Classification regulations are not applicable to on-site disturbances on the STAMP site until January 1, 2027, for projects determined to be minor in accordance with 6 NYCRR Part 621, or July 1, 2028, for projects determined to be major in accordance with 6 NYCRR Part 621.

Any construction activities for Project Double Reed that will extend beyond either of the above dates will need to be evaluated for potential wetland impacts to determine if a freshwater wetland permit will be required. It should be noted that a high percentage of the soils present on the STAMP site are mapped as poorly drained, so a resurgence of wetlands is possible.

Federal Wetlands

While the Department asserts jurisdiction over NYS regulated freshwater wetlands, the Corps regulates federally protected wetlands. As noted above, for questions regarding federal wetlands, and the federal permitting process, contact the Corps at: Chief, Regulatory Branch, U. S. Army Corps of Engineers, Buffalo District, 478 Main St., Buffalo, New York 14202 or (716) 879-4330.

Section 401 Water Quality Certification (WQC)

Work in certain waters and wetlands of the United States may require a permit from the Corps. If a Corps permit is required, the Corps may request that the DEC make a determination (Water Quality Certification, pursuant to Section 401 of the Federal Clean Water Act) that discharges from the proposed activities, for which an applicant is seeking a Corps permit approval, will comply with the applicable effluent limitations, water quality standards, and any other applicable requirements of State law.

Documentation in support of a 401 Water Quality Certification would include demonstration of compliance with either the Department's State Pollutant Discharge Elimination System (SPDES) General Permit for Stormwater Discharges from Construction Activities (GP-0-25-001) or the Municipal Separate Storm Sewer System (MS4) permit. This documentation would include submission of a completed Notice of Intent and, in an MS4 area, a copy of the local municipality's approved MS4 Stormwater Pollution Prevention Plan (SWPPP) Acceptance Form as part of a complete application. The actual SWPPP could also be required to be submitted to the Department depending on the project.

Stormwater General Permit – Construction

This project will need to be compliant with the SPDES General Permit for Stormwater Discharges from Construction Activities (GP-0-25-001). Construction activities that involve one acre or more of land disturbance must obtain SPDES stormwater permit coverage through either an individual permit or GP-0-25-001. To obtain authorization under GP-0-25-001, a Stormwater Pollution Prevention Plan (SWPPP) must be prepared in accordance with all applicable requirements of GP-0-25-001 and a completed Notice of Intent (NOI) form must be submitted to the Department.

An owner or operator of a construction activity that is subject to the requirements of a regulated, traditional land use control MS4 must first prepare a SWPPP in accordance with all applicable requirements of GP-0-25-001 and then have its SWPPP reviewed and accepted by the regulated, traditional land use control MS4 prior to submitting the NOI to the Department. The owner or operator must then submit the signed “MS4 SWPPP Acceptance” form along with a completed NOI to the Department. For additional information on the Department’s stormwater program please visit the following webpage: https://dec.ny.gov/environmental-protection/water/water-quality/stormwater/construction-activity-permit

State Pollution Discharge Elimination System (SPDES)

The Department's understanding is that all sanitary wastewater discharges from this project will be handled by STAMP Sewer Works and conveyed via pipeline to the Village of Oakfield wastewater treatment plant (WWTP), and that there will be no industrial wastewater discharges from the project. As such, no individual SPDES permit will be required for the Project Double Reed project.

However, any direct discharges from the project to surface or groundwater will be subject to SPDES permitting. In addition, any proposed industrial discharges to the Village of Oakfield WWTP would require a modification of their SPDES permit.

The Department also notes that it would be atypical for 120 employees to use 20,000 gallons of water per day and to create 20,000 gallons of sanitary wastewater per day. If wastewater is generated from cooling, air conditioning, or similar purposes, this constitutes an industrial discharge. As noted above, this requires a modification to the Village of Oakfield SPDES permit.

Air

Air permitting requirements are found in 6 NYCRR Part 201 and on our website at https://www.dec.ny.gov/chemical/8569.html.

The proposed project includes twelve diesel-fired emergency engines that would be certified to meet EPA Tier 2 emissions standards. To minimize air emissions from the proposed project, DEC recommends the applicant evaluate the use of generators certified to EPA Tier 4f emissions standards as an alternative to the currently proposed generators.

Without additional information, the Department is unable to confirm whether Project Double Reed would require an air facility registration or an air state facility permit.

As part of DEC's review for air permits, the Climate Leadership and Community Protection Act (CLCPA), which became effective January 1, 2020, directs state agencies to determine if the decisions they make are consistent with the attainment of the statewide greenhouse gas (GHG) emissions reductions established in ECL Article 75. In the case of the DEC, this includes determining if permits issued are consistent with or would interfere with the attainment of the established statewide GHG emissions levels. Depending on the additional information received for potential air permitting purposes, the applicant may need to prepare a CLCPA analysis as discussed in the Department's DAR-21 guidance.

Bulk Storage of Petroleum/Chemicals

The storage of certain chemicals, petroleum products and/or hazardous materials for 180 days or more will require registration and compliance with the Petroleum Bulk

Storage Program (6 NYCRR section 613-1.3(as)). For more information, visit https://dec.ny.gov/environmental-protection/hazardous-substance-bulk-storage/forms-instructions.

Historic, Architectural, Archeological, and Cultural Resources

The FEAF indicated that Phase 1 through 3 archaeological survey and data recovery work has been completed for the proposed project site and adjacent areas. Initial Assessments as required by the LOR must be reviewed by the DEC prior to consulting with the New York State Office of Parks, Recreation and Historic Preservation (OPRHP) to receive an effect letter for the proposed project. DEC strongly recommends that the lead agency or applicant receive an effect letter prior to GCEDC making a SEQR determination for the Project Double Reed project.

OPRHP and DEC will continue consultation with Tonawanda Seneca Nation (TSN) regarding cultural resources, environmental impacts, and environmental justice per the March 23, 2021, Letter of Resolution (LOR), in accordance with CP-29 and CP-42 (see Stipulation 3: Consultation and Environmental Justice) and June 28, 2024, Interim Initial Assessment Expectations. If the proposed project requires an individual permit from the Corps, the Corps will implement the Programmatic Agreement.

Even when all appropriate archaeological surveys have been completed for a project site, unanticipated discoveries of cultural resources or human remains can occur during construction. DEC recommends creating an Unanticipated Discovery Plan to establish a clear process to follow in the event of an unanticipated discovery during construction. In addition, DEC requests that TSN be given the opportunity to have monitors on site during ground-disturbing construction activities or excavation. TSN and DEC should be notified 2 weeks in advance to provide time for adequate preparation and coordination.

Submittal and review timeframes should exclude all federal holidays, as well as TSN ceremonies that fall within the review period.

In accordance with the LOR, the applicant must prepare an Initial Assessment (IA) of each element of the STAMP project to evaluate whether or not it will have an adverse impact to the Tonawanda Seneca Nation's Territory as a property of religious and cultural significance. The IA must contain sufficient information and justification to help guide the Department's and OPRHP's evaluation of potential adverse impacts.

Environmental Justice and Disadvantaged Communities

The STAMP site is located adjacent to the TSN territory, which is designated as a potential environmental justice area (PEJA), and is subject to the Commissioner's Policy regarding Environmental Justice and Permitting (CP-29). Permitting for certain Major projects, as defined in the Policy, must be in compliance with CP-29 and may require additional outreach to impacted communities. Additionally, depending on what permits are needed, the requirements of the Environmental Justice Siting Law may also apply.

In addition to the project being adjacent to an Environmental Justice area, it is also in a Disadvantaged Community, as designated by the Climate Justice Working Group (CJWG), which subjects this project to review under the CLCPA. Per Section 7(3) of the CLCPA, in considering and issuing permits, license, and other administrative approvals and decisions, all state agencies, offices, authorities, and divisions shall not disproportionately burden Disadvantaged Communities. Additionally, state agencies, offices, authorities, and divisions shall prioritize reductions of greenhouse gas emissions and co-pollutants in Disadvantaged Communities. DEC Program Policy DEP 24-1 outlines the process for permit applications associated with sources and activities in or likely to affect a DAC. If the project involves certain activities or requires any of the permit types listed in the Policy, DEP 24-1 may apply.

Invasive Species Recommendations

To minimize the spread of invasive species during construction, consider the following best management practices (BMPs):

- Clean all construction equipment of mud, seeds, vegetation, and other debris as you move from one area to another.
- Excavate topsoil separately from subsoil for appropriate backfilling.
- Return all ground disturbance to pre-construction conditions and stabilize disturbed areas with seeding and mulch as soon as possible.

Please be advised that the project is still subject to any other necessary federal, state, or local permits and approvals. In the case that the project scope or location changes, please contact us so that we may reevaluate this determination. State regulations applicable to the location subject to this determination are occasionally revised and you should verify the need for permits if the project is delayed or postponed. This determination regarding the need for permits is effective as of the date hereof.

Public Hearing Statement STAMP / STREAM US Data Centers (Project Double Reed) Town of Alabama Public Hearing – April 15, 2026 Submitted by: Dr. Madeline Nyblade, Ph.D.

The views expressed in this statement are my own personal and professional opinions and do not represent SUNY College of Environmental Science and Forestry or any other institution.

My name is Dr. Madeline Nyblade. I am a hydrologist and researcher who has conducted independent analysis of the flooding, wetland, and stormwater impacts of development at STAMP. I am submitting these comments in my personal capacity as a scientist, not on behalf of any institution.

All stormwater from both proposed data center campuses flows downstream onto Tonawanda Seneca Nation territory, through the Tonawanda Wildlife Management Area, and into the Iroquois National Wildlife Refuge. Approximately 351.6 acres of wetlands on Nation lands receive surface water directly from STAMP. The Nation has not been meaningfully consulted.

The stormwater plans submitted for this project were not adequate. NYSDEC reviewed them in February and identified more than 20 significant deficiencies. Drainage maps did not match actual site conditions. The rainfall modeling methodology did not meet state standards and was replaced entirely. Three stormwater basins were modeled to fail during major storm events and had to be redesigned. The wrong sediment controls were specified throughout the plans. These are not paperwork problems. These are fundamental flaws in a system meant to protect downstream water quality — including the Nation's waters.

The existing stormwater basin at the South Campus — inherited from the prior Plug Power project and proposed to be retained without assessment — appears orange in satellite imagery. There is no inspection record, no performance data, and no water quality sampling in the submitted documents to confirm it is functioning or explain why the water present is orange.

Wetlands have not been properly evaluated. The applicants' own documents state that infiltration testing confirmed poorly draining soils and that perched water tables are likely present seasonally above an impermeable clay layer. The USDA Web Soil Survey maps poorly drained soils across both parcels. Satellite imagery shows wet areas on site. Yet neither plan documents a wetland jurisdictional determination as required under New York's regulations that took effect January 1, 2025. My independent analysis finds wetland presence on this site to be likely. Vernal pools — which are common on surrounding lands and for which the site conditions are suitable — were never screened for at all.

The flow direction of this site's stormwater remains scientifically unresolved. USGS stream mapping and the National Hydrography Dataset show these waterways draining toward Oak Orchard Creek — not Tonawanda Creek as NYSDEC and the applicant now assert. Which way the water flows determines which communities bear the risk and which water quality standards apply.

NYSDEC has not issued permit coverage. The regulatory process is not complete. Taxpayer money should not subsidize a project with unresolved water quality violations, an unevaluated wetland record, and undocumented downstream impacts on sovereign Nation lands.

I oppose the financial incentives request submitted by STREAM US Data Centers. I demand that GCEDC follow all of NYSDEC's recommendations, a proper wetland determination be conducted, and the Tonawanda Seneca Nation be meaningfully consulted. And I call on GCEDC to reject the incentives application from STREAM US Data Centers.

Thank you.

Dr. Madeline Nyblade, Ph.D. Submitted in personal capacity. The views expressed herein are solely my own and do not represent SUNY College of Environmental Science and Forestry or any other institution.

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

I did not move here to only to be subjected to higher electric rates, tanking property value, and diminishing quality of life.

As a resident I vehemently oppose this.

Sincerely,

streampublichearing@gcedc.com

Are we really going to clear cut wetlands for a 90 acre that is going to employ 100 people and is going to raise energy costs for every citizen in the area???????

You realize cutting up a wetland and crowding out the native people is like one of the most evil thing you can do??

The noise is going to fuck up the wildlife. Obviously.

What I am truly worried about though, is the alarming trend of people burning down warehouse and data centers. If someone starts a fire that harms the ecosystem, that is 1000% on the data center and the people who okayed it for putting it such a fucking stupid spot knowing the risks.

All of the good blue states are putting a moratorium on data centers for at least a year, we should be doing that AT MINIMUM.

A curse upon anyone who votes for this thing, you're evil stupid or both.

Sincerely,

Jordan Reed

Subject: STREAM US Data Centers LLC Public Hearing

To whom it may concern,

My name is Gabriel Hart. I am a PhD student at the University of Rochester studying computer science, and a lifelong amateur astronomer. I am writing because I believe that the light pollution analysis performed for the proposed data center project is incomplete.

Light pollution affects not just amateur astronomy, but also migratory birds, many of which pass through the nearby Iroquois National Wildlife Refuge. Bright lights can also negatively impact people living near the facility, and the light dome visible at night constitutes an aesthetic impact visible from much further away than the buildings themselves.

In the response to comment 3.F.1 submitted by the applicant on April 06, the applicant states that in their photometric analysis, "All property lines - and the areas 20 feet beyond them - consistently show 0.0 foot-candles." I was not able to find any discussion in the photometric plan of the methods used to conduct this analysis. However, based on their finding of 0.0fc of illumination this close to the facility, I can only assume that these computations are for direct illumination by installed light sources, and do not account for reflected light.

All artificial light sources, including the International Dark Sky Association (IDA) approved fixtures mentioned in the proposal, contribute to light pollution. Light from downward facing fixtures reflects off the ground and other surfaces back into the sky. In a dark, rural area such as the STAMP site, the light dome of large commercial or industrial facilities can be visible from miles away.

I believe that the following steps should be taken to remedy the deficiencies in the current light pollution impact analysis:

1. Include nighttime renderings of the facility in the Visual Impact Technical Summary, under both cloudy and clear skies.
2. Estimate the impact on zenith sky quality meter (SQM) readings at different distances from the facility.
3. Investigate any potential impact of the light pollution source on migratory birds passing through the wildlife refuge.
4. Explain the methods used to conduct the photometric analysis and produce the visual renderings.

I would like to stress the importance of the last point. For the GCEDC and the public to be able to meaningfully evaluate technical claims, results must be accompanied by an explanation of how they were obtained. Real science requires being transparent about methods. Otherwise, it's just advertising.

Sincerely,
Gabriel Hart

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

In addition to the comments above, I want to emphasize my concern that through this project, GCEDC and Stream have released the information to the public and the Tonawanda Seneca Nation at a pace that is more strategic than collaborative. Consistently when concerns are raised, they have been meet with dismissal or "wait and see". This has eroded the trust necessary for public forums to be anything but confrontational. I am struggling to understand the narrow vision and goals GCEDC has for STAMP. It appear to me that the goals in sight are Revenue and Job creation.

The revenue is not all or nothing, especially in light of the 1.4 billion dollars in tax abatements. Think about 11.6 million dollars per permanent job. It is a well established pattern of minimum wage workers having their livelihood subsidized to meet basic needs in order to maintain the profitability of corporations. Even in the context to meet basic needs, this is widely debated in our political life. HOW LUDACRIS to entertain essentially subsidizing these jobs at this rate. Even if adding in the construction jobs: Stream can afford to pay workers not just livable wages- but competitive ones. There is no justification to offer them any tax abatements. While we are here- PILOT payments set for 30 years provides economic security to the community variable that is most likely to create disruption for local home owners. Even if they pay 15% above the market assessment, it reduces uncertainty for the company and shifts the risk to the other taxpayers. While the town budget may vary and the market may shift- everyone else will be along for the ride while Stream cruises along. It also positions them to be that much more attractive in selling if their profits deplete in half this time. Apart from the taxes, the demand on the grid will increase rates for all- even if they pay for added infrastructure, even if they pay taxes. They need to produce their own power. It is a massive amount of output on the grid that will need to supply that demand over time. That infrastructure will need to be maintained over time- not just incrementally. I reject the financial incentives wholly and unequivocally.

Furthermore, I deeply believe that the costs and benefits can not be simply reduced to dollars. In a world where sacredness is increasingly scarce- I ask you to pause and consider the things in your life that you would never trade, risk or, sell for anything. What is the legacy you will feel proud to have your name on in the end?

I was born the youngest of 5 children to a family that can only be described as working class. My father a machinist and farmer and mother who was the typical SAHM -she did anything (everything) that needed to be done to keep life running- including stepping up to run the farm and take care of my father when he became disabled over 20 years ago. She tied the grapes in our vineyard every spring and kept the books for the farm for decades. She never returned to teaching fully time, but she enjoyed substitute teaching to reconnect to community and buffer the ebbs and flows of good and bad grape years. Generations before are farmers, carpenters, tool and dye makers, and more teachers. I do not come from people of frivolity or ease. And though I am well suited for the task- nursing as a profession was an economic decision for myself as well. I paid my own way through college then a masters degree. In my personal life and professional life, I know well the human cost of class struggle. The argument that this project will provide opportunity is short sighted and inadequate to create a stable, profitable, economically viable future for STAMP or Genesee County. I would rather see housing incentives for workers like hospitals do (x amount of dollars toward a home you must be primary owner for 5 years or more) or other similar programs.

Lastly, I echo all that the Tonawanda Seneca Nation has laid out in their comments in regards to the environmental impacts and concerns. It is the responsibility of every person on the GCEDC board and staff to ensure any projects do not negatively impact the people and ecosystem they neighbor. It is their responsibility to not only lay out rigorous review- but also contingency plans and accountability for the tenants

Sincerely,

Emily Grant

Dear Honorable Kathy Hochul,

On the front page of the March 21, 2026 edition of The Buffalo News there is an article that says,"Hochul sets 2040 as new target date for climate goals". The reason given for this is "We need more time."

This article ends with the following paragraph, "My worldview was shaped growing up in Western New York during the era of the toxic Love Canal, swimming in a Great Lake contaminated by industrial pollution, and breathing the orange smoke emitted from nearby smokestacks," Hochul said. "That's why leading the fight against climate change and protecting our environment is deeply personal for me."

If you truly believe this, you must STOP the proposed STAMP project for Genesee County. Since you have personal experience with industrial pollution in WNY, you know how this data center would affect people living near the STAMP site and beyond. The Tonawanda Seneca Nation is next to the STAMP site. Having to live next to this environmental disaster would be not only unfair, but cruel.

You, as our governor, have tremendous power. You can STOP this. You can be a leader in the fight against climate change. Nature itself has no voice, neither do children, including those yet to be born. For this, we must protect our beautiful environment. This letter is such a plea.

Yours truly,
Betty Pitcher

Sincerely,

Betty Pitcher

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Though there are many key stakeholders in this argument, I think all would be able to agree that the environmental review should be free of bias.

Sincerely,

streampublichearing@gcedc.com

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

As a resident of Orleans County, this data center will negatively impact my life. It is unconscionable to continue any further on the proposed plan. There are a multitude of reasons why this plan should have never been considered. Although you claim this data center to be safe for the environment, this is simply not the case. The waste water produced will leach forever chemicals into our waterways with devastating impacts to wildlife and human health. I reserve the right to submit further comments on the April 6

revised SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts. The planned construction is in a location not suitable for this type of development due to its proximity to wetlands, the wildlife refuge, and the Tonawanda Seneca Nation. The energy use will further contribute to climate change with equally devastating impacts. The energy use by the proposed data center will also increase my electric bills and decrease reliability for the Western New York region. GCEDC stands to gain while the people of this region will be harmed. Although economic development is in your name, this will not be the outcome of your deal with Apollo Global. Property values will decrease, and people will not move to this area. I chose to live in this area like many, who wish to be removed from sources of pollution and enjoy its natural beauty. Data centers are not what the people of Genesee County want, as has been clear by the extensive opposition you have gotten. As a tax payer, I am angered by the proposed deal. A business this large should be made to pay taxes. I despise the idea of billionaires harming my region and making millions more as a result. The company you are making this deal with has numerous corporate violations and supported pedophilia for years. The only positive attribute of this deal is the few lasting jobs created. However, the jobs created do not match the cost in lost tax revenue and environmental degradation. It is clear to see that GCEDC and Apollo Global are the only winners. I do not wish to see any furthering of generative AI and see it as a negative for society. Do whatever is necessary to keep this plan from moving forward or risk the destruction of our way of life in Western New York.

Sincerely,

Elijah T. Cunningham

Is this really what you guys in the GCEDC want to be remembered for? Destroying the environment at four wildlife refuges, destroying the culture and land of an indigenous people and giving 1.4 billion in tax breaks to aid a Fortune 500 firm to wreck the lifestyle of the hard working rural Americans you should be helping? If you go ahead and push this project through this will be your legacy. You can still change how future residents will think of you. Do the right thing and reject this data center!

Sincerely,

Subject: Comment on the proposed Genessee County data center - a Rochester resident

Hi. Being blunt: No. Energy prices are already high, and we do not have unlimited fresh water to pour into frivolous uses of limited resources - not to mention any of the very real opposition to generative AI itself as a technology.

This data center will parasitize resources and will increase tax burden on everyone in the entire region, just to maintain the infrastructure needed to deliver water and energy alone. As a resident of Rochester, I strongly oppose this not just because of my own beliefs and how it may impact my community without any benefit to us. More saliently, I oppose this because of the negative externalities that these data centers have in their regions - externalities which demonstrably occur every time one of these data centers is built. Destruction of communities and environments, financial crises for entire towns due to the socialized burden of energy costs, and the massive amount of vehicle traffic required to construct and maintain these facilities.

If you want to be re-elected by your constituents (which I am not one of, but word of mouth does travel far), it would be political suicide to support such a deeply unpopular and damaging resolution. Thank you.

STOP destroying our environment with data centers, solar farms and wind farms. NOBODY WANTS THEM and all the $$$ you politicians are getting in kickbacks are going to be discovered and we WILL hold you accountable!!

Listen to the taxpayers for a change and stop screwing us iver!!! You are all evil and corrupt liars and we don’t want any of you around anymore.

Sincerely,

Michelle Harrington

$1.4 billion in tax breaks - the original cost of the Buffalo Bills stadium. We are told it isn't money out of the taxpayer's pockets, but we are always told that and somehow we pay. NO CORPORATE WELFARE. NOT ONE DOLLAR, NOT ONE PENNY!

Sincerely,

Michael Urban

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

It is not hard to choose to integrate local people's perspectives into decision making. The methodologies and frameworks already exist. The community clearly desperately wants a voice in how their home looks, how it functions. They clearly care about the development of a strong local economy, and they have amazing ideas. You don't have to reinvent the wheel or start from scratch. Research the methodologies and frameworks for integrating community input into decision making. Cancel this project and begin a process of healing with your community, with a series of workshops focused on gathering community

input and ideas for local & regional economic prosperity that does not rely on AI or giant evil corporations.

I oppose this project in solidarity with local residents. I recreate in the GLOW region and love your community and its people. I support the Tonawanda Seneca Nation.

I as a Monroe County resident am participating to help advocate for your community members because you are not listening to them.

I implore you to make a different decision.

Sincerely,

Lauren Goulet

Haven't we harmed the First Nations people enough?? Protection of their homelands is THE most important and cherished value to the Seneca Tonawanda Nation. The data centre would decimate their Big Woods and endanger the Seneca Tonawanda people's right live the way of life they have enjoyed for centuries. Hunting, fishing, collection of traditional medicine, and craft making would all be adversely

affected. Respect their territorial rights. Do the right thing and if you must have industrial development, find a more suitable place for it.

Sincerely,

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

i want to live

Sincerely,

streampublichearing@gcedc.com

The aquifer underlying the proposed data centre is classified as "unconsolidated." The high permeability of the sand and gravel deposits and the shallow depth of the water table makes this aquifer particularly susceptible to contamination. This contamination would affect local water wells and pollute Oak Orchard and Tonawanda Creeks. Has the SEQR addressed the issue of aquifer contamination????

Sincerely,

The data centre would require massive infrastructure to bring gallons of water from Lake Ontario. Multinational corporations with no vested interest in Genesee County would be the ones developing this infrastructure. Who would be responsible for maintaining the infrastructure once the data centre is no longer viable ??? (in about 12 years) The taxpayers of Genesee County. NO to the tax abatements. No to the data centre.!!

Sincerely,

streampublichearing@gcedc.com

Do the math. The $1.44 Billion dollars in tax breaks are projected to create 125 jobs at the STAMP industrial site, at a cost of $11.7 million per job. The cost per job may be the most expensive in US history. There is no way the local govts can recoup that lost tax revenue. This is folly.. Don't be fooled by Stream Data and the Apollo Global Mgmt. Say NO to the fleecing of our communities.

Sincerely,

streampublichearing@gcedc.com

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

The proposed STAMP data center, Double Reed would be an expensive failure for our region. This data center would have irreversible consequences for our community and our environment. Damage to our infrastructure, water, air, etc, will not be able to be un-done. The STAMP "Double Reed" project is a scheme concocted by people who are already rich to extract more wealth from working people, who actually live in this area. It is clear that this project will provide little to no benefit to people in this area. None of our taxes should be going to assist the STAMP Double Reed project in securing funding or approval, and in fact the project needs to finally be abandoned once and for all.

Sincerely,

streampublichearing@gcedc.com

> As conservation chair for Onondaga Audubon, I am well aware of the rapidly increasing habitat loss occurring in New York as a result of policies that favor development over conservation. Our grasslands are at risk, and consequently, so are our grassland

birds. When 1,263 acres of land were set aside for the Western New York Science &Technology Advanced Manufacturing Park (STAMP) industrial site, the project was touted as being beneficial to the people of Genessee County and to the state of New York. The industries that would come to the area would create jobs, pay taxes to the state, and, overall, create a huge economic benefit for the people.

However, many questions have arisen about the potential negative impacts that would result from the construction of a hyperscale data center complex bigger than 38 football fields in the STAMP project area. The applicant claims that there will be no impact to wetlands or water bodies, but the site plans show that structures will be built right up to the borders of two regulated wetlands. Also, this sprawling complex would use 20,000 gallons of water every day and, as yet, there has been no discussion about what will be done with any industrial effluent. The STAMP site has no industrial wastewater treatment or discharge capacity. This puts adjacent wetlands at risk.

Additional disruptions to neighboring ecosystems will result from the development of the infrastructure needed for the construction of the huge data center. The data center alone would create 87.5 acres of impervious surfaces in an area that was previously undeveloped and a functional part of the water table. As the 1,263-acre STAMP is built out, it will interrupt the connectivity between the Iroquois National Wildlife Refuge, the Tonawanda Seneca territory, and five state Wildlife Management areas. In addition to adding light pollution to the shrinking dark sky and adding noise to the environment, building a 2.2 million square foot data center between areas used as migratory stopover sites will disrupt the movement of birds between them.

Much of the land set aside for the STAMP industrial site has been described as "undeveloped farmland." This term gives the impression that turning such acreage into an industrial site somehow improves it and allows it to become useful. But the land acquired for the project is already useful. It's important habitat for avian species that need an undeveloped place. In addition to the Short-eared Owls and Northern Harriers that have been documented as present in the development area, other species inhabiting adjacent areas would also be vulnerable to disturbance. In 2019, SUNY Environmental Science and Forestry faculty conducted surveys on Tonawanda Seneca Nation Territory land, at and surrounding the Big Woods that borders the STAMP site. In addition to Northern Harriers and Short-eared Owls already mentioned, they also found Cerulean Warblers and Common Nighthawks, both of which are species of Special Concern in New York state. The incessant noise and light pollution from the proposed data center would certainly have detrimental consequences for endangered birds and wildlife in areas adjacent to the actual building site.

On March 31, 2023, the northern long-eared bat was uplisted to Endangered Status. This means that projects located within the bat's range involving activities that might impact its habitat (tree removal, for example) will require additional effort to comply with the new status. As of August 24, 2022, the presence of the northern long-eared bat in the town of Alabama was documented. The presence of the northern long-eared bat within or in proximity to the proposed data center should be determined and steps should be taken to avoid destroying any bat habitat.

The proposed data center is located within a Raptor Winter Concentration Area occupied by Endangered Short-eared Owls and Threatened Northern Harriers. The development of previously open land will have a negative impact on the populations of these two grassland species. According to the New York Natural Heritage Program, Short-eared Owl populations are now limited to approximately 6 – 20 locations in New York state. It has been recommended that winter raptor locations with Short-eared Owls present should be

considered high priority. Therefore, if an occupied site is to be developed, great care must be given regarding the development of a mitigation plan that ultimately will benefit the species at risk. Of course, it would be better if it were not developed at all.

The location of the STAMP development site in prime grassland habitat necessitated the filing of an Article 11, Part 182 permit to take overwintering habitat used by the State-Listed Endangered Short-eared Owl (SEOW) and the State-Listed Threatened Northern Harrier (NOHA). Humans in the vicinity will also have to deal with the constant noise from the huge data center as well as disruptive and damaging lighting from the facility. The creation of heat fields by data centers is being documented, but there has been no time to conduct any thorough investigations about how they affect the environment.

I have been wondering what might be behind the current rush to construct data centers. Their long-term effects are unknown as are the risks they pose. There is little regulation as such. In this case, we don't even know who the developer (Stream US Centers + Apollo Global Management) will be leasing this data center to. Why does the firm need a non-disclosure agreement at this time?

What benefits will the STAMP monster data center provide to the people living near the site and to the people of New York state? Are rising costs for electricity and risks to the aquifer worth the benefits that the data center will provide? Are the costs to the public worth the creation of 125 permanent jobs?

At the Time 100 Impact Dinner, there was a discussion about AI's impact on society. I agree with Stuart Russell, co-founder of the International Association for Safe and Ethical AI (IASEAI), who stated that humans need to "recognize the possibility that not only may the bus of humanity be headed towards a cliff, but the steering wheel is missing and the driver is blindfolded." More research about the environmental impacts of data centers needs to be carried out and clear guidelines about how the developers and the operators of data centers will be held accountable for these impacts need to be clearly stated.

The Genessee County Economic Development Center should not rush to approve the huge data center on the STAMP industrial site until they can prove that the people of Genessee County and the ecosystems surrounding the project will not have to bear the costs of a huge mistake.

I am respectfully submitting these comments on behalf of Onondaga Audubon, an Audubon chapter serving nine counties in Central New York and the eastern Lake Ontario basin.

Sincerely,
Maryanne Adams

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

streampublichearing@gcedc.com

To: streampublichearing@gcedc.com
Subject: Opposition to STAMP Data Center

To whom it may concern,

As a resident of WNY, I vehemently oppose the creation of the STAMP data center in Genesee county. First, the proposed STAMP data center is a threat to the land, water, and life of the Tonawanda Seneca Nation. Indigenous people in the United States have faced a long history of disrespect and displacement, a history that is far from forgotten. Do not make the conscious decision to disrespect another indigenous nation's sovereignty.

Even beyond this fundamental concern is the blatant lack of evidence to show benefit for the surrounding community. Citizens across the United States have experienced the negative impacts of data centers in their communities. We are now rallying to prevent their spread that contributes to environmental pollution, noise pollution, increased utility costs, and increased water demand for minimal long-term job creation and financial benefits to all but those living in the local community. Data centers are NOT welcome in WNY.

Thank you,

Meghan E. Moholland, MS, RD

Reading an article tonight "WILDWATCH WEEKLY"
" LIGHTS OUT FOR MIGRATION: Helping songbirds find their way in the dark"

All the buildings for the Data Center and any other buildings at the Stamp Project center, will certainly be lit to the maximum.

We are avid birders and this is a concern. We feel this is a point we don't think has been brought up, or maybe was, in one of the meetings we couldn't make.

Also, "We reserve the right to submit further comments on the April 6 revised SEQR Application and related materials once we have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Subject: Say No To the Data Center

As a lifelong resident of Genesee County I am firmly opposed to the construction of the proposed data center. I believe the long term costs and consequences of this deal will far outlast any financial benefit. Please listen to the people who live in the community who have so little to gain and so much to lose.

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

To the GCEDC and all other public officials considering the future of the proposed data center complex at the STAMP mega industrial site: I write in strong opposition of the proposed data center and the financial incentives request submitted by STREAM US Data Centers. I write in support of the local residents of the

landscape immediately surrounding the proposed STAMP data center who have clearly and definitively in recent weeks expressed their opposition to the data center establishment in their home, and have spoken in no uncertain terms to the deep damage that the data center complex would have to home, health, and ability to go about their daily lives.

As a researcher in environmental fields, I recognize that the environmental impacts on the immediate and larger landscapes – in Alabama and beyond – would be vast and long-lasting. As a resident of New York State and as someone who is a part of the greater community in this landscape, I find any disregard of the concerns of local residents (expressed recently on an impressively large scale) on the part of the committee and other officials to be a core violation of public duty.

I also write in support of the community members of the Tonawanda Seneca Nation, whose sovereign territory is threatened by the immediate proximity and threat of large-scale industrial data center development at STAMP. I remind the committee and others involved in the STAMP decision-making process that respect for Tonawanda sovereign territory is not optional; protection of the Tonawanda' rights to their land and territory are enshrined within the laws of the United States. The obligation of county, state, and federal governing bodies to protect existing Indigenous territory, including the Big Woods, is perpetual and ongoing, and cannot be extinguished by fabricated predictions of economic benefit.

I urge all who are considering the future of the data center complex at STAMP to respect the right of residents and community members to health and wellbeing in their homes; to respect the rights of wildlife and plant-life to exist without decimation in the region; and to reject the STREAM data center plans and financial incentives request, which would cause systematic damage to people and landscape.

Sincerely,

streampublichearing@gcedc.com

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

As the Earth's climate continues to trend towards unstable behavior, natural resources and human viability become more vulnerable. The health of the Great Lakes Region must be taken into careful consideration. As a resodent of Erie County, I outright reject the proposed data center project in Alabama, NY.

Sincerely,

Spencer Klein

Subject: FW: Buffer Zone Clarification

Please include in the SEQRA record the following question that I have also submitted to the Town of Alabama Planning Board regarding permitted Buffer Zone uses. I have already submitted to GCEDC's SEQRA mailbox a direct question about the Crosby/Lewiston Rd intersection and proposed roundabout. This is a separate but related topic that I would like formally addressed in the SEQRA review and findings analysis.

These issues go directly to the adequacy of the SEQRA record and must be addressed before any Findings Statement is issued. ...Anne Bacon

Subject: Buffer Zone Clarification

In the Zoning 1 category of the "Data Center Questions PDF 03.31.2026," the description of buffer zones states that they allow "landscaping/access drives/utility infrastructure/berms." However, the IZA language I've reviewed specifies only the following permitted uses in the TD Buffer and Ag/Res Buffer:

TD Buffer – Permitted Uses:

1. Crossing of access drives and utility runs
2. Landscaping (Planning Board approval)
3. Signs (Planning Board approval)
4. Fencing
5. Utilities and utility-related uses (pump stations, meters, substations, trails, stormwater ponds), excluding solar panels

Ag/Res Buffer – Permitted Uses:

1. Crossing of access drives and utility runs
2. Landscaping (Planning Board approval)
3. Signs (Planning Board approval)

Based on this language, the IZA permits **crossings** of access drives, but does not authorize the placement of access drives or traffic infrastructure within buffer zones.

Can you please identify where in the GEIS, the IZA, or the Town Zoning Law access drives are permitted *within* buffer zones, beyond the limited crossing allowance? If no such provision exists, please update the published response to reflect the IZA's actual language.

Thank you.

Subject: Basom Data Center

Hello,

I saw your post on Reddit, and would like to submit a comment. Please see my comment below regarding the possible building of the data center in Basom, NY. Thank you for sending a call to action to allow individuals who will be impacted by this. I am very grateful for you.

I am a former resident of Basom, but I now live in Erie County. I grew up in this town, graduated from the local school, shopped at Holly Farms/IGA to get snacks after working outside, and frequented the Alabama Hotel. This place molded me into the person I am today. I lived right by the wildlife refuge, surrounded by all types of protected species.

The quiet, sleepy town offered a place of safety, kindness, peace, and always encouraged exploring. I spent much of my youth wandering around the paths, finding new creatures, and learning the importance of the protection of wildlife and farmland.

The area is surrounded by fertile farmland, which, prior to the (failed) Stamp Project being built, was commonly used to grow corn, peas, soybeans, and alfalfa. I remember many summers where the pea picking machines would come down the road in the late evenings where we would laugh at how the “pea picking party” had arrived. Many memories I have being in that town are always looked upon fondly.

Now that I hear a potential data center is looking to be built in the area where the grand Stamp Project was supposed to take place, I am both saddened and incredibly concerned.

I am not one to stand in the way of progress. I feel that it is important that in order to have a successful nation, progress and innovation must occur to benefit society, especially in a capitalist one. However, it is factual that data centers that have been built in the United States have done anything but provide benefit to anyone, and have not followed through on their promises of progress.

Data centers have polluted almost every sector it touches. A data center requires 1-5 million gallons of water per day to function. My question to you would be, where do you intend to get this water? The public drinking water? The protected swamps? With neighborhoods near data centers in the U.S., they have reported their water has turned black and that the data centers polluted the water with chemical inhibitors, nitrates, and metals. Do you intend to harm the residents that you are falsely promising jobs to? Just as you did with the initial proposal of the Stamp Project.

Not only will the data center pollute the water, but also the air. A single data center can produce greenhouse gases equivalent to 5-10 million cars on the road in the U.S. As you are aware, the swamps hold Bald Eagles, our nation’s symbol. The biologists in the area worked for decades to get the Bald Eagles off the endangered species list and increase the population in the area. By building this data center about over a mile away, you will work to effectively remove the hard work of those biologists and destroy our local wildlife.

We have visitors that specifically come to the area to view the wildlife and participate in hunting and fishing. This not only builds awareness and appreciation of the wildlife, but it brings people to the town to eat in our restaurants and shop in our stores on the nearby Native American Reservation, or Crossen Tree Farm during the winter months. The local area relies on people to come to the refuge for economic stability, which is crucial for the town and families.

I would ask that it be greatly considered what cost building the data center will put on the town and families. My family and friends still live in the town, and I am incredibly disheartened that their homes and peace could be destroyed by this senseless data center. Is it worth the destruction it will inevitably cause? Is it worth the danger that it will provide to us all? These are questions that I ask to be considered. Please rethink building this data center, and think about what benefit it will really bring the people of the area.

Thank you for your time and consideration.

Cassandra Pangrazio

Data centers are capital expenditures not community investments. Every chip and every day center will be obsolete in under 36 months! Politicians should remember overspending on tech technologies for elementary schools that just needed to be replaced again 5 to 6 years later. Technology evolution is faster now, and AI will always move to the fastest chips available. Most data center is being built will be bankrupt within six years. Beyond not invest investing taxpayer money in the process, beyond not giving

tax breaks and special privileges to the data centers, they should have to carry a bond to repair and remove what they do in the event that they are bankrupt. They will not repay you. They will not improve your community. Stop making this so easy for them. Thank you

Sincerely,

Matthew Winston

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

My name is Christine Zinni and I live in Batavia. I oppose the financial incentives request submitted by STREAM US Data Centers and Apollo Global Management for their proposed data center complex at STAMP.

1. Project Double Reed is a BAD DEAL for Genesee County and the GLOW Region. Double Reed threatens the quality of life, well-being, and cost of living of all residents of NY state, including and especially, the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

2. As a third-generation resident of Genesee County, whose father was Police Attorney for the City of Batavia, I can speak to the way of life, vision and values held by him and some other members of the "great generation".

3. They knew who their neighbors were, knew who lived across the yard/field, down the street or road, in the next small town, knew who owned what/which business and whom to turn to if they had problems. My family and other families chose to live in this region because they valued those tight bonds to people and had a deep appreciation of the land.

4. But a future with Double Reed aka Stream and the "undisclosed" Fortune 50 company that would operate said Data Center here is highly speculative and unknowable.

5. Lifting the veil on STREAM aka Double Reed, we find it is owned by Apollo Global Management, a trillion dollar private equity firm whose original founder, Leon Black, had close ties to the sex offender, Jeffrey Epstein. The co-founder of Apollo, and its current CEO, is also under investigation by the SEC for his ties to Epstein. The company is experiencing a 15 % stock drop and Apollo shareholders are currently involved in a class action lawsuit which alleges they were misled. https://investigativepost.org/2026/03/19/data-center-developer-ties-epstein-stamp-ny/ and SEC Probe over the Apollo Execs' Epstein Contacts

6. Is this the kind of energy or trouble we want to bring to our neighborhood/region?

7. In terms of job insecurity, articles in NYC newspapers indicate Apollo has a track record of disputes with labor unions. For example, Local 79 labor union rallied outside 5 Times Square and union members have been standing against Apollo to call for fair wages for NYC construction workers.

8. The known cost-cutting practices of trillion dollar private equity firms like Apollo regarding safety and environmental hazards have the potential to affect the health, and well being of not only workers, but local peoples and wildlife, begging this

important question: Who would citizens turn to if something goes wrong on the job or health problems occur/

9. From working in my father's law office, I recall how difficult it was to chase down and settle worker compensation claims with smaller companies. It has proven to be extremely difficult for an individual, or even collective groups to sue or collect compensation from a multinational–let alone a phantom like Apollo. Count GCEDC out; it is trying very hard to sell the land and be relieved of responsibility attached to individual parcels.

10. Moreover, It's unknown how long the private equity firm of Apollo Global Management plans to own the data centers they buy. Apollo has made no commitments to maintain ownership for a specific period of time.

11. Couple this with the widely known fact that we are currently experiencing a data center bubble which could burst at any time. In effect, the rapid development of new technologies threaten to make the construction and operation of a proposed data center in this region obsolete by the time it launches. Creating, in effect, a dinosaur, it would leave our region holding the bag with its corpse of ruins.

12. https://www.networkworld.com/article/4026672/technology-is-coming-so-fast-data-centers-are-obsolete-by-the-time-they-launch.html#:~:text=A%20data%20center%20constructed%20now,the%20market%20shake%20itself%20out

13. Based on these issues, I am concerned that if GCEDC allows STREAM to create a data center in our county, the only thing certain is what we are in for: more negative publicity associated with Apollo, uncertainty regarding their sustained commitment to the region, along with irreversible harm to the Tonawanda Seneca, the Wildlife Refuge and changes to the landscape, character, people and values of our region.

14. Isn't that way too high of a cost? How can that possibly be an investment in the future of our children that benefits our region?

15. *For all these reasons, I call on GCEDC to reject the incentives application from STREAM US Data Centers and Apollo Global Management.*

Christine F. Zinni, Ph.D.

Batavia, New York

Sincerely,

streampublichearing@gcedc.com

Subject: Request Periodic Environmental Review if Project Approved

Given that STREAM's SEQR application describes the project as a "30+ year long-term" community partnership, and given the rapid evolution of data center technology over multi-decade timeframes, beyond standard code enforcement activities, would the Town consider incorporating periodic environmental monitoring or review requirements into the SEQR process or site plan approval?

This could help ensure that changes in equipment, technology, or operational impacts over time are evaluated appropriately, especially since DEC has stated that data center impacts were not adequately addressed in the 2012 GEIS.

Is this type of periodic review something the Town has considered as part of its evaluation?

Sent: April 1, 2026 at 8:15 AM EDT
Subject: Reconciling DEC's January 28, 2026 SEQR letter with GEIS Data Center Consideration

In reviewing DEC's January 28, 2026 SEQR Lead Agency response (attached), I noted that DEC states in the section titled *"SEQR Coordination and Establishment of Lead Agency":*

“DEC recommends a supplemental Environmental Impact Statement (SEIS) be prepared for data centers as their impacts do not appear to have been adequately addressed in GCEDC’s 2012 GEIS or its subsequent updates.”

In contrast, several responses in the Town’s “Data Center Questions PDF 03.31.2026” indicate that the GEIS is being used as the basis for evaluating STREAM’s application — including statements that the GEIS noise limits apply to this project and that the GEIS provides the primary environmental framework for review.

The GEIS does reference data centers, but it appears to be in the context of typical 2011–2012 data-center sizes and utility demands. For example, the same GEIS lists examples:

- **Data center buildable site area:** 20–100 acres
- **Data center building area:** 0.4–2 million square feet
- **Data center power demand:** 100–500 MW
- **Data center water use:** ~300,000 GPD

With the exception of the water use estimates, STREAM’s proposal places the project at or above the maximum end of the GEIS ranges when evaluated as a whole facility. DEC’s letter also notes that the GEIS did not evaluate data centers of this scale or nature. STREAM’s SEQR application further describes the project as a “30+ year long-term” community partnership, underscoring the importance of understanding long-term impacts.

To help reconcile these two positions, could you please clarify - Was the environmental impact based on the average industry sizes presented, or based on the maximum levels of these industries in 2012? Where in the GEIS is a data center of the size and impact of the current STREAM proposal evaluated, given DEC’s statement that data center impacts were not adequately addressed?

This clarification would help the public understand how the Town is interpreting the GEIS in light of DEC’s comments.

Thank you.

RE: STAMP – Project Double Reed SEQR Lead Agency Coordination

Dear Mr. Masse:

This letter responds to your December 23, 2025, letter received by DEC on December 29, 2025, regarding SEQR lead agency coordination for the project referenced herein.

Name of Action and Brief Project Description:
Project Double Reed
STAMP – Stream US Data Center

Project Double Reed would consist of the construction of three two-story data center Buildings, using 500 megawatts of energy per year, totaling approximately 2.2 million square feet across approximately 90 acres, and infrastructure improvements to support the same. An additional 40 acres of the STAMP Site (one area adjacent to the Edwards facility and one area to the north of the Plug Power site) would be utilized as temporary construction/logistics areas.

DEC Permits (if any): SPDES General Permit for Construction, Bulk Storage Registration, and Air Permit/Registration.

DEC Contact Person: Ashley Kasperowicz

SEQR Classification: [X] Type I [ ] Unlisted

DEC Position: Based on the information provided and representations made by GCEDC:

[ ] DEC does not object to GCEDC assuming lead agency status for this action.

[ ] DEC wishes to assume lead agency status for this action.

[X] DEC does not have discretionary permitting jurisdiction over this action to support lead agency status. However, additional project information and formal

applications/submissions are required before DEC can make a final determination on any potential regulatory authority including required permitting. DEC is an interested agency.

Comments: [X] see attached [ ] none

If you do not concur with the DEC position indicated above, please contact this office to resolve designation of lead agency within the time allowable under Part 617.

Please feel free to contact this office for further information or discussion.

Sincerely,

Ashley Kasperowicz

Ashley Kasperowicz

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

This site is adjacent to public lands as well as tribal territory and deserves a very thorough assessment of the impact to the environment, affect to neighboring public lands as well as tribal territory. Furthermore NYS taxpayers should not be subsidizing the rollback of climate goals by subsidizing cheap power and public funding to a project that does not provide benefits to the citizens of the state.

Sincerely,

David J DuBois

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

My name is Christine Zinni and I live in Batavia. I oppose the financial incentives request submitted by STREAM US Data Centers and Apollo Global Management for their proposed data center complex at STAMP.

1. Project Double Reed is a BAD DEAL for Genesee County and the GLOW Region. Double Reed threatens the quality of life, well-being, and cost of living of all residents of NY state, including and especially, the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

2. As a third-generation resident of Genesee County, whose father Police Attorney for the City of Batavia, I can speak to the way of life, vision and values held by him and others members of the "great generation".

3. They knew who their neighbors were, knew who lived across the yard/field, down the street or road, in the next small town, knew who owned what/which business and whom to turn to if they had problems. My family and other families chose to live in this region because they valued those tight bonds to people and had a deep appreciation of the land.

4. But a future with Double Reed aka Stream and the "undisclosed" Fortune 50 company that would operate said Data Center here is highly speculative and unknowable.

5. Lifting the veil on STREAM aka Double Reed, we find it is owned by Apollo Global Management, a trillion dollar private equity firm whose original founder, Leon Black, had close ties to the sex offender, Jeffrey Epstein. The co-founder of Apollo, and its current CEO, is also under investigation by the SEC for his ties to Epstein. The company is experiencing a 15 % stock drop and Apollo shareholders are currently involved in a class action lawsuit which alleges they were misled. https://investigativepost.org/2026/03/19/data-center-developer-ties-epstein-stamp-ny/ and SEC Probe over the Apollo Execs' Epstein Contacts

6. Is this the kind of energy or trouble we want to bring to our neighborhood/region?

7. In terms of job insecurity, articles in NYC newspapers indicate Apollo has a track record of disputes with labor unions. For example, Local 79 labor union rallied outside 5 Times Square and union members have been standing against Apollo to call for fair wages for NYC construction workers.

8. The known cost-cutting practices of trillion dollar private equity firms like Apollo regarding safety and environmental hazards have the potential to affect the health, and well being of not only workers, but local peoples and wildlife, begging this

important question: Who would citizens turn to if something goes wrong on the job or health problems occur/

9. From working in my father's law office, I recall how difficult it was to chase down and settle worker compensation claims with smaller companies. It has proven to be extremely difficult for an individual, or even collective groups to sue or collect compensation from a multinational–let alone a phantom like Apollo. Count GCEDC out; it is trying very hard to sell the land and be relieved of responsibility attached to individual parcels.

10. Moreover, It's unknown how long the private equity firm of Apollo Global Management plans to own the data centers they buy. Apollo has made no commitments to maintain ownership for a specific period of time.

11. Couple this with the widely known fact that we are currently experiencing a data center bubble which could burst at any time. In effect, the rapid development of new technologies threaten to make the construction and operation of a proposed data center in this region obsolete by the time it launches. Creating, in effect, a dinosaur, it would leave our region holding the bag with its corpse of ruins.

12. https://www.networkworld.com/article/4026672/technology-is-coming-so-fast-data-centers-are-obsolete-by-the-time-they-launch.html#:~:text=A%20data%20center%20constructed%20now,the%20market%20shake%20itself%20out

13. Based on these issues, I am concerned that if GCEDC allows STREAM to create a data center in our county, the only thing certain is what we are in for: more negative publicity associated with Apollo, uncertainty regarding their sustained commitment to region, along with irreversible harm to the Tonawanda Seneca, the Wildlife Refuge and changes to the landscape, character, people and values of our region.

14. Isn't that way too high of a cost? How can that possibly be an investment in the future of our children that benefits our region?

15. *For all these reasons, I call on GCEDC to reject the incentives application from STREAM US Data Centers and Apollo Global Management.*

Christine F. Zinni, Ph.D.

Batavia, New York

Sincerely,

Christine F. Zinni

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

My husband and I are Orleans County residents and we strongly oppose the construction of any data centers anywhere in our area — especially one adjacent to protected wildlife habitat and a Native American reservation. This is wrong on so many levels and would do nothing to improve our community.

Sincerely,

Sara Rosario

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

The data center complex, proposed by STREAM US Data Centers and Apollo Global Management, threatens the quality of life, well-being, and cost of living of local communities. It also violates the sovereignty and way of life of the Tonawanda Seneca Nation, and poses massive social and environmental risks for all of New York state and the Great Lakes Bioregion.

And the complex would raise electricity rates and increase air pollution burdens felt by ALL New Yorkers.

Sincerely,

juliana smith

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

To protect our waters and natural resources, my family of third generation Genesee County residents are adamantly opposed to the proposed data center.

Sincerely,

juliana smith

To: streampublichearing@gcedc.com
Subject: Noise measurement needs

STREAM's SEQR Development Application states that "the equipment associated with this project does not contain unusually high frequencies or contain low-frequency tones." This claim is inconsistent with the well-documented acoustic behavior of modern data-center cooling systems. Any installation that uses large-diameter axial fans, condenser fans, dry coolers, or air-cooled chillers will, by design, generate substantial low-frequency energy in the 31.5–125 Hz bands, along with tonal components associated with blade-pass frequency and motor harmonics.

Given these established characteristics, I am requesting clarification on a fundamental issue:

If STREAM is confident that the proposed equipment will not generate low-frequency tones or elevated low-frequency energy, why does the acoustical study rely exclusively on A-weighted (dBA) metrics and omit C-weighted (dBC) measurements as well as octave-band or 1/3-octave-band analysis?

dBC weighting and octave-band analysis are standard engineering tools for evaluating low-frequency noise. They are required to accurately characterize the acoustic output of fan-driven mechanical systems and to assess low-frequency propagation, tonal content, and nighttime impacts at receptors. Their omission leaves a significant gap in the analysis and prevents a complete evaluation of potential low-frequency impacts.

I am therefore asking, again, how STREAM and its consultants intend to adequately evaluate low-frequency noise without using dBC weighting and octave-band data.

Sincerely,

Gerald Bacon

In my relatively short life, I have seen far too many of my own public lands and wild areas destroyed in the name of "progress". I am wholeheartedly convinced that progress can continue without this level of destruction, it just requires willing participants. I hope that one day, my own children will have the opportunity to see what the world can be when we decide to live with it, not from it.

Sincerely,

Adam Novak

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

As a young woman with multi-generational roots in rural Genesee County, and specifically with my great-grandparents and grandmother who resided in Akron, I am deeply personally connected to the area with proposed development for the STAMP site. My lifelong appreciation for the environment and our rural Western NY community has pushed me to remain in strong opposition to the proposed data center. This development threatens the stability of local unique ecosystems, including

neighboring wetlands, that are essential to sustaining all life. Further, this development directly threatens the ecosystem that is directly related to the identity and cultural practices of the Tonawanda Seneca people, whose lands and waters all Genesee County residents live on today. It is our duty to protect the wellbeing and dignity of all residents of Genesee County, including our Indigenous neighbors. I urge GCEDC to rethink its approach to economic development to consider more sustainable and community-engaged pathways to bring economic stability to our area. This decision will be irreversible, leave a legacy of environmental destruction, and make daily expenses for local families that much more difficult. This is not the path forward for our community, and I urge the GCEDC to think about the future of the young people in this region and the forever tarnished landscape it would be leaving behind for us.

Sincerely,

Charlotte Nelson

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Rebecca Bell

Subject: Stream question

For years, we've been told by the GCEDC and its major tenants—Plug Power, 1366 Technologies, and now STREAM Data Centers—that they want to be "good neighbors," that they value working with residents, listening to the community, and preserving the rural character of our town. Yet noise pollution from data centers is a documented issue worldwide.

Given that reality, it is difficult to understand why STREAM is proposing to place its generators on the **north** side of the North Campus—the side **closest to long-established homes**. At one of their open houses, a STREAM representative acknowledged that this siting choice was driven by cost savings. If that is the case, it raises a fundamental question: why should nearby residents absorb the noise impacts so the company can reduce its construction expenses?

STREAM has also recently stated that its rooftop sound-mitigation panels will require **three-foot gaps at the bottom on only one side of the building**. If noise control is truly a priority, why would they choose to leave the gap on the **north** side of the building—the side facing peoples homes? This design choice further reduces the effectiveness of the mitigation and places the burden squarely on the residents who have lived here for decades.

These decisions do not reflect the promises of being a good neighbor or protecting rural character. They reflect a pattern of minimizing costs at the expense of the people who already live here.

I reserve the right to submit further comments on the April 6 revised SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Gerald Bacon

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Western New York has drastically recovered from the major pollution corporations caused from the 1940's, 1950's and 1960's. This new Data center will start reversing what we gained.

Sincerely,

Raymond Rappold

Subject: STOP the STAMP Monster Data Center

For the Genesee County Regional Economic Development Center:

I am writing to state my opposition to the proposed Massive STAMP Data Center Complex.
I am opposed to the creation of the complex.
I am opposed to the financial incentives - the sales tax and mortgage tax abatements and I request that GCEDC's Board of Directors reject the requested financial incentives package.
I demand that GCEDC follow ALL of NYS DEC's recommendations.

The proposed site is at the center of an area which is home to the Iroquois National Wildlife Refuge, the John White Wildlife Management Area and the Tonawanda Wildlife Management Area, in addition to Olsen Marsh, the Iroquois NWR Kumpf Marsh, and Mohawk Pool. It is also adjacent to the Tonawanda Native American Reservation.

These are pristine areas, which I frequent regularly. During migration season, my friend and I have noted over 75 bird species on a single evening hike, including the American Woodcock, American Eagles, and even Trumpeter Swans. This is a priceless treasure, generations in the making, and now it is threatened by the proposed STAMP Data Center Complex.

No matter what the Data Center proponents argue, the presence of this Data Center -- 3 100+foot structures, occupying more than 2.2 million square feet, using more than 500 megawatts of electricity per year, and spewing hazardous pollutants into the environment -- will negatively impact these Wildlife areas and the migrations of the Wildlife they seek to nurture and protect.

No matter what the Data Center proponents argue, this center will not create a booming economy. It may create a couple hundred temporary jobs, at best, to build it, and will destroy the conservation, tourist, and agrarian economies that now exist.

While the monies gained may, for a short time, keep residents' water bills from rising IF it pays for updating, it will absolutely, without a doubt, increase every residents' electric bills for eternity.

Of course, these many acres of Wildlife and pristine Nature do not have a voice in politics or economics and do not vote. Rural communities are vulnerable. Native communities are vulnerable. But these are the very populations that politicians - our representatives - need to protect, NOT EXPLOIT.

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed -- the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

Sincerely,

Garland Godinho

There is no place here for a monstrosity that carries so many negative impacts across the board!!!! Genesee county (GCEDC) has none whatsoever, concern for the residents of Alabama and surrounding neighbors AND the Tonawanda Senecas whose land this IS!!!!! There's no need for subsidies for multimillion billionaire corporations to set up a data center here !!! Have a head and most of all a human heart and soul!!!! GET OUT OF HERE with your destruction

Sincerely,

Subject: STREAM US Data Centers Project

Hello,

Please do not build this data center.
Please do not choose to harm the environment over financial gain.
Humans have already harmed the Earth and continue to choose to do so; please be better.

Please make a better choice.

Thank you.

Subject: STREAM US Data Centers Project

Hello,

Please do not build this data center.
Please do not choose to put that strain on our water supply and electrical grid for financial gain.
Please do not choose to increase residents' bills for financial gain.

Please make a better choice.

Thank you.

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

We dont want data centers

Sincerely,

evelyn guffey

There is so much information coming out about infrasound and it's effects on the communities with data centers. From headaches, sleep disorders to much more serious health effects. The acoustic barriers are ineffective against infrasound. There is no current effective way to combat the effects of finfrasound. Virginia and Texas are a few of the states already experiencing if effects on the community. We need to look deeper and learn from others before we make such a detrimental decision. I reserve the

right to submit further comments on the April 6 revised SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts."

Sincerely,

Gaye Drock

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

The last town Board that I read about that approved a data center to be built lost their jobs. Every. Single. one of the board members, voted out. And it was in a county even smaller than Genesee. No more status, no more salary. If you don't give a damn about your constituents, then maybe think about the loss of your job and reputation.

Sincerely,

Nancy Kitanik

I strongly oppose the proposed STREAM data center at the STAMP site in the town of Alabama. There is a reason many many communities all over the country are enacting a moratorium on data centers. We do not know the long term effects of monster data centers on air, water, and of the increased temperature surrounding them. It should not be built near the wildlife refuge or the Tonawanda Seneca Nation land. Please stop this construction

Sincerely,

Jill Klotzbach

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Alexandra Hoeglmeier

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

STREAM has come to our quiet, serene location not to help us, not to make our lives better or to increase our quality of life. They don't care how you live or what destitutions they will put on our door

steps. STAMP is here for one reason only and that is to help themselves. They are here to reap the benefits of the low costs to build, eat up plentiful land, enjoy monstrous tax-free incentives and they want our water and electricity. They focus on rural counties in need of an economic boost with leaders that will fall for their exaggerated kickbacks due to a lack of expertise or have no policies in place when it comes to data center building. But we're smarter now. We're more educated. People are more aware. The GCEDC has learned a thing or two along the way and they have a commitment to people to be honest, transparent and to listen to their voices.

This build will create irreversible and permanent changes to the landscape. They plan to build next to the Tonawanda Seneca Nation, wildlife refuges, and nature preserves. They don't care about the land or the beauty of it. They see dollar signs and feel no desolation in laying tons of cement on the green lands of Genesee County. Why destroy the very nature we all enjoy and what makes us unique?

My family felt very no impact in the need for food during Covid. We harvested our garden and preserved as much as we could the previous year (not knowing that Covid was coming). We had a garden we were eating from daily and my son hunted the prior winter so we had a freezer full of meat. Many of the Tonawanda Nation residents rely on the wildlife, gardening, clean air and water to prosper as we have for 100's of years. We still ensue traditional practices, including hunting, and farming. Fishing has already been compromised from upstream companies. When I was younger, we ate the fish in Tonawanda Creek. Today, the NYS Department of Health warns consuming fish is not recommended due to high contamination risks. STREAM will affect the Tonawanda Seneca Nation whether they want to admit it or not.

STREAM is so disconnected from nature and self-sustaining albitites, they could care less. I wonder at what point do people like this become hindered to only see **$** and lose their compassion and heart for people? Where along the way does humanity leave them?

Sincerely,

streampublichearing@gcedc.com

CEO Mark Masse said the project would create 125 jobs once operations begin, with an average annual salary of $88,000.

Be honest here Mark. Be honest. Those jobs will not be filled locally. It will take residents YEARS to complete their education in addition to the acquiring the 2-3 years' additional experience listed as "requirements" under STREAM's current job postings at other data centers.

Jobs currently listed on STREAM's web site require BS degrees in addition to a few years of experience. Some jobs listed require a Master's Degree AND a few years' experience to qualify.

What $88,000 a year job do you have for ME? For the janitor at the school? For the 40-year-old single mom waitress at Applebee's? Bus drivers, stockers at Target, door greeters at Walmart, teacher aides, librarians? VETERANS? What $88,000 a year job do you have for them?

STAMP job's will not be filled locally and we all know this. If you're lucky, 3-5 young fresh out of college graduates with a few years' experience might apply. Even then the guy with 5-10 yrs experience will e looked at for his expertise. These jobs will go to specialists outside of our county rather than to the local residents that have put heart and soul into Genesee County just trying to make a living.

Sincerely,

Ashley Shenandoah

RE: STAMP – Project Double Reed

To the Genesee County Economic Development Center (GCEDC):

New York Lawyers for the Public Interest (NYLPI) writes to submit this comment concerning the SEQRA Environmental Review Process for Project Double Reed, the proposed data center development being considered at the STAMP site in Alabama, NY.

NYLPI is a legal civil rights organization that advocates for environmental, disability, and health justice for all New Yorkers. NYLPI works toward a New York where all people can thrive in their communities, with quality healthcare and housing, safe jobs, good schools, and healthy neighborhoods. Our Environmental Justice program focuses on supporting and uplifting our coalition and community partners' priorities through advocacy and litigation, on issues ranging from CLCPA implementation to ensuring sewer repairs to address flooding in local neighborhoods.

The Project Double Reed proposal raises serious questions about the environmental and economic impacts of the project. The data center is projected to consume 500 megawatts of electricity annually, enough to power over 400,000 households. Without certainty that this massive energy use will come from true clean energy sources like wind, solar or geothermal, this project simply cannot be squared with the mandates of the CLCPA, which requires significant reduction of greenhouse gas emissions across the state in all sectors. Even if the project were to be powered by clean energy sources, its enormous energy use would use power that could otherwise have replaced fossil fuel power, forcing New York to rely on fossil fuels for longer than necessary, and making it harder to reach our climate goals.

Moreover, this project's massive energy consumption will undoubtedly drive up the cost of energy for everyday New Yorkers. One in four New York residents already experience a "high energy burden" from their existing energy bills, and the lowest income New Yorkers spend

up to 34 percent of their income on energy costs.[1] National statistics confirm that data centers are a major driver of increased electricity rates on the grid.[2] This project cannot move forward without real, meaningful and enforceable safeguards in place to ensure that increased energy costs caused by this proposed data center would not continue to raise every day New Yorkers' utility bills.

NYLPI is also concerned that the impacts of Project Double Reed are not adequately addressed in the 2012 GEIS, as already noted by the New York State Department of Environmental Conversation.

NYLPI therefore calls upon GCEDC to:

- Conduct and publish a supplemental Environmental Impact Statement that adequately addressed the impacts of a data center at the STAMP site;

- Ensure that the supplemental EIS take into account new laws and regulations such as the Environmental Justice Siting Law and the revised 6 NYCRR Part 664 Freshwater Wetlands Regulations;

- Ensure that the SEQR analysis incorporates a review of cultural and environmental justice impacts on the Tonawanda Seneca National and includes input from the Nation, DEC, and the State Historic Preservation Office;

- Require independent studies to evaluate the impacts of Project Double Reed on issues such as noise pollution, air emissions, and water and stormwater impacts be completed and made available to the public with sufficient time for public engagement and feedback; and

- Require, prior to completing SEQR review, that a public hearing is held after all studies and application materials are finalized and made available to the public.

Regarding the Environmental Justice Siting Law, we remind you that DEC has pending revisions to help implement the goals of this law, and that foresight in applying the proposed regulations and forms may facilitate a more thorough review as the law requires. Finally, we remind you that the communities most impacted by the siting of this proposed location must be engaged frequently and meaningfully, and that their feedback and perspective be paramount to any decision made to ensure proper development of any ultimate project at this location.

Thank you for your consideration. NYLPI reserves the right to submit further comments on the April 6, 2026 revised SEQR application and materials once we have reviewed and analyzed these materials to fully assess the project's impacts on the local communities.

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

As a resident of the Town of Alabama for the past 44 years the entire STAMP project site should have never been developed. Anyone with common sense could see that rezoning farm land into a industrial development area has been the most ridiculous idea ever. To now consider building a MEGA DATA CENTER that borders a 20,000 acre Federally Protected Wildlife refuse and the Tonawanda Native American reservation adds to the insanity. This residents of the Town of Alabama never thought that in

2005 when Steve Hyde from GCEDC set his sights on this particular piece of land, in all of the GLOW region, we would be in a 21 year fight to save our community. That a signed agreement in 2012 by 5 members of the Alabama Town Board would eventually destroy our community. We have lost our Town and the Data Center will destroy the Wildlife and the Reservation. Everyone making the decision on the revenue generating from the demise of the Town of Alabama needs to be held accountable that includes GCEDC and everyone associated to them.

Sincerely,

Marianne Molaro

Subject: Public Comment - STREAM Tax Incentives and SEQR application
Attachments: AECreport-STREAMproposeddatacenter.pdf

Greetings.

We appreciate this opportunity to provide feedback on the State Environmental Quality Review (SEQR) application and the proposed $1.46 Billion in taxpayer subsidies for the data center development at the Western New York Science and Technology Manufacturing Park (STAMP).

The New York Sustainable Business Council (NYSBC) represents over 2,000 small businesses across the state. New York's small businesses are the economic engines of our communities, accounting for 98% of all businesses across the state and roughly half of the state's private sector workforce. We provide steady employment, meet essential needs, and help sustain the state's tax base.

NYSBC strongly opposes the $1.46 billion in financial incentives for this project and asks that the GCDEC reject the application.

Many of our businesses are already experiencing challenges caused by recent data center proliferation across the state, and we are alarmed by the Applied Economics Clinic (AEC) report attached to this email. Technological growth and private development projects like this must never come at the expense of the businesses and communities that sustain New York's economy.

Please include this statement and the attached AEC report as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law and the SEQR Environmental Review Process for the data center complex proposed by STREAM US Data Centers for the STAMP industrial site.

Thank you.
Bob

Comments Regarding STREAM's Proposed Data Center

Author: Bryndis Woods, PhD

Date: April 9, 2026

Executive Summary

In January 2026, STREAM U.S. Data Centers, LLC (STREAM) applied to the Genesee County Economic Development Center to construct a 2.2 million square-foot data center campus in the Town of Alabama, New York, located in Genesee County. On behalf of Tonawanda Seneca Nation and Sierra Club Niagara Group, these comments address STREAM's proposed data center, including its claimed costs and benefits for the local community.

Key findings include:

- The project would require 500 megawatts (MW) of electricity, approximately four times the total generation capacity currently operating in Genesee County (122 MW).
- STREAM does not provide any supporting materials for its cost-benefit analysis (CBA), which fails to meet standards expected in a public decision-making process and is insufficient to determine whether the proposed project would provide net benefits for the local community.
- STREAM's CBA results differ substantially from one CBA to the next: total costs increased from $472 million to $781 million to $1.4 billion, and total benefits vary from $1.2 billion to $2.6 billion.
- STREAM has failed to address potential costs associated with the project, including: effects on property values, effects on tourism and recreation, utility bill impacts, public health impacts, the cost of public infrastructure required for the project, or the local disturbances associated with project development such as placing cables and fiber optic lines.
- STREAM's job creation estimates exceed values found in publicly available data and information, average publicly available estimates indicate that the proposed project would create about 4,100 fewer direct temporary jobs than the Company claims, and 1,300 fewer indirect temporary jobs than the Company claims.
- STREAM has requested a local sales tax abatement and mortgage recording tax abatement, which—taken together—are worth 25 times more than the benefits provided by the proposed PILOT/Host payments.
- Valuing data centers is challenging and complex: if STREAM's proposed data center's assessed property value is incorrect, that would impact the ratio of the Company's PILOT/Host payments relative to their waived property taxes.
- STREAM's proposed data center is near the Tonawanda Seneca Nation's ancestral forest The Big Woods, Iroquois National Wildlife Refuge, the Tonawanda Wildlife Management Area, and the Oak Orchard Wildlife Management Area and may negatively impact local tourism and recreation, which are an integral part of the community and economy.

Introduction

The United States is the world's largest data center market and data centers are expected to continue to grow rapidly with impacts for communities all around the nation.[1] As data centers have grown, more communities are grappling with what it means to have a data center for a neighbor, and public opposition has grown. According to a research report from Data Center Watch—a firm tracking data center opposition—data center developments worth a combined $64 billion were either blocked or delayed between May 2024 and March 2025, due, at least in part, to local opposition efforts.[2] The report also found that opposition to data centers "cuts across political lines…and marks a rare area of bipartisan alignment in infrastructure politics."[3] According to The Brookings Institution's research summary of America's Rural Future virtual symposium, which "examined the local implications of AI and data center development for rural communities across the United States," rural community representatives emphasized the importance of "trusted information, transparency, fairness, clear guidelines, and governance capacity to ensure inclusive processes that advance community interests" including by establishing "clear, measurable local benefits."[4] Here, it is important to note that STREAM has not disclosed who the tenant of the data center campus will be, nor has it disclosed how various costs and benefits will be allocated between STREAM and the tenant, despite acknowledging that such allocations exist.[5]

Common concerns among local communities where data center developments are proposed include higher utility bills, water consumption, noise, and impacts on property values and green spaces.[6] The remainder of these comments address all those concerns, except higher utility bills for which detailed quantitative analysis is recommended. The timeline of the proposed data center development at issue in these comments did not permit assessment of the project's potential impact on utility rates and bills. However, it is important to note that in the three states with the highest concentration of data centers—Illinois, Virginia and Ohio—electric bills were 16, 13 and 12 percent higher in August 2025 (respectively) than a year prior, more than double the national average electric bill increase.[7] Across the country, electric bills have been increasing faster than inflation—the increases were more than double the rate of inflation in 2025—and data center developments are important to understanding why. Their high energy demand, the cost of new electric infrastructure they require, and ongoing electric maintenance costs are all costs

shared across all electric customers in the same utility service area.[8] According to a Bloomberg News analysis from 2025, areas near new data centers saw an increase in electricity costs of as much as 267 percent compared to 2020.[9]

On behalf of Tonawanda Seneca Nation and Sierra Club Niagara Group, these Applied Economics Clinic comments address STREAM's proposed data center, including its claimed costs and benefits for the local community. We determine that the materials the Company has provided are incomplete and insufficient to determine whether the proposed project would provide net benefits for the local community. Finally, we highlight three potential costs that are omitted from the Company's materials: lower-than-claimed local job creation, effects on property values, and effects on tourism and recreation. We would like to emphasize that these three costs are not comprehensive of all the costs from the proposed data center that ought to be considered. Additional potential costs include effects on utility bills (as discussed above) and effects on public health (due to the emissions from on-site diesel-fired backup generators).[10]

About STREAM's proposed data center

In January 2026, STREAM U.S. Data Centers, LLC (STREAM or The Company) applied to the Genesee County Economic Development Center (GCEDC)—a public agency that offers tax breaks and other economic incentives to attract private business—to construct a 2.2 million square-foot data center campus at the Western New York Science & Technology Advanced Manufacturing Park (STAMP) in the Town of Alabama, New York. STREAM's parent company is Apollo Global Management (Apollo), one of the world's largest private equity firms reporting assets worth about $450 billion in September 2025.[11] (Apollo is being sued by its shareholders in a proposed class action for "allegedly defrauding them for nearly five years about [Apollo's] business dealings with disgraced sex offender and financier Jeffrey Epstein").[12] The proposed

[9] Saul, J., Nicoletti, L., Pogkas, D., Bass, D., Malik, N. September 29, 2025. "AI Data Centers Are Sending Power Bills Soaring." Bloomberg. Available at: https://www.bloomberg.com/graphics/2025-ai-data-centers-electricity-prices/?embedded-checkout=true

[10] Because data centers need to operate 24/7, 365 days a year, they need backup power during grid outages. To ensure this power is available when needed, data centers have backup diesel generators that are tested at least once a month. See: https://www.eesi.org/articles/view/communities-are-raising-noise-pollution-concernsabout-data-centers. Diesel generators produce local air pollution, including particulate matter and NOx [nitrogen oxides], "which impacts growing lungs of children, can add cases of asthma, and can exacerbate heart disease and other underlying diseases in the elderly." See: https://www.lincolninst.edu/publications/land-lines-magazine/articles/land-water-impacts-data-centers/.

data center campus includes three, two-story buildings on a 90-acre footprint. An additional 40 acres will be "utilized as temporary construction logistics areas in support of the project."[13] The project would require 500 megawatts (MW) of electricity, which is approximately four times the total generation capacity currently operating in Genesee County (122 MW).[14]

The Town of Alabama is in Genesee County, between Buffalo and Rochester, sits on approximately 28,500 acres, and has a population of approximately 1,800 with a median household income of $64,000. About 5,700 acres within the Town's borders is sovereign land of the Tonawanda Seneca Nation, and the proposed project site borders the Tonawanda Seneca Nation's ancestral forest, The Big Woods (see Figure 1).[15] Several wildlife preserves occupy much of the Town's land, including the Iroquois National Wildlife Refuge, the Tonawanda Wildlife Management Area, and the Oak Orchard Wildlife Management Area.[16]

STREAM's claimed costs and benefits

According to STREAM's most recent project application, the total cost of the project is estimated at $19.5 billion: an $8.3 billion increase from the previous version of the Company's application filed just one month prior,[17] and a $13.2 billion increase from the Company's original application filed in early 2025 (see Figure 2 below).[18] (Note: the Company's 2025 application was withdrawn after the Tonawanda Seneca Nation and Sierra Club filed a lawsuit with the New York State Supreme Court that alleged that GCEDC violated state law by failing to conduct a full environmental review.[19]) The Company's estimated total costs include: 1) construction costs; 2) costs to purchase the land; 3) building costs including engineering costs, architect costs, and blueprint fees; and 4) other equipment costs, including computers, furniture, etc.[20]

Figure 2. STREAM data center estimated total cost (billions $)

[20] Genesee County Economic Development Center. February 27, 2026. *Application for Financial Assistance.*

As part of its application, STREAM contracted with a third-party (MRB Group) to conduct a series of cost-benefit analyses (CBA) of the proposed project, comparing the project's expected costs with its expected benefits.[21] The costs reflected in the Company's CBA are tax exemptions (see Table 2 below). The Company's March 2026 CBA report notes that STREAM "will be submitting a separate economic impact study based on industry experience," but no such study has been made available on GCEDC's project website yet.[22]

Three CBAs have been submitted by the Company: the first in February 2025, the second in January 2026, and the third in March 2026. All three CBAs claim that STREAM's benefits will outweigh the limited costs included in the studies:

- The February 2025 CBA concluded that local benefits would outweigh costs 5-to-1,
- The January 2026 CBA concluded that local benefits would outweigh costs 7-to-1, and
- The March 2026 CBA concluded that local benefits would outweigh costs 3-to-1.

The most recent (March 2026) CBA maintains that benefits stem from: 1) new wages from job creation; 2) new revenues to municipalities and schools from Payment in Lieu of Tax (PILOT)[23]/Host payments; 3) new sales tax revenue from the project's electrical usage; 4) new revenues to the Town of Alabama Fire District due to annual fire district fees; 5) Company investments in electrical infrastructure needed to support the project; and 6) project fees being reinvested by GCEDC to support projects that benefit Genesee County.[24] Only some of these benefits are monetized in the BCA analyses performed by the Company (see Table 1). It is important to note that the Company maintains that investments in electrical infrastructure needed to support the project is a benefit for the local community, but the primary beneficiary of additional electrical infrastructure required for the project is STREAM itself, not the local community that hosts said infrastructure.

All three studies fail to include key potential costs to the local community, such as higher utility bills, impacts of increased water consumption, noise pollution, impacts on property values, effects on green spaces, the cost of public infrastructure required for the project, or the local disturbances associated with project development such as placing cables and fiber optic lines.

STREAM's CBA results differ substantially from one CBA to the next: total costs increased from $472 million to $781 million to $1.4 billion. Total benefits also varied considerably: from $1.2 billion to $2.6 billion to $2.2 billion (see Table 2). Even though total estimated benefits fell between the January 2026 CBA and the March 2026 CBA, two benefit categories increased substantially: sales tax revenue, which increased by $190 million, and other municipal revenue, which increased by $259 million.

Table 1. Benefits included in the Company's BCA analyses

Company's Claimed Benefits	February 2025 BCA	January 2026 BCA	March 2026 BCA
1) New wages from job creation	Yes	Yes	Yes
2) New revenues to municipalities and schools from Payment in Lieu of Tax (PILOT) /Host payments	No	Yes	Yes
3) New sales tax revenue from the project's electrical usage	Yes	Yes	Yes
4) New revenues to the Town of Alabama Fire District due to annual fire district fees	No	No	Yes
5) Company investments in electrical infrastructure needed to support the project	No	No	No
6) Project fees being reinvested by GCEDC to support projects that benefit Genesee County	No	No	No

Data sources: 1) STREAM Cost Benefit Calculator, February 2025; 2) STREAM Cost Benefit Calculator, February 2026; 3) STREAM Cost Benefit Calculator, March 2026.

Table 2. Comparison of Company's CBA analyses (millions $)

		February 2025 BCA	January 2026 BCA	March 2026 BCA	Jan 2026 to Mar 2026 Comparison
Costs	Property Tax Exemption	$0	-$20	-$58	-$39
	Sales Tax Exemption	$463	$769	$1,432	$662
	Mortgage Recording Tax Exemption	$9	$31	$31	$0
	TOTAL	**$472**	**$781**	**$1,405**	**$624**
Benefits	Payroll	$874	$1,979	$1,139	-$840
	Property Tax Revenue	$103	$207	$206	-$1
	Sales Tax Revenue	$12	$28	$218	$190
	Income Tax Revenue	$134	$89	$51	-$38
	Other Municipal Revenue	$82	$345	$604	$259
	TOTAL	**$1,205**	**$2,647**	**$2,217**	**-$430**

Data sources: 1) STREAM Cost Benefit Calculator, February 2025; 2) STREAM Cost Benefit Calculator, February 2026; 3) STREAM Cost Benefit Calculator, March 2026.

One of the primary benefits of the project touted by the Company (and represented in publicly available information regarding the costs and benefits of data centers[25]) are STREAM's PILOT/Host payments to Genesee County, the Town of Alabama and the Oakfield-Alabama School District. STREAM notes that it has "agreed to pay $7 million in base annual PILOT/Host payments," which will total "more than $283.9 million in new revenue over 30 years"—$84.8 million more than what their waived property taxes would have

[25] See, for example: 1) S&P Global. Available at: March 24, 2026. "Everywhere, All At Once: How The Growth Of Data Centers Could Carry Risks For U.S. Local Governments." Available at: https://www.spglobal.com/ratings/en/regulatory/article/everywhere-all-at-once-how-the-growth-of-data-centers-could-carry-risks-for-us-local-governments-s101673051; 2) Gorey, J. October 17, 2025. "Data Drain: The Land and Water Impacts of the AI Boom." Lincoln Institute of Land Policy.

been over the same period (or $58.3 million on a discounted basis).[26] This benefit is actually included as a negative cost line item in the Company's BCA (see the "property tax exemption" line in Table 2).

However, the Company has also requested a local sales tax abatement of 4 percent, which amounts to a $1.4 billion cost in the Company's most recent CBA ($662 million more than the same cost line item in the Company's January 2026 CBA). STREAM has also requested a 0.5 percent abatement of the mortgage recording tax, which amounts to a $31 million cost in both 2026 versions of the CBA.[27] Taken together, these two costs are **25 times greater** than the benefits provided by the PILOT/Host payments.

STREAM's CBAs are insufficient to determine the true costs and benefits of the proposed project

The CBA results provided by STREAM are incomplete and insufficient to determine whether the proposed project would provide net benefits for the local community for multiple reasons. Key concerns with STREAM's CBA analyses include:

- **Lack of supporting materials:** The Company does not provide supporting materials to demonstrate the costs or benefits of the project. For example, STREAM fails to provide materials that support the Company's assertion that the project will create 6,000 temporary construction jobs over five years. This failure to provide support materials does not meet the standards expected in a public decision-making process.
- **Significant changes in cost and benefit line items without explanation:** The Company's CBA analysis and results changed significantly between each version of the CBA, but the Company has not provided any explanation regarding the reasons for those changes. For example, the Company fails to explain why the March 2026 CBA included a new benefit line item—"ongoing sales tax revenue on electricity," a benefit valued at $201.6 million—that was not included in the January 2026 CBA.
- **Inflated job benefits:** The Company's job creation estimates exceed values found in publicly available data and information. The Company anticipates that the project will create 7,766 direct and indirect temporary jobs and 223 direct and indirect permanent jobs, and makes payroll benefit estimates on that basis. However, the U.S. Chamber of Commerce Technology Engagement Center has found that a "typical large data center" creates many fewer jobs: approximately 1,700 direct and indirect temporary jobs and 157 direct and indirect ongoing jobs.[28] Similarly, The Brookings Institution determined that "even in large-scale centers, construction jobs often total around 1,500 skilled trade workers and 100 operational jobs."[29]

[26] Stream US Data Centers Project - Cost Benefit Calculator. March 2026.
[27] Stream US Data Centers Project - Cost Benefit Calculator. March 2026.
[28] U.S. Chamber of Commerce Technology Engagement Center. 2017. *Data Centers – Jobs and Opportunities in Communities Nationwide.* Available at: https://www.uschamber.com/assets/documents/ctec_datacenterrpt_lowres.pdf. Page 11.
[29] Lee, N. T., West, D. M. November 5, 2025. "The future of data centers." Brookings.

- **Missing costs:** All three of the Company's CBA analyses fail to include any costs beyond sales and mortgage tax exemptions (property tax exemptions are listed as a cost line item, but are negative, meaning they reflect the projected benefit of PILOT/Host payments as described above). The Company has failed to identify or assess various potential costs associated with the project, including: effects on property values, effects on tourism and recreation, costs associated with air pollution from the proposed facility's backup diesel generators, utility bill impacts, public health impacts, the cost of public infrastructure required for the project, or the local disturbances associated with project development such as placing cables and fiber optic lines.

STREAM's provision of comprehensive information regarding the anticipated costs and benefits of the proposed project to ensure that local communities—including Town of Alabama residents and the Tonawanda Seneca Nation—is essential to good public decision making and to making sure impacted communities have an accurate understanding of the costs and other risks to which they are exposed. The remainder of these written comments describe potential costs of the proposed project that the Company has omitted in its CBA analyses or its various application materials to date.

Costs omitted (and benefits inflated) in STREAM's CBA

All three of STREAM's CBA studies failed to include key project costs, such as capital costs like construction costs or equipment costs, as well as other potential costs of the project, such as higher utility bills, impacts of increased water consumption, costs associated with air pollution from the proposed facility's backup diesel generators, noise pollution, impacts on property values, or effects on green spaces, tourism, and/or recreation. Given the limited timeline in which to produce these comments ahead of key decision-making regarding the proposed project, these comments address two potential costs that the Company failed to consider—effects on property values and effects on tourism and recreation—and provide a revised estimate of the Company's claimed job creation benefit.

Effects on local employment

STREAM's job creation estimates exceed values found in publicly available data and information. The Brookings Institute has found that the "employment benefits of data centers are variable and often overstated," and highlights the need—particularly in rural communities—to focus on job quality, duration, and how to make new positions attainable for residents.[30] There is broad consensus that the primary local benefit of data centers is tax revenue and PILOT payments because data centers do not create many permanent jobs and the temporary jobs created during their construction phase are of limited benefit to local communities.[31]

AEC reviewed publicly available literature regarding data center job creation estimates, which is summarized in Table 3 below. STREAM estimates that the proposed project will create 12 direct,

[30] Pipa, A. F., Aley, A. March 2, 2026. "The local implications of data centers for rural communities in the US."
[31] Gorey, J. October 17, 2025. "Data Drain: The Land and Water Impacts of the AI Boom." Lincoln Institute of Land Policy.

temporary jobs per megawatt (MW) and 3.5 indirect, temporary jobs per MW—estimates that are much higher than other publicly available values from the literature. In recent studies of data center job creation, direct, temporary job creation estimates range from 0.7 to 6.4 jobs per MW and indirect, temporary job creation ranges from 0.4 to 1.6 jobs per MW.

Table 3. Data center job creation estimates (jobs per MW)

		Direct	Indirect

Available at: https://www.rowanfrederick.com/faqs.

If STREAM's temporary job creation estimates are corrected to reflect average publicly available estimates, the proposed project would create 1,898 direct temporary jobs (about 4,100 fewer than the Company claims) and 452 indirect temporary jobs (about 1,300 fewer than the Company claims). STREAM also estimates that the proposed project will create 0.3 direct, ongoing jobs per MW and 0.1 indirect, ongoing jobs per MW: These estimates are more in line with other publicly available estimates from the literature. It is important to note that permanent jobs are usually of greater benefit for local populations than temporary jobs, though STREAM has not provided any information about ensuring that job creation benefits local populations specifically.

According to the Company's most recent BCA analysis, STREAM will receive $1.4 billion in tax exemptions from GCEDC. If the Company's ongoing job creation estimates are correct, STREAM would be given an astounding $8.3 million in tax breaks per direct, ongoing job created. Across all of the publicly available data and information reviewed, experts broadly agree that data centers do not require many employees once they are built, with The Brookings Institution noting that is because they "largely consist of file servers and networking equipment," which means that "other community benefits may be more salient for

regions expanding their data center footprint."[32]

Effects on property values

Based on a review of publicly available information, the effect of data centers on property values does not appear to be uniformly negative or positive—the answer to "how will a new data center impact the property values of the residents who live near it?" is, ultimately, "it depends." In high-growth real estate markets, home prices have continued to rise despite new data centers coming online nearby.[33] However, potential buyers consider home prices along with other factors, such as utility costs, light pollution, and ambient noise, when deciding whether a community is attractive.[34] In addition, rising property values can price out first-time home buyers and can be negative for longtime and/or lower-income homeowners due to rising property taxes.[35] Ultimately, the proximity of a data center to one's home—and the buffers that exist between it and the community, such as noise mitigation and landscaping—is the most important variable in terms of its effect on property value and attracting potential buyers.[36]

In addition, evidence suggests that the methods used to assess the property value of data centers themselves are inconsistent across jurisdictions, and that assessors often lack the specialized expertise in data center valuation needed to assess their fair market value effectively. For example, the value of data centers is derived from more than the land they sit on—data centers require extensive electric and cooling infrastructure to operate as well as extensive and valuable technological equipment. However, the speed at which technology becomes obsolete calls for rapid depreciation of specialized technological equipment, which should be considered separately from the value of real estate.[37] While technological equipment can be removed and, therefore, considered separately from the value of the real estate, some of the infrastructure needed to operate a data center is integrated into the building in such a way that removing it is cost-prohibitive or impossible.[38] These complexities pose valuation challenges that require a more nuanced, specialized valuation approach. It is important to note that—if STREAM's proposed data center's assessed property value is incorrect—that would impact the ratio of the Company's PILOT/Host payments

relative to their waived property taxes.

Effects on tourism and recreation

In Genesee County, tourism and recreation are an integral part of the community and economy: STREAM's proposed data center borders the Tonawanda Seneca Nation's ancestral forest, The Big Woods, and is in close proximity to various wildlife preserves, including the Iroquois National Wildlife Refuge, the Tonawanda Wildlife Management Area, and the Oak Orchard Wildlife Management Area.[39] Empire State Development of New York State's *2024 Tourism Economics Report* found that, in Genesee County, visitors spent $144.5 million in 2024, generating about $331.1 million in direct personal income for county residents, creating about 11,000 direct jobs and about 5,000 indirect jobs, and generating $8.8 million in local tax revenue—equal to $665 in tax savings per household.[40] It is crucially important to understand that STREAM's proposed data center may negatively impact local tourism and recreation—for example, the project could diminish local water bodies like the Oak Orchard Creek or Tonawanda Creek, and create noise and/or light pollution that permeates into local wildlife preserves. As with so many other communities where proposed data centers are to be located, Tonawanda Seneca Nation fear STREAM's proposed data center "could harm the old-growth forest they rely on for medicinal plants and hunting, primarily due to 24/7 lights and noise emitting from the facility."[41] In July 2025, the County of Orleans Department of Tourism (Orleans County is located directly north of Genesee County) prepared a statement at a community meeting regarding the proposed data center that detailed their concerns regarding the impact of the proposed data center on the Oak Orchard River and the impacts that would create for Lake Ontario and associated tributary waters, noting that "the good health and non-impacted water of the Oak Orchard River is vitally important to the fishery and boating interests which support the tourism economy for Orleans County."[42]

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Sileem Farghaly

Subject: Stream Data Center Commment

To the members of the GCEDC,

My name is Brenna and I am a western NY native. I grew up in Batavia, went to high school at Notre Dame, and college at GCC. I currently reside in Rochester but my parents and most of my family still live in Batavia, so I am home often.

I am staunchly against the building of the Stream Data Center in Alabama, NY. You've gotten thousands of other comments from other concerned citizens and community members, and I'm sure it's exhausting to go through. I hope you can appreciate the effort so many people in the community are putting towards caring about their environment and sustainability. I for one have so many great memories of exploring the Iroquois National Wildlife Refuge through my adolescence, and I have serious concerns about the impact the data center will have on it. That's beyond the potential strain on the power grid, local residential property impact, the outlook on AI being ridiculously hasty and overblown, etc.

As a member of the Town of Chili Conservation Board, I have fielded community discourse regarding environmental impacts for proposed projects similar to data centers. They are largely reviled. I strongly urge the GCEDC to consider the weight of the discourse from the local community, the Seneca Nation, and surrounding WNY residents. I grew up with a mall in Batavia that everyone thought was going to revitalize the area, and within a few decades it became a blight to the city. Please don't make the same mistake with this issue.

Thank you for your time.

- Brenna Wilkes-Peabody

Giving $1.46 billion dollars in tax abatements provides at a cost of $ 11.7 million for each of 125 jobs that would be created makes no economic sense.

Sincerely,

streampublichearing@gcedc.com

The life span of data centers is estimated at 5-10 years. A profit is made by Multinational Companies, Big Tech, and Private Equity . They make a profit and. Leave, then the community is left to deal with their mess forever.

Sincerely,

The project will transform the lives of those living in the GLOW region in a NEGATIVE way with higher electrical rates, lower property values, air pollution, water pollution, 24/7 low frequency noise that travels for miles, impacts to wildlife, 24/7 light pollution. And very few jobs.

Sincerely,

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

No Data. Center!!!

Sincerely,

MaryAlice Bagwell

There is insufficient evidence that this data center will bring economic wellbeing or serve the interests of the communities whose resources it will use and taxpayers who it will be funded by. Residents near and far from this proposed data center oppose it for well evidenced reasons such as economic and environmental infringement. The demands included are necessary steps in recognizing the wellbeing, rights, safety, and wishes of constituents of this region.

Sincerely,

Fen Stanczyk

Subject: WE DO NOT WANT THE STAMP DATA CENTER

To Whom it may concern,

We do NOT want the STAMP data center in our community. It is sickening to see this continue to be up for debate. Allowing this data center to come here directly harms our community, the farmers, our family and friends, it directly impacts an already marginalized community (Tonawanda Native Americans), and will destroy our environment. The environment in Genesee county is what led me and my family to live here. Adding an insanely massive strain to our power grid, warming our creeks and water supply, causing sounds that disrupt animals and people alike... is unacceptable. Allowing the STAMP project here is directly sabotaging every single individual's ability to obtain peace in their homes. This data center is absolutely playing our town as fools and taking advantage of the fact we are an older farming community. Please do your job to PROTECT your people, PROTECT our land. WE DO NOT WANT THIS DATA CENTER IN OUR COMMUNITY!!!! Please stand up and protect our rights to live peacefully in our homes. Please stand up and protect our environment, wildlife, and water supply. Please stand up and protect your community's interests, not some company's. Please make this right.

Best Regards,
Mia

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

As a personal note, this project will support labor in the area to have good paying jobs. We will keep the work local and hire local workers. As a union steamfitter, this project will hire people making a good living and support local businesses. Please consider the economic benefit to your county as well as the greater western NY area. UA local 22 steamfitters and plumbers supports this project, which is a one in a generation opportunity. In my 32 years as a steamfitter, this is the opportunity to make many people in the county enriched. It will be built, either here or elsewhere. Take the opportunity and reap the benefits for your entire county!

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Geoffrey Smith

NYS, GCEDC - you have proved that in 20 years of stewarding the land of the STAMP site, that you don't care for your own NYS local residents, for our WNY environment, for especially Indigenous PEOPLE who don't have a casino., you can steal from at will.

I'm also concerned about heat islands that data centers are known that cause. Tell me how that will not occur at full build out.

I'm concerned also about construction at STAMP - will there be construction camps at the site for 1-5 years? (i.e. - man camps).

I'm concerned over the fact that no closed loop system data centers really exist. Prove to me that there will not be "blow down" periodically into acqifers or land with forever chemicals.

Once you sell to the developer, how do we trust them to keep following through. You the GCEDC, have broken our trust by trying to sneak in your waste water line in the Iroquois Wildlife Refuge, without Orleans County knowledge, like you're a king.

Then I find out Kathy Hochul's husband's Empire State Development Company paid to have the substation built for this site. It's 43.2 miles from Niagara Falls, whatever the marker was. But because Ms. Hochuls investments must be brought to fruition, Empire State Development NYSPA extend the line-3.2 miles. Money means everything-everything else is shit.

Give us our land. Don't help to become the next hanondaguyas, TOWN DESTROYER. This goes down either way in history.

Sincerely,

Melissa Smith

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

WE do NOT WANT

Sincerely,

Donna I Szczygielski

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

All that electricity this data center will consume will be converted to heat. One way or another that heat will be transferred/emitted to the air/land/waters in the surrounding environment. The third law of thermodynamics: energy cannot be created or destroyed, but can only be transferred,

Studies indicate that the temperatures around data centers can increase 15°F. These temperature increases can affect the micro climate in the areas near by.

A question to be asked is: would a significant micro climate change west of the new york states largest solar facility adversely affect the weather around the data center and weather further downwind?

What will the local thermal signature increase going to be once the data center is fully operational, compared to before it was constructed?

If/when the data centers micro climate interferes and reacts with all of the micro climate changes from the downwind massive solar facilities, what will the result be? I doubt it will be beneficial to anyone living near the data centers or down wind of the solar facilities.

Who will assume the liability when hundreds of millions of dollars of damages are incurred to the solar panels, agricultural crops and residential areas? Will it be the town and the gcedc that signed off on approving the data center or will it be the tax payers?

I think it would be wiser not to approve this site, than risk being wrong by building it,

Marty Stucko
Elba

Sincerely,

Marty Stucko

Subject: Opposition to proposed financial incentives for STREAM data center

GCEDC:

I want to reiterate my opposition to the proposed STREAM Data Center at the STAMP site and the proposed financial incentives. As I said, I am a construction materials testing technician who has worked at several construction sites in WNY, including Genesee and Orleans counties, in my seven months in this role. I understand the importance of construction and I appreciate my job, but I personally prefer to work on construction projects that contribute to positively to communities and do not infringe on the sovereignty and way of life of our indigenous neighbors. While I can only speak for myself, I could imagine that trade union workers do not want to infringe on indigenous sovereignty either. I'm sure they do not want to contribute to the inevitable environmental destruction this data center will cause. I imagine they want JOBS, not necessarily this job. I understand this is speculation, but consider the supportive comments from the trade union workers. How many said they badly want this data center for a reason other than how it creates jobs and apprenticeships?

I said at last night's meeting (Thursday, April 16th, 2026) that all construction and development comes with some environmental cost, and yes, most construction projects face some opposition, but this inevitably is no excuse to throw your hands up and do whatever you want. You need to take this inevitability to heart and let it motivate you to reduce harm and maximize community benefit. Your community has spoken: you've not done that. By incentivizing this project, you're jeopardizing the wellbeing of the environment. You're jeopardizing the health of the community. You're continuing a 250+ year legacy of broken treaties and cultural destruction against the the indigenous people of this continent. Rather than putting immense resources into trying to push this on a community that does not want it (and into potential future legal battles relating to the project), put those resources into developing something the community needs. Two people mentioned the need for a dialysis center. Give construction workers a project to work on that they'll still be proud of decades from now. You have immense power and a unique opportunity to rebuild trust with your community. Fulfill your moral, ethical, and legal obligations to the Tonawanda Seneca Nation, the Town of Alabama, and Genesee County. Refuse the incentive package.

Thank you.

Jenna E. Diamico

Subject: AI Data Center

Good afternoon,

I wanted to send in my comments but mainly opposition to the STREAM Data center project.
They claim they have taken noise, electricity and pollution into consideration and their influence would be minimal. But AI data centers all over the US have been driving up electricity costs for citizens that pick up the burden, polluting waterways and disturbing wildlife. Their research on paper can not compare to the real life proof of towns that have already been affected by this exact scenario.

The proposed site is extremely close to the Tonawanda Seneca Nation and the Iroquois National Wildlife Refuge. We already are pushing animals back farther and farther every time we expand housing developments or cut down more trees. These are not things that we can undo to the earth after we've destroyed it with ai and data centers. This isn't worth this destruction. And this is too costly for us to take the risk and realize they were wrong. The immense damage will already be done.

Is the technology this center is offering us worth more than protecting our waterways, animals and our only home, earth. The answer is no.

I truly hope you will take the thoughts of all the citizens and everyone who has signed the opposition petition and stop this project before it's too late. Thank you for your time.

I am writing today to reiterate my request that subsidy money be put forth for projects that help the community. The dialysis clinic in Batavia is closing which will over burden local people a lot. A session that can last up to 5 hours will now 8nclude a 45 minute drive each way to get this lifesaving and weekly blood filtering. The other clinic is going to be so over burdened it wont be an option for most as many's decisions ust lie wheretheir insurance is accepted.

Sincerely,

99 MedTech Drive
Batavia, New York 14020
cc: gcedc@gcedc.com

Good evening,

My name is Chris Murawski and I am the Executive Director of the Clean Air Coalition of Western New York. I am submitting these comments on behalf of Clean Air Coalition. I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

We work with residents and workers of environmental justice communities throughout our region to organize and win public health and environmental justice campaigns.

On behalf of Clean Air's members and supporters I want to say we oppose the financial incentives request submitted by STREAM US Data Centers and Apollo Global Management for their proposed data center complex at STAMP. We demand that GCEDC follow all of NYSDEC's recommendations with respect to the SEQR environmental review process. We call on GCEDC to reject the incentives application from STREAM US Data Centers and Apollo Global Management.

The project will have regional and statewide environmental justice impacts. With the addition of 500MW of power demand this project will certainly require outdated polluting infrastructure brought back online to meet these demands. Many of these generating facilities are in what NYS considers Disadvantaged Communities which already suffer disproportionate burden from air pollution. Clean Air has a campaign in North Tonawanda NY in which an outdated gas fired power plant was re-fired to power a data center increasing emissions and also has well documented effects from noise pollution on residents and has led the city has passed a 2 year moratorium on the development of any more of these type of data centers.

STAMP is an extremely inappropriate site for a data center, due to it's remote location, lack of infrastructure, and adjacency to the Seneca Tonawanda Nation and

sensitive protected environmental areas. Further, all the proposal includes plans for emergency diesel backup generators, and greenhouse gas emissions projected into the megatons annually. The stated number of 12 diesel backup generators is 90 % less than the conventional amount of back up generators deployed for a data center of this size according to analysis by the Environmental Protection Network. There needs to be more information provided regarding the disparity in the proposed 12 generators and the standard amount of generators usually deployed at comparable projects. Is this information accurate or is this a misrepresentation?

This Project is an egregiously bad investment for Genesee county and Western New York. The requested subsidy would be among the largest ever awarded to an economic development project and the largest ever awarded to a data center in the US. $11 Million per job for the 125 jobs created is just a staggering number to ponder. We realize that all pots of money are not equal but just for some examples of investments that would actually benefit residents of Genesee County, what would we get if we took that $11 million dollars for a single job and invested it in energy efficiency and clean energy upgrades. With that amount of money you would be able to insulate 1100 single family homes. You would also create 50 jobs in the process in the residential construction industry. According to a study it is an average of 10-12 jobs per $1 Million invested in energy efficiency. So 50 is cutting that number in half for a very conservative estimate. A recent analysis from Food & Water Watch, a nonprofit tracking corporate overreach, found that in Virginia, the investment required to create a permanent data center job was nearly 100 times higher than other manufacturing projects.

We also echo the demands of the Tonwanda Seneca and ask the following:
GCEDC must conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP
GCEDC must conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012
GCEDC must ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, NYS DEC and the State Historic Preservation Office on those impacts
GCEDC must conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;
GCEDC must require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

Subject:	Public Comment Submission: BUFA Double Reed Project (STAMP Site, Alabama, NY)
Attachments:	TEA Submission for STAMP Data Center Public Comment (April 2026).pdf

Dear Genesee County Economic Development Center,

Please accept the attached public comments submitted by Tribal Energy Alternatives (TEA) regarding the BUFA Double Reed data center project proposed for the STAMP site in Alabama, New York.

These comments are submitted for inclusion in the public record pursuant to Article 18-A of the New York General Municipal Law and the State Environmental Quality Review Act (SEQRA) process.

Thank you for your consideration. Please confirm receipt of this submission at your convenience.

Sincerely,

Catherine Zingg (*Ho-Chunk Nation*) | Tribal Policy Director
Tribal Energy Alternatives
Remote | Based in New York
c: 480-340-5871
www.tribalalternatives.org

To the Genesee County Economic Development Center (GCEDC):

My name is Catherine Zingg, an enrolled member of the Ho-Chunk Nation, and Tribal Policy Director at Tribal Energy Alternatives (TEA), the Native-led affiliate of GRID Alternatives. TEA works in partnership with Tribal Nations across the country to advance distributed energy solutions that reduce energy burden, increase resilience, and ensure participation in the clean energy transition in an equitable way.

We submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law and the State Environmental Quality Review Act (SEQRA) for BUFA Project Double Reed, the proposed data center complex by STREAM US Data Centers for the STAMP mega industrial site in Alabama, New York.

TEA is committed to the just implementation of New York's Climate Leadership and Community Protection Act (CLCPA), with a focus on ensuring that clean energy deployment delivers tangible benefits to disadvantaged and Tribal communities. The proposed data center lies within a designated Disadvantaged Community, as designated by the Climate Justice Working Group, triggering clear statutory obligations under the CLCPA. Section 7(3) of the law requires that state agencies and affiliated authorities ensure that their decisions do not disproportionately burden these communities.

At the same time, large-load infrastructure such as data centers raises significant concerns related to cost allocation, grid impacts, water use, and long-term energy planning. Without appropriate safeguards, these projects risk shifting system costs onto existing ratepayers, exacerbating energy burdens, and diverting resources away from distributed energy investments that directly benefit local communities.

Given the threats posed by this project to the Tonawanda Seneca Nation whose lands and community are situated within the affected area, and in recognition of Tribal sovereignty and self-determination, we strongly oppose the financial incentives request submitted by STREAM US Data Centers. We further urge GCEDC to fully adhere to all of NYS Department of Environmental Conservations' recommendations with respect to the SEQR environmental review process.

Specifically, TEA calls on GCEDC to:

1. **Reject the incentives application** for Project BUFA Double Reed;
2. **Conduct a Supplemental Environmental Impact Statement (EIS)** specific to data center development at the STAMP site, reflecting the scale, intensity, and unique impacts of large-load facilities;

TRIBAL ENERGY ALTERNATIVES
A GRID AFFILIATE

3. **Conduct a comprehensive Supplemental EIS for the full STAMP site**, incorporating updated regulatory requirements, cumulative impacts, and material changes in site planning since the original 2012 analysis;

4. **Ensure that SEQRA review includes robust analysis of cultural, environmental justice, and sovereignty impacts** to the Tonawanda Seneca Nation, with meaningful consultation and input from the Nation, DEC, and the State Historic Preservation Office;

5. **Undertake a full lifecycle impact analysis** covering both construction and operations phases, including the projected multi-year buildout timeline;

6. **Require independent, publicly available studies** on noise, air emissions, water use, geotechnical risks, and traffic impacts prior to completion of SEQRA review;

7. **Hold a public hearing only after all materials, studies, and application components are finalized and accessible**, ensuring meaningful public participation.

Project BUFA Double Reed presents a significant risk to the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation. It also threatens New York's climate and equity goals, particularly if public incentives are used to support infrastructure that does not deliver direct benefits to disadvantaged or Tribal communities.

In closing, we oppose the financial incentives request submitted by STREAM US Data Centers, urge GCEDC to follow all DEC recommendations under SEQRA, and call for rejection of the incentive application.

Sincerely,

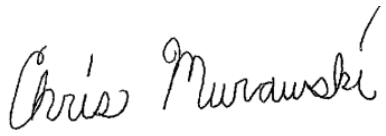
Catherine Zingg (Ho-Chunk Nation)
Tribal Policy Director
Tribal Energy Alternatives
11211

ORGANIZING *for* HEALTH *and* JUSTICE

GCEDC must Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public

I reserve the right to submit further comments on the April 6 revised SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts. There was not enough time for a further review.

Respectfully submitted,



Chris Murawski, Executive Director
The Clean Air Coalition of Western New York

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

I strongly oppose this data center and the absurd tax incentives of fraudulent corporate welfare. The environment has already been negatively impacted by the ignorance of people who thought an industrial site next to a wildlife refuge and reservation was a good idea. This will multiply the foolishness by 1000. Vote no!!!

Sincerely,

Jason MICHALSKI

citizenactionnny.org
www.citizenactionny.org; www.ppefny.org

Sent by email to: streampublichearing@gcedc.com
To the Genesee County Economic Development Center (GCEDC):

My name is Ethan Gormley, and I am the Legislative Coordinator for Citizen Action of New York.

Citizen Action of New York is a membership-based organization with chapters across New York State, including a chapter in Rochester. For decades, Citizen Action of New York has fought climate change and planet-warming emissions from big polluters and energy-intensive industries. As a member of the steering committee of NY Renews, a large climate-justice coalition of roughly 400 member organizations, we are committed to ensuring that the Climate Leadership and Community Protection Act (CLCPA), enacted in 2019, is implemented.

We are submitting the following comments pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed, the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

In order to effectively implement the CLCPA, New York must safeguard its residents, particularly those in disadvantaged communities, from planet-warming emissions and higher utility bills resulting from polluting, energy-intensive industries. Per Section 7(3) of the 2019 Climate Law, in considering and issuing permits, licenses, and other administrative approvals and decisions, all state agencies, offices, authorities, and divisions shall not disproportionately burden disadvantaged communities.

The threats posed by this proposed date center project have the potential to negatively impact the Tonawanda Seneca Nation, which territorially overlaps with one or more disadvantaged communities, as designated under the CLCPA. Facing those potential threats and given our overarching respect for Indigenous sovereignty, we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of NYS Department of Environmental Conservations' recommendations with respect to the SEQR environmental review process, and call on GCEDC to:

- Deny the incentives application.
- Provide greater transparency around this large, energy-intensive project by providing:
    - a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;
    - a Supplemental EIS for the entire STAMP site that properly accounts for new laws and regulations, as well as other changes, including changes in plans for the site since 2012.
- Utilize the SEQR process and review to:
    - Prioritize and address cultural and environmental justice impacts on the Tonawanda Seneca Nation, which must include input from the Nation, DEC and the State Historic Preservation Office on those impacts;

    - Detail the project's impacts during the lengthy construction phase and the operations phase.
- Conduct publicly available independent studies to address issues affecting quality of life, such as noise, air emissions, geotechnical analysis, traffic, and water impacts.
- Require a public hearing–prior to the completion of the SEQR review–but only once all application materials and studies are finalized and made publicly available.

For the reasons stated above, Citizen Action of New York urges the GCEDC to protect the quality of life, well-being, and cost of living of all residents of New York State, including the citizens of the Tonawanda Seneca Nation, while abiding by the CLCPA. If you wish to discuss this matter, I may be reached at egormley@citizenactionny.org.

Sincerely,

Ethan Gormley
Legislative Coordinator
Citizen Action of New York

Grandmothers Council of Niagara

April 17, 2026

TO: Mark Masse and GCEDC Board

FROM: Grandmothers Council of Niagara

RE: Comments on Data Center Proposal

Submitted by STREAM US Data Centers and Apollo Global Management

The Grandmothers Council is submitting additional comments in response to the revised SEQR submission by STREAM US on April 8 regarding the proposed data center at STAMP.

Our conclusion from the first submission remains: this data center project must be abandoned and the entire STAMP project retired. What to do with the land? Because there has already been significant destruction of the ecology of the 'park,' restoration or ecologically based activities is warranted. In other words, ReThink STAMP.

But **specifically for this April 8, 2026 submission**, here are the recommendations of the Grandmothers:

1. Because of scale, scope and purpose of the project, GCEDC MUST DO A SUPPLEMENTAL EIS! Nothing like this has been considered in any of the founding or subsequent documents. The full impact of this project must be evaluated and discussed especially considering energy, water, ecology, and impact on the community and Tonawanda Seneca Nation; the proposed project in light of current laws such as the CLCPA; and provide detailed plans for decommissioning and dismantling of the facility.

2. ALL FINANCIAL INCENTIVES AND SUBSIDIES MUST BE DENIED. The richest corporations in the U.S./globe, should not be taking funds from rural agricultural communities and the state of New York. If they can't afford to do the project, they should not be considering it.

3. The proposal has not been released in its entirety and there has not been sufficient time to review. WE RESERVE THE RIGHT TO CONTINUE TO MAKE COMMENT FOR THE RECORD.

WE ALSO JOIN IN AND SUPPORT THE COMMENTS ON THE APPLICATION SUBMITTED TO GCEDC BY THE TONAWANDA SENECA NATION DATED APRIL 16, 2026 AND THE SIERRA CLUB ATLANTIC CHAPTER, DATED APRIL 17, 2026.

The Grandmothers Council of Niagara's work is to protect life on Earth. We ask of all actions and practice today: **Will this action ensure that future generations will have a thriving and beautiful planet as a home?** Earth has been bequeathed to us by our ancestors, and it is our task to see that it continues for our children and their children. Although we are concerned with the entire planet, our home is Western New York, a rich and fertile place with bountiful waters, rich lands, productive ecologies and diverse communities of people.

The STAMP project, the Scientific and Technology Advanced Manufacturing Park, established in 2012 by the Genesee County Economic Development Center on 1250 acres near Alabama, New York, was a mistake. Over 20 years it has not established a single business at this "strategic location" in the middle of agricultural and natural protected areas adjacent to the Tonawanda Seneca Nation. Clearly, this is not a good site for advanced manufacturing, and neither is it appropriate for a massive speculative data center.

By what right do you believe you should be able to radically alter the life space of so many others – people and non-humans? You have squandered millions of dollars in this effort, state and federal, taxpayer funds. Given GCEDC's disregard for the community, the scale of intervention, its harm to the adjacent lands of the Tonawanda Seneca Nation, and its interruption of the ecological process of the wetland complex, we strongly oppose the imposition of a data center or advanced manufacturing at the site.

And finally, we urge you to disband the Genesee County Economic Development Center. IDA's are supposed to provide economic support for this community, but your 'client' does not reside in Genesee County and the community's interests have not been your concern.

Grandmothers Council of Niagara

Lynda Schneekloth, Facilitator

Sincerely,

streampublichearing@gcedc.com

On the ground — and at the table.

To the Genesee County Economic Development Center (GCEDC):

Founded in 1991, the New York City Environmental Justice Alliance (NYC-EJA) is a non-profit, 501(c)3 citywide membership network linking grassroots organizations from low-income neighborhoods and communities of color in their struggle for environmental justice. NYC-EJA empowers its member organizations to advocate for improved environmental conditions and against inequitable environmental burdens by the coordination of campaigns designed to inform City and State policies. Through our efforts, member organizations coalesce around specific common issues that threaten the ability of low-income communities of color to thrive. NYC-EJA is led by the community-based organizations that it serves.

We submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

Our organization is committed to the just implementation of the Climate Leadership and Community Protection Act. The proposed data center lies within a Disadvantaged Community, as designated by the Climate Justice Working Group, which subjects this project to review under the CLCPA. Per Section 7(3) of the law, in considering and issuing permits, licenses, and other administrative approvals and decisions, all state agencies, offices, authorities, and divisions shall not disproportionately burden Disadvantaged Communities. Given the threats posed by this project to the Tonawanda Seneca Nation which lies within this Disadvantaged Community, and our overarching respect for Indigenous sovereignty, we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of NYS Department of Environmental Conservations' recommendations with respect to the SEQR environmental review process, and call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

New York City Environmental Justice Alliance
462 36th Street, 3F, Brooklyn, NY 11232 | www.NYC-EJA.org
On the ground — and at the table.

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts;

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public; and

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation. It also threatens our Climate Law and violates the sovereignty and way of life of the Tonawanda Seneca Nation.

In closing: we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of DEC's recommendations with respect to the SEQR environmental review process, and call on GCEDC to reject the incentives application from STREAM US Data Centers.

Sincerely,

Celeste Perez

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

I demand that GCEDC follow all of NYS DEC's recommendations with respect to the SEQR environmental review process.

I have concerns regarding the GCEDC and STREAM US Data Centers & Apollo Global Mgmts ability to be good stewards of our land and respect the Tonawanda Seneca Nation along with the rest of our community.

This project was labeled from the start to be located in an undesirable location but GCEDC proceeded with the purchase of STAMP. GCEDC has already caused a 700 gallon spill of hydraulic oil in the middle of the Wildlife Refuge in an attempt to horizontally drill and then even though it was against their ROW permitting the began to utilize open trenching and ultimately had their permits pulled by the US Fish and Wildlife Northeastern Region.
STREAM US continues to state the infrastructure is in place and that helps to solidify their plans to build a DATA CENTER in the middle of a National Wildlife Refuge and alongside Native Lands. The reality is the substations aren't built at this time, there are no plans in place for sewer at this time, the water is not available and yet they continue to be less than transparent about these issues and think that the community is unaware of the dishonest practices. Even when the US Fish and Wildlife requested information it was not fully submitted, this is a continued practice by GCEDC and STREAM showing a pattern of deceptive behaviors.

STREAM US Data Centers is aware of the bald eagles on the proposed south property that they plan to develop and feel they are above the laws in place and can move forward without any repurcussions or consideration. Bald eagles have only been off of the Endangered Species list for approximately 19 years but remain Federally Protected animals and if this project is built the bald eagles will likely no longer flourish on the Iroquois Wildlife Refuge and surrounding wildlife areas, they could return to the Endangered Species list.

Our community does not support a data center, we are concerned about the negative impacts on our health, our land, our utility costs, the heat dome effect, pollution and the danger that could come to our first responders if an emergency occurred at the data center. Please support our community by saying no to the data center.

Sincerely,

Jennifer Durham

Subject: Data Centers

I'm sure many others will comment on the clean water crisis that is directly caused by the data centers that are already built and running, but I still think it is important to highlight as it is an incredibly important issue that shouldn't be dismissed.

The water used to cool the systems in data centers has to be clean, so it doesn't damage the systems. This means that only clean drinking water is used. When the water is used to cool the systems, it becomes dirty and can no longer be considered safe to drink. This is not an easily reversed action.

Drinking water is not the only thing that is polluted by data centers. The ground becomes uninhabitable for plants, negatively impacting local wildlife and farmland. The air pollution is bad enough that regularly breathing the air for miles around the data centers is unsafe and causes long term irreversible health issues.

Besides the environmental impact, data centers also are an ethical concern due to the nature of what is being powered. Generative AI can be useful and helpful in some situations, but it has become very clear that it is also incredibly dangerous. Just recently, X (formerly Twitter)'s built in AI "grok" was used millions of times to create child sexual abuse material (or "CSAM") and pornographic adult content with unconsenting persons. AI has directly fueled an influx of scam calls, messages, social media profiles, and other similar issues that people fall victim to every day.

There is not a single valid reason to build and/or operate a data center in New York State, or in any state in the USA. The only people who would benefit from this are those who do not care about the health and wellbeing of their fellow human beings, and the health and wellbeing of their own planet.

Thank you for your time,
Elliott Enos.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

As a teacher and academic with a long association with Haudenosaunee individuals and organizations, I am aghast but not surprised that once again corporate interests would target the indigenous communities and lands of New York for disporportionate suffering and harm. Please, NYS, adhere to your environmental justice framework and do not allow this to built in a way that produces this disproportionate suffering and harm to the Seneca people

Sincerely,

Adam TInkle

To: streampublichearing@gcedc.com
Subject: Stream Data Center Public Comment

I am writing to express serious concerns regarding the proposed Stream data center in Genesee County.

At its core, this project does not meaningfully benefit Western New York. Instead, it appears to be structured to extract value from the region while returning limited and uncertain gains to the communities affected.

The economic case presented is simply not convincing. Since the project requires over a billion dollars in incentives, it begins on the note of a direct cost to New York residents. To be clear, the financial viability of this project is predicated on taking money that otherwise goes directly to public services that would benefit New Yorkers. While proponents will highlight potential property tax revenues, there is no clear, binding plan for how those revenues will translate into tangible benefits for local residents. Will they reduce property tax burdens? Will they lower the cost of essential services? If data from around the country tells us anything, the answer will be no. And yet, these questions are unanswered, and the absence of specific commitments raises legitimate concerns about whether such benefits will materialize. The fundamental discordance between reality and the project as presented to the public strongly suggests that Stream is acting in bad faith.

Moreover, there is strong evidence from similar projects across the country that large data centers place significant strain on local utility infrastructure. It is known and established that the construction of a data center often results in **increased** costs for residents, whether it be higher utility costs (despite promises of the contrary) and construction of new power generation facilities to support the data center. There is a very real risk that households across Western and Central New York will bear higher expenses as a direct consequence of this development. Again, this shows that this project comes at the expense of the local community, not the benefit.

Beyond economics, the environmental cost of this project is significant and irreversible. The nearby wildlife refuge is not merely open land, it is a defining feature of our region. It contributes to our area's environmental health, supports tourism, and enhances quality of life for residents across Genesee County and neighboring communities such as Buffalo, Rochester, and Syracuse. Once compromised, there is no going back, these natural assets cannot be restored to their current state. Western New York is Exhibit A in poor and irreversible environmental choices. Let us not add another example to the list.

This issue extends beyond any single concern. It is not only about wildlife, though the ecological impact is substantial. It is not only about respect for the sovereignty and rights of the Iroquois Nation, though those considerations are critically important. It is not only about job creation, which in this case appears limited. And it is not solely about revenue, which is not destined for WNY, but rather for Stream.

Viewed collectively, the broad economic reality is clear: for Western and Central New Yorkers the benefits are the losers here. The costs (environmental, financial, and social) are significant and enduring, and the profits reside solely with Stream and not in our community.

I cannot offer stronger urging to carefully reconsider. To me, this project is an obvious no.

Subject: STOP STAMP

To whomever it may concern,

The members of the community continue to vocalize and voice their concerns. You continue to push back with more bribes. Such as cuts to sales tax and tax abatements, which is funded by the state from tax payer money. Do you see how that bribery isn't fitting?
You claim to give back to help those who make your process streamlined however the support for the data center being built within our county isn't there and you continue to refuse to acknowledge that.
In order for you to give those abatements the state has to have funds from taxes it takes from those residing within the state of New York available. They're already squeezing residents dry, leaving nothing left to give. You're pushing their narrative to tax the middle class more. Taking more from tax payers while claiming to benefit them and "give it back."
On top of the bribery for gym equipment with the school that requires consistent maintenance, upkeep and a monthly subscription for students to even be able to use. All of these things in turn will increase school taxes for property owners as well. Once again not benefiting the community you claim you're going to "make better."

We don't support the data center and we don't want you to build here. We don't need the increased population for 5 years with the union workers you claim to bring in with the data center build either. Our roads and infrastructure do not support them, only for them to leave in 5 years because thats the line of work they are in. They don't set up and settle down, that's not part of their career path.
Those who represent us aren't truly looking at the big picture, only the immediate dollar signs they think they will be winning with.

STOP THE DATA CENTER. SAVE OUR FARMLAND.

It is clear that the proposed data centers at STAMP would be economically and environmentally costly, and risky, investments for the county and state, which ultimately offer little in the way of community benefit. Local communities, including the sovereign Tonawanda Seneca Nation, have recognized this and voiced their opposition in force. To support the project would be in blatant disregard for their concerns. The whole state is watching!

Sincerely,

Chloe Wang

Re: Project Double Reed – Stream Data Centers, Alabama, NY

Greetings:

The New York Public Interest Research Group (NYPIRG) submits these comments with respect to the proposed Stream Data Centers complex at the Science, Technology, and Advanced Manufacturing Plant (STAMP) facility (the "Stream Data Centers Complex") pursuant to the hearing process under the State Environmental Quality Review Act (SEQRA) and General Municipal Law.

NYPIRG is a non-partisan non-profit organization that for more than 50 years has conducted research and advocacy on pressing public policy issues affecting the quality of life of New Yorkers. NYPIRG's primary areas of concern include public health, environmental quality, energy and climate policy, and civic engagement.

At the outset we are shocked and alarmed at the speed of the environmental review performed for the Stream Data Centers Complex. The SEQR Application was submitted on December 12, 2025[1] and the site plan application was submitted to the Town of Alabama Planning Board on January 12, 2026.[2] The proposed Stream Data Centers Complex is enormous – 90 acres of permanent facilities, including a 2.2 million square foot data center campus with three two-story buildings.[3] Another 40 acres would be used for construction and staging purposes.[4]

We note that the proposed Stream Data Centers Complex falls within a designated "Disadvantaged Community," conferring special protections under the Climate Leadership and Community Protection Act (the "Climate Law").[5] The Tonawanda Seneca Nation's territory is adjacent to the STAMP facility.[6]

Large data centers serve the internet economy for purposes like web services, processing transactions, cloud storage and the rapidly expanding Artificial Intelligence infrastructure. Because they depend on thousands of computers, servers, switching and storage equipment, they are incredibly energy intensive operations. As a

result of their tremendous energy demands, they can strain the grid system and divert energy that would otherwise serve other utility users, including residential households and ratepayers.

Since New York is being warned of medium term energy shortfalls and its aged electric grid is in desperate need of modernization, the strains of projects like the Stream Data Centers Complex warrant particular scrutiny.

The review to date of the Stream Data Centers Complex has been woefully inadequate. New York law demands a thorough consideration through review of environmental and public health impacts, starting with the state's constitutional guaranty of a "right to clean air and water, and a healthful environment," the Climate Law's obligations to move off of fossil fuels, and the environmental reviews required under the State Environmental Quality Review Act

NYPIRG believes the review falls short of these standards and the following steps must be taken to comply with state laws and policies:

- GEDC should not be sole lead agency for SEQR review; either New York State Department of Environmental Conservation ("NYSDEC") should be sole lead agency or should be co-lead to add expertise and integrity to the review process.
- A Supplemental Environmental Impact Statement (SEIS) identifying and evaluating the impacts of the siting of data centers at the STAMP facility must be undertaken.
- A fresh SEIS should be undertaken for the entire STAMP facility in light of the changes in law over the past decade, including the "Green Amendment" to the state Constitution and the Climate Law.
- The environmental reviews must include a full consideration of the cultural and environmental justice impacts on the Tonawanda Seneca Nation, necessarily with input from the Nation, DEC, and the State Historic Preservation Office on those impacts.
- Conduct a comprehensive SEQR review that assesses the environmental impacts of the construction and operations stages of the proposed project.
- Ensure the integrity of the SEQR process by requiring independent studies on anticipated impacts, including noise, air emissions, energy usage analysis, traffic, and water impacts be completed and made available to the public.
- To ensure informed, meaningful public participation, prior to the conclusion of the SEQR process, public hearings must be conducted.

In offering these comments, NYPIRG is keenly aware of the critical point the state is at in advancing its climate and energy policies and the impacts that site-specific decisions will have on the quality of life in New York – on their own and cumulatively. Our future depends on our being thoughtful, deliberate and weighing longer-term impacts with due consideration. We hope and trust that GEDC shares this perspective.

Thank you for your careful consideration of these comments.

Sincerely,

Eric Wood

Re: Project Double Reed – Stream Data Centers, Alabama, NY

Greetings:

The New York Public Interest Research Group (NYPIRG) submits these comments with respect to the proposed Stream Data Centers complex at the Science, Technology, and Advanced Manufacturing Plant (STAMP) facility (the "Stream Data Centers Complex") pursuant to the hearing process under the State Environmental Quality Review Act (SEQRA) and General Municipal Law.

NYPIRG is a non-partisan non-profit organization that for more than 50 years has conducted research and advocacy on pressing public policy issues affecting the quality of life of New Yorkers. NYPIRG's primary areas of concern include public health, environmental quality, energy and climate policy, and civic engagement.

At the outset we are shocked and alarmed at the speed of the environmental review performed for the Stream Data Centers Complex. The SEQR Application was submitted on December 12, 2025[1] and the site plan application was submitted to the Town of Alabama Planning Board on January 12, 2026.[2] The proposed Stream Data Centers Complex is enormous – 90 acres of permanent facilities, including a 2.2 million square foot data center campus with three two-story buildings.[3] Another 40 acres would be used for construction and staging purposes.[4]

We note that the proposed Stream Data Centers Complex falls within a designated "Disadvantaged Community," conferring special protections under the Climate Leadership and

[4] *Id.*

Community Protection Act (the "Climate Law").[5] The Tonawanda Seneca Nation's territory is adjacent to the STAMP facility.[6]

Large data centers serve the internet economy for purposes like web services, processing transactions, cloud storage and the rapidly expanding Artificial Intelligence infrastructure. Because they depend on thousands of computers, servers, switching and storage equipment, they are incredibly energy intensive operations. As a result of their tremendous energy demands, they can strain the grid system and divert energy that would otherwise serve other utility users, including residential households and ratepayers.

Since New York is being warned of medium term energy shortfalls and its aged electric grid is in desperate need of modernization, the strains of projects like the Stream Data Centers Complex warrant particular scrutiny.

The review to date of the Stream Data Centers Complex has been woefully inadequate. New York law demands a thorough consideration through review of environmental and public health impacts, starting with the state's constitutional guaranty of a "right to clean air and water, and a healthful environment," the Climate Law's obligations to move off of fossil fuels, and the environmental reviews required under the State Environmental Quality Review Act

NYPIRG believes the review falls short of these standards and the following steps must be taken to comply with state laws and policies:

- GEDC should not be sole lead agency for SEQR review; either New York State Department of Environmental Conservation ("NYSDEC") should be sole lead agency or should be co-lead to add expertise and integrity to the review process.
- A Supplemental Environmental Impact Statement (SEIS) identifying and evaluating the impacts of the siting of data centers at the STAMP facility must be undertaken.
- A fresh SEIS should be undertaken for the entire STAMP facility in light of the changes in law over the past decade, including the "Green Amendment" to the state Constitution and the Climate Law.
- The environmental reviews must include a full consideration of the cultural and environmental justice impacts on the Tonawanda Seneca Nation, necessarily with input from the Nation, DEC, and the State Historic Preservation Office on those impacts.

[5] The entire STAMP development is within a "Disadvantaged Community" area, as determined based on criteria developed under the Climate Law. *See* New York State Energy Research Development Authority searchable map: https://www.nyserda.ny.gov/ny/Disadvantaged-Communities.

[6] "GCEDC Takes First Step, Declaring Itself Lead Agency for Environmental Review of Larger Data Center Proposal, Harold B. Owens, *The Batavian*, December 19, 2025. Accessed at https://www.thebatavian.com/howard-owens/gcedc-takes-first-step-declaring-itself-lead-agency-for-environmental-review-of-larger.

- Conduct a comprehensive SEQR review that assesses the environmental impacts of the construction and operations stages of the proposed project.
- Ensure the integrity of the SEQR process by requiring independent studies on anticipated impacts, including noise, air emissions, energy usage analysis, traffic, and water impacts be completed and made available to the public.
- To ensure informed, meaningful public participation, prior to the conclusion of the SEQR process, public hearings must be conducted.

In offering these comments, NYPIRG is keenly aware of the critical point the state is at in advancing its climate and energy policies and the impacts that site-specific decisions will have on the quality of life in New York – on their own and cumulatively. Our future depends on our being thoughtful, deliberate and weighing longer-term impacts with due consideration. We hope and trust that GEDC shares this perspective.

Thank you for your careful consideration of these comments.

Sincerely,

Eric Wood
Senior Environmental Program Coordinator

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

I have to express my opposition to the stream data center being proposed for Stamp. Well, there are many financial reasons and economic impacts to our taxes, utilities and water. I'm advocating today for those who don't have voice voices primarily our plant and animal relatives. This data center is being proposed 3.5 miles away from the protected, bald eagle nest eagles, need quiet skies in order to fly live as healthy beings I'm hopeful that the noise study is going to show the impact this will have on the

wildlife I feel like the noise study is primarily focusing on humans and not on our plan and animal relatives bats birds insects are going to be affected by the noise and vibrations from the data center in addition taking that even a step further plants and trees are reactive to noise and vibrations this rains, true to my heart because we harvest a lot of medicinal medicines and foods in big woods and on the wildlife refuge. These plants and medicines have been harvested for hundreds of years by my families our families eat these items we use them to heal our bodies in our minds. They are our relatives I don't think that the studies are actively portraying the impact that it's going to have on this ecosystem. This is our way of life. This is our connection to the Earth. This is our connection to the ancestors. Many people have brought up issues regarding the water situation, which I am also concerned about. I live off territory, but I also utilize it. Well we have gone through a massive drought in the past year. I lost six established pine trees. Three of them were over 7 feet tall. This was due to the drought because we have well water. I was not able to water our plants in our trees. I lost many plants trees in and medicinal herbs even with using a close loop system you are still putting our environment at risk the close loop system will utilize more electricity putting more strain on our grid heating up our area even more. We are drought susceptible. I fear that this data center could cause wildfires. I don't understand why the GCEDC doesn't propose something that would benefit the whole community in our agricultural landscape I understand that it's a science and technology based site, but why not put in agricultural sciences a college where local students could go to improve upon? Are already agricultural landscape classes community classes greenhouses a produce center a living Forest Garden where people could come over from all over the area and take classes there are some very specific and protected plants and medicinal herbs right in the Iroquois wildlife refuge they could be studied. You could put the Stamp site to go use in something that the whole community could get Behind. I'm urging you to leave a legacy of positivity and growth for the coming generations.

Sincerely,

streampublichearing@gcedc.com

To: streampublichearing@gcedc.com
Subject: Do not allow for the data center to be built

Do not allow for the data center to be built in Alabama, NY. Or anywhere else in western NY for that matter.

Facts:
* This proposal includes $1.46 billion in tax breaks for an already massive company. In return, Western New York gains 125 permanent jobs. This is about $11.7 million per job.

* Large data centers put massive strain on electrical grids. Currently, the data center is estimated to require 500 MW. This is one fifth of the maximum output of the Robert Moses Hydroelectric power plant in Niagara Falls.

* To completely power the site with green energy would require 5 square kilometers of solar panels, or 200 full size onshore wind turbines. There are currently no plans for Stream to fund either of these projects.

* New Yorkers are currently dealing with record high electricity prices. With New York State ranking 6th highest in the US for electricity prices. Adding another massive drain will only make utility costs go up.

* The proposed site is less than two miles from the Iroquois National Wildlife Refuge. With the additional noise and light pollution, as well as smog from generators, any wildlife in the refuge will be deterred from staying.

* The proposed site is just barely over a mile from the Tonawanda Indian Reservation. Again, with additional noise, light, and smog disrupting our neighbors.

* For both of the above points, light and noise pollution are listed as the lowest priorities on Stream's own publicly available sustainability report.

* Data centers use a massive amount of water. The proposed facility would use 20,000 gallons of water per day. This is equivalent to the water use of over 250 people.

Opinions:

* AI is currently in a bubble to rival the 2008 housing crisis. Any investment by any governmental agency is less foolish, and more dangerous.

* Spending $11.7 million per job is one of, if not the worst return on investments I have ever heard of.

* Even factoring in the temporary construction jobs, with Stream estimating 1,200 construction workers needed for the five year build phase. Even estimating the construction wages to come to $100k/yr, and

all 1,200 people employed for the entire five year project, and all workers being from Western New York (none of the above statements are going to happen, but we'll give you the benefit of the doubt). That's only $600M in wages. Meaning that there is still $860M to be spread out across the 120 permanent jobs. Now totalling $7.17M per permanent job. Still an abysmal return on investment.

* You can absolutely find a better return on investment for industrial workers. Or even hire government workers directly for a far better return on investment.

This data center is one of the most idiotic, hare brained, wastes of money that I have ever heard of. It will help no one but billionaires. It will create barely any jobs. It will make the utility bills of New Yorkers go even higher. It will be an investment in a bubble. It will destroy the surrounding protected wildlife refuge, and ruin the quality of life for all nearby residents.

Send them packing. They can find somewhere else. We don't want them here. Especially not for this overinflated price.

Or are you too busy lining your pockets with your own $176 million kickback that we taxpayers are going to have to pay? Disgusting.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Please do not put in this data center! We do not need to collect data on everyone's lives. If anything, we need more privacy, not less. Our electric bills have already reached an unprecedented high because of the solar panels going in. We don't need more bills! Please keep data centers away! Constant noise and lights are a health hazard to people and animals. And we need clean water for us all. Please do not put this through!!

Sincerely,

Peter Dart

Subject: The AI Data Center

Hello, I'm a member of the upstate New York community.
Although I may be young still, I'm not too young to not understand the dangers that come with AI and the data centers that are related to them. I'm not quite old enough yet to fully feel or understand just how impactful this new center will be to the environment or daily life, but I, and all the other youths of the Rochester area will be inheriting everything the last generation left behind, including the damage this center will do.
I'm beseeching anybody that reads this to please cancel the construction of these AI data centers. It will do irreparable damage to not just the local environment, but people's daily lives, and our future as a planet.

-Margaret Milner, Upstate New York youth.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

I have so many concerns about this data center. I live in North Tonawanda, where neighbors are suing the crypto mine that uses much of the same technology that would be used on a much larger scale at STAMP, suing due to the physical and psychological effects of the constant noise and vibration attacking inside private homes. This proposed data center is so unfathomly large, how much more noise and vibration will be affecting a much larger population of both people and wildlife? This site is close to the

Iroquois National Wildlife Refuge, home to bald eagles and other significant and endangered wildlife that must be protected. It threatens the water. It threatens the rights and culture of the Seneca Nation and their beloved Big Woods. We need to be learning from First Nations peoples how to care for the land that cares for us. The data center has no plan in place for industrial wastewater management. The proposed closed loop cooling system will generate PFAs and other forever chemicals. Water and air quality will go down and the cost of electricity will go up for the entire state. You are offering huge incentives at our expense to a for-profit company with a terrible track record that cares only about their profits. The conflict of interest inherent in the “environmental reviews” is telling. If there was nothing to hide, nothing would be hidden. The amount of incentive from taxpayers’ money per each job that would be created is sickening. I value nature and wildlife, peace and quiet, clean air and water for ourselves and our children’s children. I value the wisdom and culture of our Native communities. I thrill to the sight of an eagle in flight. These are things worth protecting. I cannot support this data center project. Thank you.

Sincerely,

RE: National Audubon Society Comments on State Environmental Quality Review of Project Double Reed – STREAM U.S. Data Centers, LLC Proposed Data Center at WNY STAMP

To Whom It May Concern,

On behalf of the National Audubon Society's office in New York State, with a membership of over 90,000 New Yorkers, I thank you for the opportunity to submit written comments on the State Environmental Quality Review Act ("SEQRA") Development Application submitted by STREAM U.S. Data Centers, LLC for their proposed Project Double Reed at the Western New York Science & Technology Advanced Manufacturing Park ("WNY STAMP") in the Town of Alabama, Genesee County.

As we described in our March 31, 2023, comments on the sitewide Part 182 Incidental Take Permit Application (Application ID: 8-1820-00032/00003) for the WNY STAMP site, this landscape is ecologically significant due to its high value to threatened and endangered bird species. The WNY STAMP site is located within Audubon's Iroquois NWR/Oak Orchard and Tonawanda Wildlife Management Areas Important Bird Area, which is designated as continentally significant; within the NYSDEC's Oak Orchard-Iroquois Grassland Bird Conservation Center and Western New York Grassland Focus Area 1 (Morgan and Burger 2008); within a Wintering Raptor Concentration Area; and within one of Audubon's grassland climate strongholds. All of these designations reflect the value of this exceptional landscape to vulnerable bird species.

We have been made aware of reports that the project site may contain occupied habitat for State-Threatened Bald Eagles and that an active nest may be present on the site. Community testimony at the Genesee County Economic Development Center's (GCEDC) March 19, 2026, public hearing also included statements by local residents that Bald Eagles are observed flying over the WNY STAMP site "almost daily". Additionally, the Full Environmental Assessment Form submitted by STREAM U.S. Data Centers as part of its revised SEQRA Development Application dated April 6, 2026 acknowledges at Section E.2.o that Bald Eagles have documented habitat on or near the project site. The project site is also located adjacent to the Iroquois National Wildlife Refuge and the Tonawanda and John White Wildlife Management Areas — landscapes that are well-documented as Bald

Eagle habitat — and lies within a designated Wintering Raptor Concentration Area. The reported presence of Bald Eagles on or in the vicinity of the project site is therefore not surprising and entirely consistent with the site's ecological designations.

If Bald Eagles are present on the project site and engaging in essential behaviors such as nesting, the SEQRA Development Application must be revised to include an analysis of potential impacts to Bald Eagles, or a Supplemental Environmental Impact Statement must be prepared focusing on endangered and threatened species using the site. As Audubon noted in our 2023 comments on the sitewide Part 182 Incidental Take Permit, the 2012 WNY STAMP Generic Environmental Impact Statement and its 2016 amendments did not analyze impacts to threatened and endangered species that use the WNY STAMP site, and subsequent revisions have failed to do so as well. The current revised SEQRA Development Application submitted on April 6, 2026, also does not remedy this deficiency.

Under 6 NYCRR § 617.7(c)(1)(ii), substantial adverse impacts on a threatened or endangered species or their occupied habitat are among the criteria indicating that a significant adverse environmental impact may occur. If Bald Eagles or other listed species are present, the proposed construction activities, 24-hour artificial lighting, continuous operational noise from cooling equipment and diesel-powered backup generators, and increased human activity would certainly affect any individuals that use the site or the surrounding area for occupied habitat.

Additionally, a Part 182 Incidental Take Permit would be required before construction may proceed, as the existing sitewide permit is limited in scope to the take of Short-eared Owls and Northern Harriers. We note that the question of whether a new Part 182 Incidental Take Permit is required is ultimately one for the NYSDEC to resolve, and we urge the GCEDC to require STREAM U.S. Data Centers to consult with the NYSDEC Division of Fish and Wildlife on this question and request a jurisdictional determination. Without this determination, neither the applicant, the GCEDC, nor the public can know whether a permit is required. There may also be additional requirements from the United States Fish and Wildlife Service pursuant to the federal Migratory Bird Treaty Act and the Bald and Golden Eagle Protection Act, and STREAM U.S. Data Centers should be directed to consult with the Service as well.

Thank you for considering these comments. If you have questions, please contact our Policy Director, Erin McGrath, at erin.mcgrath@audubon.org.

Sincerely,

Erin McGrath

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Tom Nussbaum

A non-self-reliant data center anywhere within the Great Lakes region is irresponsible. Not only is it directly impacting the communities immediately surrounding it, but it will negatively impact the entire region, if not the country, due to discharge, disturbed ecosystems, and the economic toll. WNY does not need what lands we have to be dedicated to industrial sites that will go bankrupt and unused within a couple decades; history should not repeat itself.

Sincerely,

Alexandra Kane

This is a TERRIBLE idea. Siting a mega-scale data center at STAMP will certainly degrade the Oak Orchard River watershed and and degrade a world-class fresh-water fishery. Don't do it.

Sincerely,

Dan Hucko

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

I am a scholar of large-scale infrastructure in the twentieth century. Again and again, history teaches us that extractive and polluting projects such as this one are constructed at the expense of Indigenous communities. Politicians often lament the harm of industrialization in the past. Now is your opportunity to stop harm from happening in the present and the future.

Sincerely,

Jane Robbins Mize

Hello GCEDC,

Last night I was able to attend the meeting at the Alabama Fire Hall. It was my first time speaking during this meeting and I was able to read a piece of the Seneca Nations 27 page SEEKER letter. While reading I could not help to notice Mark and the other two people sitting at the table. I realize something as I looked

at all of you and that is how tired you looked. Im sure you worked all day just as many of the other people didnwho were there, including myself, and it made me think you are all just human too. I know that seems obvious, but in this fight we can forget about our humanity. I'm sure you all have loved one's, families and friends as we all do. We all want what's best for our families and children's futures. Myself and the rest of the folks who are fighting to not have this Data Center built can truly see the hurt, pain and degradation this will do to the area, the animals and the surrounding people. I truly implore you to reflect on not what the GCEDC wants, but what the people who live here want. And how they are pleading for this to not move forward.
Please vote no on this issue.
A concerned Genesee County member,
Marcia Bohn

Sincerely,

streampublichearing@gcedc.com

Subject: Stream Data Center project comment

Hello,

I am writing today to provide comments on the proposed STREAM Data Center project. I am vehemently and totally opposed to this project as it seeks to extract the community's and region's land, energy, and water for a profit that cannot be proportionally captured or reimbursed by local stakeholders in an economically sustainable way. After the project's completion the center will only provide 125 jobs, none of which, from my understanding, are required to be hired from or be permanent residents of the local community. Likewise, it does not seem that any of the construction contracts are guaranteed to local companies. These realities mean that the community will capture little of the wealth generated by the Data Center while Stream diminishes the value of amenities like prestean natural environments, access to fresh water, and affordable clean energy. Therefore, the data center project, if completed, will end in a reality in which Stream permanently diminishes the amenities of the local community and region while capturing the vast majority of the wealth created by the project with little to no benefit to the community. Likewise, despite Stream's confidence in the project's longevity there is plenty of credible doubt about the long term viability of the technologies that the Data Center seeks to support. If the Data Center fails to turn a profit for the company then the community will be left with diminished amenities and no compensation. It is for these reasons and many others that I strongly suggest that Genesee County reject Stream's application for a new Data Center.

Sincerely,
A concerned Buffalo resident

Subject: Re: STAMP Project

Thank you Mr. Suozzi.

A final thought, it has been in the news recently that a data center would like to be considered where the former Tonawanda Coke Plant sits. While the Tonawanda Coke Plant was closed for good reason, and the data center will pose some of the same issues, at least they are considering it being put where there is an existing structure and will not be destroying perfectly good, beautiful, prestine land. I am sure there is somewhere in Genesee County that might serve the same purpose for this data center.

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

No one wants this data center.
I am a high school student who wants to grow up in a region with clean air and fresh water. I also want the rights of indigenous peoples to be respected.

I am writing as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed — the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I am against the financial incentives (tax breaks) requested by STREAM US Data Centers. This is corporate welfare: tax dollars instead are needed for education, health care, preserving our environment, and supporting a fair economy for all of us.

I demand that GCEDC reject the incentives application, and follow all of NYS Department of Environmental Conservation's recommendations. I especially demand cultural and environmental justice that ensures that the Tonawanda Seneca Nation have input into these matters.

Please protect the quality of life, well-being, and cost of living of all residents of New York state, including the residents of nearby communities in Genesee County and the Great Lakes bioregion, and especially the citizens of the Tonawanda Seneca Nation.

Sincerely,

Lily R

Please consider a more suitable location for the data center. For example, in Finland we place them underground and use the heat they generate to warm local homes with district heating.

Sincerely,

Irene Ketonen-Keating

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Heather Bennett

Subject: Data center project

Dear Board Members,

We sincerely hope that you will find the integrity to act on behalf of the people of Genesee County. The citizens of the county, and indeed all of WNY, have made it clear that this project is not a proper fit for this location. First and foremost, the environmental degradation should be reason enough to call a halt. It is really unthinkable to have a data center sited near a nature refuge and a native reservation. Secondly, the financial benefits for the residents of Genesee County are not sufficient to justify the amount of abatements and breaks being offered to the developers. Our final point is that the consumption of our water and our electricity by a monster data center in no way benefits the people of the county. The cost of living is already too high and rising, why would you want to burden us with higher electricity and water bills?

Please search your hearts and your heads and make the right choice. Our grandchildren are the sixth generation of our family to live in Genesee County.

Sincerely,

David and Janice Laben

I'm a young man, part of a growing generation. I and everyone I know will be here when the original politicians, contractors, planners, and businessmen behind this datacenter will be long gone. We will live on a planet that will bear the overwhelming toll that these centers will bring. We will be the ones who need to fix it in that day when we, not you, are still alive, yet responsible for passing on a planet that SHOULD be left better than we left it. This work is already monumental, please, do not give us any more.

Curb this project, give Upstate NY this one charity- and the land surrounding all of us may have one less disease to tackle. Let’s preserve it as it is, and prevent this area from getting any more difficult than it already has. Thank you.

Sincerely,

Jacob Weigert

I lived in Pembroke for the first 18 years of my life three miles away from the reservation. I always understood the importance of respecting sovereignty and being a good neighbor. This project is an abomination that will put undue harm on our communities for no economic gain. I am ashamed that this project has gone so far and our economic development board has betrayed the interests of my community.

Sincerely,

Jenna Lawson

These data centers are a blight on not just local communities but on the environment. Every place a data center has gone in it has impacted not just the energy needs of the area but polluted local water tables making water undrinkable by local residents. We live in a time when we are seeing the effects of climate change unfold before us. These data centers do nothing but exacerbate the already dire situation our

planet is in. I implore you to think not only about the residents of the area but about the planet we wish to leave for our children. Stop the destruction caused by these data centers.

Sincerely,

Jennel aubel

No Data Center at STAMP! The economic and environmental consequences are too severe for the people living near the complex, who you are supposed to represent.

Going forward threatens the way of life of those living in the area and especially the neighboring Tonawanda Seneca Nation. Your pursuit of this ill-conceived scheme to put an industrial park in the middle of a rural area home to several wildlife preserves and adjacent to the Tonawanda Seneca Nation, sacrifices the well-being of those you represent and continues the colonial pattern of Indigenous cultural genocide that the US nation should be working to repair, not to impose greater harm.

STAMP is proving to be a bad and costly idea. RETHINK STAMP: NO DATA CENTERS AT STAMP!

Sincerely,

streampublichearing@gcedc.com

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Robert Gonzalez

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

I do not consent to a data center being built near my home or in my general area! I fear for the safety and health for all surroundings citizens!! Present and future! I DO NOT CONSENT TO ANY DATA CENTERS BEING BUILT IN THIS AREA.

Sincerely,

Isabella Voss

Not only would I never back something that is backed by a Trump supporter, it is paramount that we protect the Tonawanda Seneca Nation (as well all of us who live, breathe, drink water, & want a livable future in NYS). This is an unnecessary disruption and should not continue under any circumstances.

Sincerely,

Emily Regan

Data centers are KILLING THE PLANET! They are taking precious energy that New York doesn't have to spare and doesn't have the infrastructure to accommodate. It takes water from communities, pollutes it to the point it cannot be cleaned, treated, or recycled at all. WATER IS LIFE! It takes up land we need and for what? So AI can destroy our society, steal our jobs, and kill the planet? The public deserves a robust

electrical grid and affordable electricity, no destructive big tech. NO DATA CENTERS. NO DATA CENTERS.

Sincerely,

Rowan Aubel

This project is doomed from the start. Partnering with the infamous Apollo Global, who has strong ties to Epstein and a very bad history, is the first issues. Dirty money making this county just as dirty by default. Then all of the environmental issues, the noise, lights sound, vibration and closeness to native land and two animal refuges is incomprehensible. The effect on our utility bills and water usage will be a huge impact to residents who cannot afford it. Stream should provide their own sources of water and

electricity. Lastly, the Extremely high tax subsidies is ludicrous, how can you possible justify that, all for 125 jobs that many will likely be remote, and the rest very low paying. It defies logic, except when you look at the $146 million payout you get if this goes through. Explains why you are pushing it so hard when the residents have said no! This will be your legacy, and we will not forget you turning your backs on us!

Sincerely,

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Tara Connelly

I submit these comments as a representative of Green Orleans, a small grassroots organization committed to the preservation of our environment, and to the concepts of environmental and social justice. We are based in the village of Albion, in Orleans County.

Much has been said and written about economic issues that bear on the proposed data center, but there are huge social and environmental risks at stake. None of those risks will fall on STREAM itself. The profits will flow elsewhere, but the risks stay here.

The Big Woods of the Tonawanda Seneca Nation and the surrounding areas will get the unceasing noise, the heat, the diesel exhaust, and the groundwater pollution from any spills of diesel or cooling fluid. It is unethical to subject the Nation and its local neighbors to such risks.The data center buildings themselves will lie very near the border of the TSN - huge, hot, noisy reminders to the Native Americans that, after 250 years the insults to their land and their lives continue.

Beyond the TSN reservation, the protected wildlife areas will also be subject to pollution risks, the magnitudes of which are very difficult to quantify. But they are not zero.

Our culture tends to channel us toward a narrow view of economic cost/benefit analyses, but the value of everything in our world cannot and should not be reduced to dollars and cents. Are the financial offerings the GCEDC is considering worth the sights, sounds, and peace that rural residents enjoy?

Future generations are likely to look back at a data center at STAMP as a poster child for social and environmental injustice.

If we the people of western New York don't stand up and stop this project, our children and grandchildren will look back and ask "why?" Why didn't we stand up for the environment? Why didn't we stand up for justice? Why was money the only thing that mattered? Other communities around the nation successfully stopped data centers - why didn't we?

Don't let this happen. Stop the data center project. Thank you for the opportunity to speak.

Sincerely,

David Giacherio

Subject: Buffalo Ornithological Society (BOS) statement against STREAM Data
Attachments: BOS Anti-STAMP Resolution.docx

Hello,
The BOS endorsed the attached statement at its April 8th, 2026 meeting in Buffalo, NY.

Thank you for your attention in this matter.

With kind regards,
Gary Ciurczak

Gary Ciurczak
151 Lancaster Ave.
Buffalo, NY 14222
(716) 435-4396
Gary.ciurczak@gmail.com

To the Genesee County Economic Development Center (GCEDC):

The Buffalo Ornithological Society submits these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for Project Double Reed — the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

The Buffalo Ornithological Society, Inc. (BOS) was established in 1929 to promote the study of the birds of the Niagara Frontier Region, which includes Western New York and nearby, southeastern Ontario, Canada. This region is rich in bird life with over 380 species and 25 recognizable subspecies of birds recorded. We annually participate in bird counts throughout our region, including the Iroquois National Wildlife Refuge and other wildlife management areas near the proposed site for the STREAM US Data Center. The Tonawanda Seneca Nation "Big Woods" is also a large wild area adjacent to land proposed to be used by the Data Center. Several species of threatened and endangered birds, amphibians and mammals are found in the Big Woods and surrounding refuges.

We oppose the financial incentives request of over $1.4 billion submitted by STREAM US Data Centers; We request that GCEDC follow all of NYS Department of Environmental Conservation (DEC) recommendations; and call on GCEDC to:

- Reject the incentives application;
- Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;
- Conduct a Supplemental EIS for the entire STAMP site, taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;
- Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC, and the State Historic Preservation Office on those impacts.
- Conduct SEQR review that includes a detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that construction is forecast to take at least five years;
- Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;
- Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Please do not add more issues for native people. This is a ridiculous use of land and energy and is frankly insulting to New Yorkers and the US as a whole

Sincerely,

Alexander Tesna

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

The final environmental review needs to be executed by NY DEC. The Seneca County Economic Development Corporation has a direct conflict of interest in executing the Enviromental Impact Review and lacks know-how. This responsibility MUST be given to the proper authority. Any less is a blatant side stepping of nessisary review for a project of this scale in this sensitive of location.

Sincerely,

Matthew A Simpson

We do not need AI to ensure our basic survival. We DO need clean water, clean air, and a stable / healthy climate and environment. Please prioritize what actually fucking matters at a basic human / planetary level. Please have the courage to go against the grain of abstract economic development goals that inch us closer to societal collapse. The more of us that make these hard, but necessary decisions today, the easier it will be for others to join the movement and redirect our high-level direction tomorrow. Thank you!

Sincerely,

Vincent Sanchez-Gomez

It is unconscionable that the GCEDC has ignored the environmental permitting process, has spent so much tax payer money for nothing, is ignored the wishes of the residents of the county, and has ignored multiple treaties that acknowledge the sovereignty of the Tonawanda Seneca Nation. The US government must not, again, break their sworn pledge to respect the decisions of the indigenous people of the country and the state.

I reserve the right to submit further comments on the April 6 revised SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Subject: AI data center in Genesee, NY

Hi.

The fact that this is a serious discussion when almost 90% of the voting public is opposed is absurd. Do NOT build the data center! We do not want it here! It's horrible for water and light pollution, crowds Seneca Indigenous land (which legally isn't property of the US government! You have no right to be there!) and will create less than 200 jobs. My current workplace is hiring almost that many people right now, and you don't see us asking for $1.5 BILLION DOLLARS of taxpayer money!

Do NOT build this data center. We're watching and will vote accordingly.

Thanks for your time,
Linda

Subject: Do NOT build a data center in Genesee

Hello,

I (and everyone I know) am against a large-scale data center for primarily AI usage being built anywhere in upstate NY. It is horrible for the environment, causes huge hikes in electric usage and private citizen energy bills, and creates very few jobs. ESPECIALLY with all of the NYSEG and RGE price gouging concerns already being expressed. Do NOT build this data center!! We as a community are paying attention to your choices and will vote accordingly come midterms/next election season.

Thank you for your time.

Sent: Friday, April 17, 2026 11:42 AM
To: streampublichearing@gcedc.com
Subject: Public Comment on STREAM US Data Centers' STAMP Data Center Complex

To the Genesee County Economic Development Center (GCEDC):

My name is Ryan Madden, Indigenous Solidarity Director at NY Renews. We are a coalition of 400 climate, labor, youth, and community groups, and the force behind the Climate Leadership and Community Protection Act. We fight for clean energy, good jobs, and a healthier, more affordable New York. Following the leadership of Indigenous Nations in NYS, we work to ensure our efforts are aligned with Indigenous environmental justice, land justice, and sovereignty.

We submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

NY Renews incorporates by reference the written preliminary comments submitted by the Tonawanda Seneca Nation on April 16th, 2026 in response to the STREAM U.S. Data Centers SEQR & Financial Incentives Applications. We fully support the substance of these comments, which thoroughly document the Nation's extensive concerns and opposition to this proposed project. The threats to the Nation's subsistence hunting and medicinal gathering alone should be disqualifying for this project to move forward.

Our coalition is committed to the just implementation of the Climate Leadership and Community Protection Act. The proposed data center lies within a Disadvantaged Community, as designated by the Climate Justice Working Group, which subjects this project to review under the CLCPA. Per Section 7(3) of the law, in considering and issuing permits, licenses, and other administrative approvals and decisions, all state agencies, offices, authorities, and divisions shall not disproportionately burden Disadvantaged Communities. Given the threats posed by this project to the Tonawanda Seneca Nation which lies within this Disadvantaged Community, and our overarching respect for Indigenous sovereignty, we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of NYS Department of Environmental Conservations' recommendations with respect to the SEQR environmental review process, and call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts;

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that construction is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public; and

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation. It also threatens our Climate Law and violates the sovereignty and way of life of the Tonawanda Seneca Nation.

In closing: we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of DEC's recommendations with respect to the SEQR environmental review process, and call on GCEDC to reject the incentives application from STREAM US Data Centers.

Sincerely,

--

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Stephen Dutille

Re: Comments on Stream U.S. Data Center, LLC's Proposal for Economic Incentives for Data Center Campus at STAMP Site and Associated Environmental Review

Dear Mr. Masse and Members of the GCEDC Board:

I am submitting the following comments on behalf of the Atlantic Chapter of the Sierra Club and its 37,000 members concerning Stream U.S. Data Center, LLC's latest proposal for subsidies for a data center at the Science Technology and Advanced Manufacturing Park ("STAMP") site in Genesee County.

These comments address three interrelated issues involving Stream's current proposal for subsidies and the corresponding environmental review under the State Environmental Quality Review Act ("SEQRA"):

(1) the need for supplemental environmental review under SEQRA in light of materially changed circumstances at the STAMP Site and distinct impacts associated with the application that have not yet been assessed at the Site;
(2) the submission of an incomplete and internally inconsistent application that prevents informed review; and
(3) the proposed approval of unprecedented economic incentives based on assumptions and evaluation criteria that depart from GCEDC's prior practices and policies.

GCEDC is ultimately being asked to approve a project of extraordinary scale and consequence that was not contemplated in previous environmental reviews involving the STAMP Site, and without either a stable, complete, and consistent project description or the competitive and comparative analysis that GCEDC itself previously deemed necessary for materially smaller data center proposals at the STAMP Site.

The Sierra Club submits these comments to ensure that the administrative record fully reflects the scope of unresolved environmental, procedural, and fiscal issues associated with Stream's proposal (the "Project"). We also join in, incorporate by reference, and support the comments on the application submitted to GCEDC by the Tonawanda Seneca Nation dated April 16, 2026.

Finally, the Sierra Club reserves the right to supplement these comments.[1] Since GCEDC first began setting deadlines for public comment on the Project, Stream has continued to submit voluminous and revised information about its Project that has made evaluation and analysis of what is being proposed a constant moving target for the concerned public. A very large new SEQRA submission was made to GCEDC on or about April 6, 2026, shortly before the comment deadline. The Sierra Club requested an extension of the public hearing date and written comment deadline, but that request was denied by GCEDC's counsel in an email dated April 10, 2026. Consequently, the Sierra Club and its experts have had to accelerate their review of the voluminous new materials, and they reserve the right to submit supplemental or amended comments after GCEDC's self-imposed deadline.

Background

This is Stream's second proposal for a data center at the STAMP Site. The first was the source of widespread public outcry and controversy. It proposed a 250 MW facility with six backup generators in an area very close to the Tonawanda Seneca Nation's territory. Stream's proposal was selected by GCEDC over two competing data center proposals in March 2025, in part because GCEDC claimed that Stream's proposal was more favorable from an environmental perspective than the others. GCEDC issued a resolution approving financial incentives for Stream's first proposal. In doing so, GCEDC issued a resolution under SEQRA, finding that the proposal was consistent with the thresholds and conditions in the Generic Environmental Impact Statement ("GEIS") for the STAMP Site. GCEDC's

[1] The comments submitted in writing herein are in addition to and do not replace or supplant those comments made by the Sierra Club or its members at either of the public hearings or otherwise submitted in writing to GCEDC. In addition, while GCEDC has agreed to schedule a second hearing due to technical difficulties experienced at the first, any public comments made at the first hearing must be treated as part of GCEDC's administrative record for this application.

resolutions for the original proposal were rescinded following the filing of a lawsuit by the Sierra Club and Tonawanda Seneca Nation.

Stream has now come forward with a second proposal for a data center at the STAMP Site, double in size and environmental impact from the first. Unlike before, Stream's proposal is the only data center proposal under consideration by GCEDC.

Stream's new proposal is for a two-campus, data center complex at the STAMP Site that will occupy millions of square feet, consume 500 MW of electricity (most of the Site's capacity), and permanently constrain future development at the STAMP Site.

Stream nevertheless requests from GCEDC an extraordinary package of public subsidies, including hundreds of millions in sales tax exemptions that are proposed to benefit the data center's unnamed and undisclosed end-user. In exchange, Stream and its unnamed end user will subject the community to years of disruption, inflated electric bills, and environmental damage for the prospect of no more than 125 full-time jobs, a level of employment that is commonplace for an ordinary mid-sized local business in Western New York.

I. A Supplemental EIS is required to address numerous aspects of the application that have either not been adequately addressed in the GEIS, or which do not conform to the thresholds/conditions in the GEIS, but which may result in one or more significant environmental impacts.

A. Overview and Standard of Review

The threshold issue presented by the current application is whether GCEDC may lawfully rely on the existing GEIS[2] and findings to support approval of a project that differs so materially in scale, intensity, and impact from what was previously evaluated. As detailed below, the answer is no. The Project exceeds multiple assumptions, thresholds, and analytical boundaries that formed the basis of the GEIS and its subsequent findings, and it introduces new operational and construction impacts that were not contemplated when the GEIS was prepared. Under these circumstances, SEQRA requires additional and extensive review before GCEDC may proceed.[3] We agree with the New York State Department of Environmental Conservation ("DEC") that there are multiple aspects of the

[2] Unless otherwise stated, "GEIS" is used to refer to the complete STAMP Site GEIS, including both the DGEIS and FGEIS and subsequent updates.

[3] In 2012, GCEDC completed a "Generic" Environmental Impact Statement, the GEIS, for the STAMP Site after having determined that it may result in one or more significant environmental impacts. Accordingly, when a subsequent proposed action at the Site will exceed one or more of the conditions and thresholds in the GEIS or its findings, or if it presents new challenges that are not addressed adequately in either the GEIS or the findings, then additional SEQRA review is necessary, including the potential preparation of a supplemental EIS. See 6 NYCRR § 617.10(c).

proposal that warrant a supplemental Environmental Impact Statement ("EIS")[4] and offer the following comments in support of this position.[5]

B. The Environmental Health and Safety Requirements for the Data Center Industry, particularly those that touch on distinct elements of the application, have not been adequately addressed in the GEIS.

The GEIS acknowledged that the STAMP Site was intended to target "green-technology and advanced manufacturing companies involved in developing and manufacturing clean technology, renewable energy and/or energy efficiency products. These companies include photovoltaic solar sell manufacturing (PV), flat panel display manufacturing including medical imaging display, bio-pharmaceutical/nanotechnology-enabled industries, and green technology research and development for energy efficient building products."[6] The GEIS evaluated in detail the environmental, health and safety aspects of these target industries. Data centers were not included among them.

Appendix H of the DGEIS, entitled "Industry Requirements and Environmental, Health & Safety Report," stated that the STAMP Site "is being planned to support a variety of industrial manufacturing operations" and "an environmental review requires information and data pertaining to the industrial facilities' requirements for utilities, chemical use and potential environmental emissions and how such industries implement environmental, health and safety management systems."[7] The mix of advanced technology manufacturing facilities identified for the STAMP Site in Appendix H of the DGEIS included photovoltaic manufacturing, flat panel display manufacturing, and biopharmaceutical/nanotechnology-enable industries. Each of these three types of manufacturing are described in detail, along with their respective typical chemical use and storage needs, hazardous materials management, water usage, electrical demand, wastewater constituents, and air emissions.

The GEIS does not include a similar analysis of the data center industry. Moreover, hyperscale data centers of the type now proposed by Stream were not contemplated in the GEIS when it was prepared 15 years ago and are much larger than earlier versions of data centers that might have existed at the time. Subsequent updates and amendments to the GEIS or findings have not addressed the data center industry either.

---

[4] Letter from DEC to GCEDC, January 28, 2026, attached as **Exhibit 1**.

[5] Stream's application purports to identify various "mitigation" measures to address impacts associated with the Project's wide-ranging environmental impacts. Under SEQRA, GCEDC cannot issue a conditioned negative declaration for a Type I action such as the STAMP Site. Therefore, any proposed mitigation measures adopted for the purpose of reducing any potentially significant environmental effect associated with the Project must be assessed as part of a supplemental EIS.

[6] DGEIS at 5-3.

[7] App'x H to DGEIS at Exec. Summary.

GCEDC must therefore prepare a detailed data center operations impact analysis as part of a supplemental EIS. DEC agrees, stating that the agency "recommends a supplemental [EIS] be prepared for data centers as their impacts do not appear to have been adequately addressed in GCEDC's 2012 GEIS or its subsequent updates."[8]

GCEDC should retain an independent data center expert, familiar with the data center industry in general, to assist in preparing the detailed data center operations impact analysis.

As relevant to this application, particular areas of focus for the detailed impact analysis should include, at minimum, the following:

- Analysis of redundancy in power supply and use of generators

In general, large-scale data centers are designed with significant backup power using diesel generators so they can run continuously with minimal downtime from power outages. Data center developers have strong incentives to meet tenant availability targets because failing to do so can hurt profits and violate agreements with customers.

Stream's application is unusual compared to many data centers because it proposes less generator capacity (~30MW) than the Project's maximum power demand (500 MW). Given such a significant departure from standard industry practice, it is not clear how or whether such a proposal is feasible or what drawbacks are associated with such significant reductions in backup power supply. The application is silent on details as to how the facility will operate in a manner so different from most large-scale data centers, which is an obscurity that is amplified by the fact that the Project's proposed end-user is unnamed and unknown. The Project's proposed use of generators and plans for backup power must be assessed and addressed as part of any supplemental EIS.

- Energy usage

Hyperscale data centers "use vast amounts of energy" to maintain and operate their facilities.[9] Data centers like the Project consume as much electricity as entire towns and cities. They bring uncertainty to grid reliability and planning and can necessitate grid infrastructure upgrades that cause utility rates to rise.[10] The data center industry's effect on the grid and the likely increase in the cost of electricity for the region should be one of the community impacts that a supplemental EIS evaluates.

[10] "Data Centers: Straining the Grid and Your Wallet," (Oct. 16, 2025), available at https://stateimpactcenter.org/insights/data-centers-straining-the-grid-and-your-wallet

- Cooling systems and any associated industrial waste discharges

Data centers typically have two separate cooling loops: first, an IT/process loop, and second, a heat rejection system. While the IT/process loop is often "closed" (i.e. sealed from the atmosphere), the configurations of the heat rejection system can vary significantly and may be open to the atmosphere. It is therefore critical to confirm what is meant by any proposed "closed loop cooling" system at a data center and whether it applies to both types of cooling loops employed by the facility. Depending on the heat rejection system deployed, the system may require no water, millions of gallons of water, or some water during peak heat periods. In addition, the cooling systems require the use of chemicals/hazardous substances (e.g., glycol) that require periodic replacement and disposal.

Stream's application is largely silent on these issues, but GCEDC must assess them in order to make an informed decision regarding the Project's anticipated environmental impacts. The industry's use and management of cooling systems should be addressed as part of a supplemental EIS.

- Uninterruptable Power Supply (UPS) Backup Battery Systems

Data centers often rely on UPS backup battery systems to provide immediate power during an outage or when the primary power supply is unstable, allowing for a bridge in power while generators or alternative power supplies come online. There are various types of UPS that might be deployed in a data center, including standby systems or ones that provide continuous power.

Stream's application references the use of UPS battery systems at the facility but provides little information about this equipment or how and where such systems will be deployed. This topic must be included as part of the analysis in any supplemental EIS.

- E-waste management and disposal

Data centers generate significant volumes of electronic waste (e-waste), including servers and GPUs that are typically replaced and discarded every 2 to 5 years. E-waste is often hazardous and includes chemicals and heavy metals (such as lead, mercury, cadmium, and arsenic) that can be released into the environment during improper disposal or recycling.

A hyperscale data center of the type proposed in the application is therefore likely to generate vast volumes of e-waste that will need to be managed and disposed on a regular basis during the lifetime of the facility. This waste management issue must be addressed as part of a supplemental EIS.

- Transparency in end-user of data centers

Data center developers will often submit proposals for hyperscale data centers without disclosing to the community and impacted public the end-user for whom the data center is intended to be constructed and designed. This application is no different. But information about the end-user can inform the design of the facility and its anticipated uses and inform the impacts on the surrounding community. Microsoft has apparently pledged to stop using NDAs so that the end user for its proposal can be disclosed.[11] Transparency in the data center industry should be assessed as part of any supplemental EIS.

C. GCEDC should prepare a supplemental EIS that addresses unanticipated changes in how the STAMP site is being developed in the 15 years since the GEIS was prepared and how or whether the application aligns with the STAMP vision.

In the GEIS,[12] GCEDC contemplated a 15-year timeline to full buildout of the STAMP Site (~2026), resulting in 9,330 direct full-time equivalent jobs. As DEC recommends, a supplemental EIS should be prepared "to evaluate updates to the STAMP Site, its goals, its tenants, and any other originally unanticipated changes in how the STAMP site is being developed" relative to what was originally contemplated.[13]

Relatedly, GCEDC should evaluate how the Project in the application aligns with the STAMP vision and how it may limit or impact additional development of the STAMP Site. We agree with DEC when it states that "GCEDC should evaluate how [this] facility" with its 125 proposed permanent jobs "helps achieve the economic benefit of providing 9,000 jobs at full build-out" as contemplated in the GEIS. This Project will, after all, likely cap development in one or more respects at the STAMP Site, since it will use 500 MW of the STAMP Site's energy allocation and 2,200,200 sq. ft. of the 6,130,000 sq. ft. full-build out capacity. As DEC put it, "[a] single tenant using 500 MW of the STAMP site's energy allocation is likely to limit the development of the STAMP site." Indeed, Stream seeks a covenant from GCEDC in its application that will reserve 500 MW of power for its facilities, essentially locking in GCEDC to this commitment. Future development at the STAMP Site will therefore likely be capped or GCEDC will need to seek further expansion of the Site's

[11] "Local data center critics praise Microsoft's pledge to stop using NDA's but remain skeptical," Wisconsin Watch (March 23, 2026), available at https://wisconsinwatch.org/2026/03/local-data-center-critics-praise-microsofts-pledge-to-stop-using-ndas-but-remain-skeptical/.
[12] DGEIS Economic Impact Analysis for STAMP (Apr. 2011).
[13] Ex. 1 (Letter from DEC).

capacity thresholds; either outcome is inconsistent with the vision of the STAMP Site upon which the GEIS was based.

If the STAMP Site is to include data centers, contrary to its original vision, then the SEQRA record must reflect consideration of reasonable alternatives at the STAMP Site that would reduce environmental or infrastructure impacts, including a no action alternative.

D. The application, which will cap future development at STAMP without providing significant permanent jobs, does not appear to align with the Comprehensive Plan for the Town of Alabama, which was based on the original STAMP vision.

For similar reasons, the proposed Project is inconsistent with the Town of Alabama's Comprehensive Plan as well as assumptions in the GEIS regarding economic benefits to the Town of Alabama in the form of job creation.

The GEIS contemplated an amendment to the Town of Alabama's Comprehensive Plan to reflect that the vision of STAMP in 2011 was consistent with the Town's Comprehensive Plan.[14]

The proposal for the amendment in the GEIS stated that the STAMP Site "will augment the region's existing economy through the development of jobs and businesses competitive in a global technology marketplace," and identified a direct impact of the project as "lead[ing] to the employment of approximately 9,330 employees at full-build-out."

An amendment was then incorporated into the Town's Comprehensive Plan which stated that "[t]he STAMP Project as described herein, and in more detail in the GEIS, is hereby incorporated into the Comprehensive Plan and the implementation of STAMP in a manner consistent with the Final Generic Environmental Impact Statement and any findings issued thereunder is a goal of the Town of Alabama."

A supplemental EIS must evaluate whether, assuming the Project is approved, the STAMP Site is still consistent with the Town's Comprehensive Plan as contemplated by the GEIS. As noted above, the Project is estimated to create only 125 permanent jobs (1.3% of 9,330), while using more than 83% of the STAMP's energy capacity and 35% of the STAMP Site's total building capacity.

[14] See App'x to GEIS, Proposed Amendment to Alabama Comp. Plan (Apr. 2011). Sierra Club has serious concerns about whether and to what extent the original STAMP vision was consistent with the Town's Comprehensive Plan and reserves all rights and claims related thereto.

In addition, under the N.Y. Town Law § 261-b, the Incentive Zoning Agreement between GCEDC and the Town of Alabama is necessarily predicated on the STAMP Site being consistent with the Comprehensive Plan and the vision for the STAMP Site as developed in the GEIS. If the Project, as approved, does not align with the STAMP vision as described in the GEIS and therefore, by extension, the amended Comprehensive Plan, then the Incentive Zoning Agreement may be unenforceable or require amendment. *See* Town Law § 261-b(2) ("The purpose of the system of incentive, or bonus, zoning shall be to advance the town's specific physical, cultural and social policies in accordance with the town's comprehensive plan....The system of zoning incentives or bonuses shall be in accordance with a comprehensive plan..."). GCEDC's approval of the Project will likely cap and consume significant infrastructure and land capacity at the STAMP Site in a manner inconsistent with the STAMP vision embedded in the Comprehensive Plan.

Finally, as noted above, hyperscale data centers of the type now proposed by Stream are markedly different than the type of data centers that might have existed at the time the Town's zoning was amended to accommodate the STAMP Site in accordance with either the Incentive Zoning Agreement or Comprehensive Plan. All of these issues relating to consistency with community plans under SEQRA must be assessed as part of a supplemental EIS.

E. A supplemental EIS is needed to assess the environmental impacts of the anticipated expanded electrical capacity at STAMP and the energy use associated with the application.

The GEIS originally contemplated that the STAMP Site at full capacity would consume 185 MW of electrical power and determined that this was not a significant environmental impact.[15] While subsequent environmental reviews at the STAMP Site have referenced the fact that GCEDC has since expanded the capacity to 600 MW through, among other things, the construction of the STAMP substation, an analysis of the environmental impacts of the expanded electrical capacity at the STAMP Site does not appear to have been performed yet. Furthermore, the Project and expanded electrical capacity at the STAMP Site are functionally interdependent and must be reviewed together in tandem. Thus, as the current application proposes to require up to 500 MW of electrical power, an amount that far exceeds what was analyzed in the GEIS, a detailed environmental analysis of the anticipated expanded electrical capacity at the STAMP Site must be analyzed as part of a supplemental EIS.

Moreover, the GEIS's finding of no significant environmental impact with respect to the anticipated electrical capacity at the STAMP Site (then estimated at 185 MW) was based primarily on two factors, neither of which apply to the current application: (1) the use

[15] *See* DGEIS, Table 10-1.

of Niagara Hydro Power Zone renewable energy, and (2) that the types of companies targeted for STAMP are "in the business of producing products that enable the generation of renewable energy and are increasingly utilizing renewable energy products at their own facilities…" Unlike Stream's original application for a data center at STAMP in 2025, the Project's current application does not reference or discuss the use of Niagara Hydro Power Zone power, nor is Stream in the business of producing products that enable the generation of renewable energy. Stream has represented in its application for incentives that it "**will not** apply for a Hydropower allocation." [16] (emphasis in original).

The current Project is therefore not consistent with the GEIS and a supplemental EIS must address this item as well.

F. A supplemental EIS is needed to address newly enacted laws and changes to existing laws since the GEIS was prepared 15 years ago.

DEC recommends that GCEDC prepare "a supplemental EIS" for the STAMP Site "to address new laws and regulations," citing for example, the Climate Leadership Community Protection Act (CLCPA), the Environmental Justice Siting Law, and the Amended Freshwater Wetlands Act. We agree and offer the following additional commentary in support of DEC's recommendation.

First, as it relates to the CLCPA, the GEIS stated that "[t]here is no evidence that the build out of the [STAMP Site] will have a potential significant impact to climactic conditions."[17] This statement appears to be at odds with the State Legislature's findings and declaration in Section 1 of CLCPA, stating that "[t]he severity of current climate change and the threat of additional and more severe change will be affected by the actions undertaken by New York and other jurisdictions to reduce greenhouse gas emissions," and that "[a]ction undertaken by New York to reduce greenhouse emissions will have an impact on global greenhouse gas emissions and the rate of climate change." In light of the Project's anticipated energy demand, GCEDC should re-evaluate its assumptions in the GEIS regarding the STAMP Site's impact on climate change and the attainment of the State's goals under CLCPA.

In addition, while GCEDC has long maintained that it is not a "state agency" subject to the CLCPA's substantive requirements, that does not foreclose the need to evaluate a project's impact on the attainment of statewide greenhouse gas emission reductions under SEQRA. DEC's review of any air permits for the STAMP Site will need to evaluate whether and to what extent any given approval is consistent with the attainment of statewide

[16] Stream US Data Centers Project-Cost Benefit Calculator Executive Summary (March 12, 2026).
[17] DGEIS 6-28.

greenhouse gas emissions reductions in ECL Article 75. It is therefore consistent with the spirit and purposes of SEQRA for GCEDC, as lead agency, to consider such impacts as early as possible in evaluating an application at the STAMP Site. *See* 6 NY-CRR § 617.1 ("The basic purpose of SEQR is to incorporate the consideration of environmental factors into the existing planning, review and decision-making processes of State, regional and local government agencies at the *earliest possible time*") (emphasis added).

Further, the greenhouse gas emissions associated with the Project are not limited to the stationary sources of emissions for which the Project must obtain DEC air permits. The Project's construction and operation will result in other greenhouse gas emissions that must be inventoried and assessed under CLCPA, including emissions associated with each of the following activities: construction and operation diesel trucking, e-waste disposal, the hauling and transportation of sanitary waste to Oakfield, other waste disposal, construction equipment, concrete use, etc.

Second, the STAMP Site and Project must be considered in relation to the Environmental Justice Siting Law. The GEIS for the STAMP Site was prepared well before the enactment of the Environmental Justice Siting Law and its implementing framework. Therefore, the GEIS did not assess whether future projects at the Site could result in disproportionate environmental or public health burdens on disadvantaged or environmental justice communities. A supplemental EIS must therefore evaluate whether, and to what extent, the Project implicates the Environmental Justice Siting Law, including whether additional analysis, mitigation, or avoidance measures are required to prevent or minimize disproportionate impacts on the neighboring Tonawanda Seneca Nation and other affected communities. Failure to address this issue would leave a significant gap in the SEQRA record, given that environmental justice considerations now form an integral part of New York's environmental review framework.

Third, it is critical that the GEIS be updated to reflect the recent amendments to the Freshwater Wetlands Act. The GEIS assumed back in 2012 that "[t]he wetlands potentially impacted are low-to-medium quality wetlands, many of which are isolated and therefore not currently regulated" and that "[n]o wetlands or adjacent areas [are] likely to be regulated by NYSDEC under Article 24 of the Freshwater Wetland Act…".[18] Such assumptions are outdated and do not reflect the significantly expanded jurisdiction of DEC under the amended Freshwater Wetlands Act. In addition, as DEC points out, given that construction activities associated with the facility are very likely to extend through 2028 and beyond, these activities will need to be evaluated for potential freshwater wetland impacts.

[18] DGEIS 6-12 to 6-14.

Finally, GCEDC should also evaluate the STAMP Site and GEIS in relation to the 2022 adoption of New York's environmental rights amendment, Article I Section 19, to the New York State Constitution, which guarantees to each New Yorker the "right to clean air and water, and a healthful environment." The GEIS was prepared well before this constitutional guarantee was added to the State Constitution and must be assessed to determine whether and to what extent it is consistent the Amendment's guarantees.

G. A supplemental EIS should include a detailed construction impact analysis as recommended by DEC.

DEC recommends that GCEDC prepare a "detailed construction impact analysis."[19] We agree that such an analysis should be prepared in connection with a supplemental EIS and offer the following additional commentary in support of its preparation.

According to Consumer Reports, "[h]yperscale data center facilities take years to build, and the construction phase can take a toll on community members' daily lives."[20] In this case, the Project is estimated to be constructed in three phases taking at least four years. The current application presents many of the typical challenges associated with a multi-phased, multi-year construction project, while also offering unique challenges that do not appear to have been adequately addressed in the GEIS or its subsequent updates. Accordingly, a supplemental EIS is needed that should address, at a minimum, each of the following:

1. Horizontal Directional Drilling (HDD) at the STAMP Site. The Project proposes the installation of substantial telecommunication infrastructure between the north and south campuses, and which will need to cross several wetlands. Stream proposes the use of HDD to mitigate impacts to wetlands, but HDD is not identified as an accepted mitigation measure in the GEIS for avoiding impacts to wetlands at the STAMP Site.

   HDD is a trenchless construction technique used for installing underground piping or cables along a shallow arc using a surface-launched drilling rig. As GCEDC is likely aware, the technique is not without its attendant risks. It involves the use of a water and bentonite slurry to lubricate and cool the drill head beneath the subsurface. If this slurry is released into surface waterbodies, a common occurrence and pollution event referred to as an "inadvertent return" in industry parlance, it has the potential to adversely affect aquatic species and may necessitate costly environmental cleanups. Such spills prompted the U.S.

[19] Ex. 1 (Letter from DEC).
[20] Ex. 2 (Consumer Reports).

Fish and Wildlife Service to halt the construction of a waste pipeline from the STAMP Site in the Iroquois National Wildlife Refuge.[21] In addition, a very recent HDD "mishap" occurred in Monroe County where an underground aquifer was punctured by the subsurface drill, causing groundwater to rise to the surface and impacting private drinking water supplies in a large area.[22]

Any proposed use of HDD at the STAMP Site as part of the Project proposal must be analyzed as part of a supplemental EIS.

2. Dewatering and Soils Stability for Construction. The GEIS states that "soils within the targeted development areas of the Project Site do not present any unusual or unanticipated conditions for construction activities."[23] It also states that "[e]xcavations for buildings will not extend into the groundwater table."[24]

   However, the parcel upon which the Project's north campus is proposed to be located is known for its poorly drained soil conditions.[25] The STAMP substation was relocated directly north of the STAMP site, beyond the STAMP boundaries, due to the presence of wetlands and wet soil conditions in the area of the proposed Project.[26]

   Depending on the results of the geotechnical investigation on the north campus[27], the buildings may need large/deep pylons in order to keep the foundation from shifting or sinking in the poorly drained soils. In addition, the application states that construction of the Project will necessitate dewatering, which can have negative impacts on the nearby wetlands or the groundwater table. Such measures must be analyzed as part of a supplemental EIS.

[27] As discussed below, it does not appear that the results of the complete geotechnical investigation for the north campus have yet been made publicly available.

3. Construction Traffic. The Project involves significant volumes of construction traffic and will necessitate changes to traffic patterns and possible closures on Crosby Road, as there is proposed to be a staging area on the opposite side of Crosby Road from the Project parcels. Much of the construction traffic is anticipated to be large construction vehicles. This is distinct from the type of traffic that was contemplated in the GEIS. The GEIS states that one of the key factors influencing the emission of particulates is the presence or use of diesel vehicles, such as from large construction vehicles.[28] The impacts of large volumes of construction traffic on the surrounding community, including with respect to air emissions, noise, dust, and other impacts must be assessed as part of a supplemental EIS.

II. The application is incomplete and lacks information that prevents GCEDC and any involved agencies from making an informed and rational decision about the Project's anticipated environmental or economic impacts.

A. Overview and Standard of Review

Even apart from the need for a supplemental EIS, GCEDC cannot complete any lawful SEQRA review on the present record because the application lacks the basic information necessary to define the Project being reviewed. SEQRA requires agencies to assess impacts based on a coherent and consistent project description; where key elements of a proposal remain undefined, internally inconsistent, or subject to material change, environmental review is necessarily premature. Moreover, in a number of areas of environmental concern, Stream downplays the significance of environmental impacts based on voluntary, ill-defined, and tentative mitigation measures that cannot be relied upon for purposes of SEQRA review.

The deficiencies identified below are therefore not merely technical or informational. They go directly to GCEDC's ability to lawfully make the findings required under SEQRA and take the requisite hard look.

GCEDC's findings for the STAMP Site provide, in relevant part, that the SEQRA review for any "Future Project Use" at the STAMP Site like the application must be based "[u]pon development of specific site plans."[29] Indeed, GCEDC's staff correctly acknowledged in their March 11, 2026 Updated Technical Team Memo (the "Tech Team Memo") that, "[i]n

[28] DGEIS 6-22.
[29] STAMP Lead Agency Findings Statement, March 1, 2012, at 49.

order to complete the environmental review for the Project, there must be one consistent Project description" as "impacts change as Project details change." The Tech Team then identified numerous gaps and inconsistencies in the SEQRA application and draft site plan. The Tech Team Memo's list of inconsistencies and deficiencies is incorporated herein by reference.

In addition, the Sierra Club identifies the following items that also must be addressed by Stream and GCEDC before any SEQRA review can be completed. While Stream has continued to submit new revisions to its application materials, including in its voluminous April 6, 2026 SEQRA submission, significant omissions and inconsistencies persist across all submissions. Each new submission creates new questions, while leaving many other questions still unanswered.

The Sierra Club reserves the right to comment further upon the application if and when such additional information is made available to the public.

- **Omissions and Inconsistencies in Draft Site Plans.** Important details regarding the Project that impact site plan review and SEQRA review continue to be omitted from the Project's so-called "site plans." These omissions and inconsistencies affect an accurate assessment of the facility's environmental impacts, including impacts on noise, air emissions, emergency response, etc. Merely by way of example:
    - <u>The "Gen Yards" in the draft plans.</u> Gen Yard is short for "Generator Yard" and is the term for where backup generators are typically located. However, it is not clear what type of equipment is depicted by the small boxes in the proposed enclosed "Gen Yards" identified in the application's plans. There are approximately 200 of these units across the two north campus buildings and each is ~16x16 ft, which is smaller than a typical 2 MW generator. The number of such units in a proposed exterior enclosure is unusual for typical data center site designs.
    - <u>Roof plans, including coolers and other roof equipment.</u> In some places of the application, Stream represents that the number of chillers on the roof will be reduced from what was originally proposed, but the draft site plans do not show any of the proposed roof infrastructure and equipment, making it unclear the exact number of rooftop chillers proposed. Moreover, without site plans of the roof equipment and infrastructure for each proposed building, it is unclear whether the roof equipment includes the chillers along with or in addition to some other equipment and infrastructure.

- Number of Generators. Along similar lines, the draft plans show locations of six generators, but Stream is seeking an air permit for a total of 12 generators and its SEQRA application states that the "12 Emergency diesel-powered generators will provide backup power" for the Project.[30] GCEDC and the Town of Alabama should assume that Stream is planning on 12 generators unless all of its application materials are consistent on this point.

- **Inadequate Noise Analysis and Evaluation.** We understand that GCEDC has retained an independent consultant to review the application's noise analysis. To assist in that review, and in light of deficiencies and holes in the current application, we have enclosed as **Attachment 1** a report by noise expert Les Blomberg. We urge GCEDC to share Mr. Blomberg's report with the retained consultant as soon as possible.

  In addition to all the items flagged by Mr. Blomberg in his report, an overarching issue is their reliance on Stream's voluntary operational practices as proposed mitigation for noise impacts. New York courts have long held that reliance on an applicant's tentative plans for mitigation measures is insufficient for purposes of an agency taking a "hard look" under SEQRA. A noise analysis that assumes reduced nighttime fan speed or limited generator operation without enforceable conditions to that effect[31] fails the "hard look" test because it does not analyze the impacts of the project as approved.

  Similarly, DEC's Guidance "Assessing and Mitigating Noise Impacts" (2001), which is relied upon in the GEIS for assessing STAMP Site noise impacts, directs that any initial noise evaluation "determine the maximum amount of sound created at a single point in time by multiple activities" and that modeling "evaluate the worst case noise impact potential" at the closest receptors. Operational limits such as reduced nighttime operation or throttled equipment are treated as mitigation measures, not baseline assumptions, and may be relied upon only if incorporated into enforceable operational plans or permit conditions.

- **Promised Mitigation Based on Unsubmitted Plans or Studies.** A related issue persists across the application. In several areas of environmental concern, including but not limited to the use of HDD (Inadvertent Return Contingency Plan), emergency response (Emergency Action Plans), construction traffic (Construction Traffic Management Plan), and construction waste (Construction Waste

[30] BUFA-GCEDC Application (Revised Apr. 6, 2026) at 2.

[31] It is anticipated that the Applicant will seek to obtain an air permit that caps the operation of the generators to 500 hours per year. The noise analysis, however, does not analyze noise emissions up to the proposed cap.

Management Plan), Stream relies on mitigation measures to be developed and studied as part of future, unsubmitted plans. An agency's SEQRA determination cannot be based upon an applicant's mere promise to perform and later submit studies or plans.

- **Incomplete Geotechnical Information.** It does not appear that the results from the 2026 geotechnical investigation for the locations of the buildings on the north campus have yet been made publicly available. This prevents an accurate assessment of the Project's anticipated construction impacts and overall design feasibility. Sierra Club reserves the right to supplement these comments once the results of the geotechnical report are made publicly available.

- **Water Demand Relative to Sanitary Sewer Discharge.** The application estimates that the Project will demand approximately 20,000 gallons per day for water, but estimates only about 10,000 gallons per day will be discharged as sanitary wastewater,[32] and it states further that "[t]here will be no consumptive water use in the cooling system."[33] Stream must provide more information about this apparent discrepancy and an explanation as to why twice as much water will be used than discharged.

- **Backup Power Needs.** Stream has not sufficiently explained where their backup power will come from given that 12 generators are not close to sufficient to supply 500 MW of power. At nearly any data center, having enough backup power is critical to data center tenants and end users. It is not clear, given the information in the application, how Stream would demonstrate sufficient robustness in power availability to secure customers.[34]

  The failure of Stream to adequately describe its plan to meet the industry standard for power redundancy in the event of a power failure is a significant omission that calls into doubt the feasibility of the Project as proposed and how it might need to be modified down the line, which may result in significant environmental impacts. Stream's plan for power redundancy must be fully and specifically laid out as part of any SEQRA review.

---

[32] Engineers Report (Revised Apr. 3, 2026).
[33] BUFA-GCEDC Application (Revised Apr. 6, 2026) at 3.
[34] Having enough backup power is really important to data center occupants and end users, so much so that the Uptime Institute, which sets widely used standards for data centers, says the least reliable data centers can be down for about 28 hours a year, while the most reliable ones are built to be down for only about 26 minutes a year. Data center developers have strong incentives to meet these availability targets because failing to do so can hurt profits and violate agreements with customers.

- **Electrical Grid Access, Timing, and Availability.** Access to grid power and getting through any load queue is repeatedly cited as one of the limiting factors of data centers coming online in a timely fashion. Most states have a large backlog of data centers trying to connect to the power grid. The application does not include a realistic schedule that weds construction of the data center to operation in a way that aligns with grid access and availability. If part or all of the facility is constructed, but grid access is not provided, the application should address what (if any) contingencies are proposed to address bridge power, if at all.

  Further, as noted above, unlike its first rescinded proposal, Stream does not intend to use Niagara Hydro Power Zone renewable energy to power its Project. The lack of specificity in the Project plans regarding the source of the energy for the Project and firm commitments from energy providers is a significant gap in the application that affects the entire feasibility of the Project and its proposed timeline.

- **Sanitary Wastewater Disposal**. The application's Engineers Report states that a holding tank is available for sanitary sewer discharge but that there are "plans for this holding tank to be replaced with a pump station and force main that will convey sewage from STAMP to the Oakfield WWTP."[35] When is this anticipated connection proposed to occur, and will the new discharge trigger a separate permitting requirement for the Oakfield WWTP? In the interim, how frequently does the waste from the holding tank need to be transported? These contingent plans for waste disposal must be addressed as part of any environmental and site plan review.

III. Stream's extraordinary and disproportionate request for government subsidies should be denied.

A. Overview and Standard of Review

GCEDC's authority to provide financial assistance is constrained by Article 18-A of the General Municipal Law, GCEDC's Uniform Tax Exemption Policy ("UTEP"), and the procedural prerequisites in GML § 859-a. In line with these authorities, GCEDC's discretion to grant incentives must be exercised consistently, rationally, and in conformity with its own policies and prior practices**.**

The Sierra Club submits the following comments to identify material inconsistencies, departures from past evaluation criteria, and gaps in the record that

[35] Engineers Report (Revised Apr. 3, 2026) at 2.

prevent a fully informed decision and undermine the integrity of the incentive review process.

In addition to the following, the Sierra Club incorporates by reference the enclosed comments prepared by the Applied Economics Clinic, dated April 9, 2026, included as **Attachment 2**.

B. Inconsistencies Between the Current Incentive Review and the Prior (Rescinded) Project Double Reed Review

This is Stream's second proposal for a data center at the STAMP Site. GCEDC's review of the first proposal — which was ultimately rescinded — was conducted pursuant to a competitive, multi-applicant evaluation process that included criteria that was applied to each competing proposal. By contrast, the current application is being reviewed outside of a competitive framework, despite being substantially larger in scale, resource demand, and fiscal impact than the earlier proposal.

1. Evaluation Criteria Applied to the Earlier Proposal

In the competitive process for the first proposal, GCEDC advised applicants that it would evaluate proposals based on, among other things:

1. Creation of good-paying jobs in the local community
2. Amount of land consumed and impact on overall STAMP build-out
3. Demand for resources (water, sewer, electricity) and impacts on STAMP capacity
4. Environmental impacts, including impacts to wetlands, streams, and the Territory of the Tonawanda Seneca Nation

These criteria formed the core basis for GCEDC's staff recommendation and Board decision in selecting Stream's first proposal over competing bids.

2. The Current Proposal Performs Worse Under the Same Criteria

When measured against those same criteria, the current Project proposal presents materially worse outcomes:

- **Jobs**:
  The current proposal is approximately twice the size of the prior proposal in square footage and electrical demand, yet still proposes only 125 permanent jobs, the same order of magnitude as before.
- **Land and Build-Out Impact**:
  The proposal would consume approximately 2.2 million square feet of STAMP's

anticipated 6.13 million square-foot full build-out, significantly constraining future development opportunities.

- **Electrical Capacity**:
  The application states that GCEDC will covenant to reserve 500 MW of the 600 MW STAMP substation capacity for this single project — a factor that GCEDC staff previously identified as limiting STAMP's long-term economic development potential.
- **Environmental Impacts**:
  The environmental footprint of the current proposal is far greater than that of the earlier, rescinded proposal — yet it is being reviewed without the comparative environmental scrutiny that was central to the prior selection process.

The record does not explain why a project that performs worse under GCEDC's own prior evaluation criteria is now being reviewed in isolation and without competitive benchmarking**.** Moreover, GCEDC has not articulated any rationale for abandoning the competitive review framework previously deemed necessary for evaluating materially smaller data center proposals.

C. Sales Tax Exemptions for an Unidentified Tenant

1. The Application Explicitly Seeks Sales Tax Exemptions for an Unnamed End User

The application expressly seeks a sales-tax exemption that is "sized to cover the combined investment of Applicant and the tenant in the Project," with the majority of exempt purchases attributable to equipment that will be purchased and owned by the facility operator/end user, not the applicant (Stream).

Despite this, the tenant:

- Is not identified;
- Is not an applicant;
- Is not a signatory to the application; and
- Is not bound by the representations, reporting obligations, or recapture provisions applicable to applicants under GCEDC's UTEP.

2. Inconsistency with GCEDC's UTEP and Past Practice

GCEDC's UTEP limits sales-tax exemptions to purchases made "as an agent for the Agency" and frames all compliance, reporting, and recapture obligations around identified applicants or project operators**.** The UTEP does not contemplate:

- Pre-approval of sales-tax exemptions for unidentified future entities;

- Open-ended exemptions tied to operational equipment subject to frequent replacement like data center equipment;
- Evaluation of fiscal impacts without knowing the identity of the primary beneficiary.

GCEDC staff previously flagged these same concerns in evaluating competing data center proposals last year, noting that server costs and sales-tax exposure change materially once a tenant is identified and that such uncertainty undermines reliable incentive analysis.[36]

GCEDC's departure from its own UTEP and prior evaluation framework may render the incentive determination arbitrary and capricious.

3. Statutory Notice and Record Deficiencies

GML § 859-a requires that the public hearing notice and inducement resolution identify the owner, operator, or manager of the project. Where sales-tax exemptions are tied primarily to operations rather than construction, failure to identify the operator deprives:

- The public of meaningful notice;
- GCEDC of the ability to assess job creation, compliance history, and enforceability; and
- Affected taxing jurisdictions of a clear understanding of fiscal impacts.

The lack of disclosure regarding the project operator and incentive beneficiaries raises serious questions as to whether the statutory purpose of the public hearing requirement has been satisfied.

D. Inflated Job and Economic Assumptions

The fiscal and economic analyses prepared by MRB (March 12, 2026) include employment assumptions that depart from prior practice, including:

- Inclusion of off-site or third-party service jobs not reflected in the application;
- Reliance on estimates that assume full build-out and full occupancy without identifying the end user;
- Treatment of speculative operational benefits as concrete economic impacts.

[36] GCEDC Staff Comparison Memo (2025), attached as **Exhibit 3**.

GCEDC staff did not rely on similar assumptions in the earlier Project Double Reed evaluation or in the competitive bidding process. The departure is unexplained and undermines the comparability of economic impact analyses.

IV. Conclusion

In sum, Stream's current proposal presents GCEDC with a project that is larger, more resource-intensive, and more consequential for the long-term development of the STAMP Site than its prior proposal. Yet it is being reviewed on a record that is incomplete, internally inconsistent, and untethered from the assumptions and evaluation criteria that previously governed GCEDC's consideration of materially smaller data center proposals at the STAMP Site.

The combined effect of these deficiencies is that GCEDC lacks a legally sufficient basis to conclude that the Project's environmental impacts have been adequately addressed under SEQRA relative to the GEIS as updated, or to approve extraordinary economic incentives in a manner consistent with GCEDC's UTEP and past practice.

The Sierra Club urges GCEDC to require a Supplemental EIS as described herein and recommended by DEC, and to deny the requested economic incentives package for the Project.

Kate Bartholomew, Chair
Sierra Club Atlantic Chapter

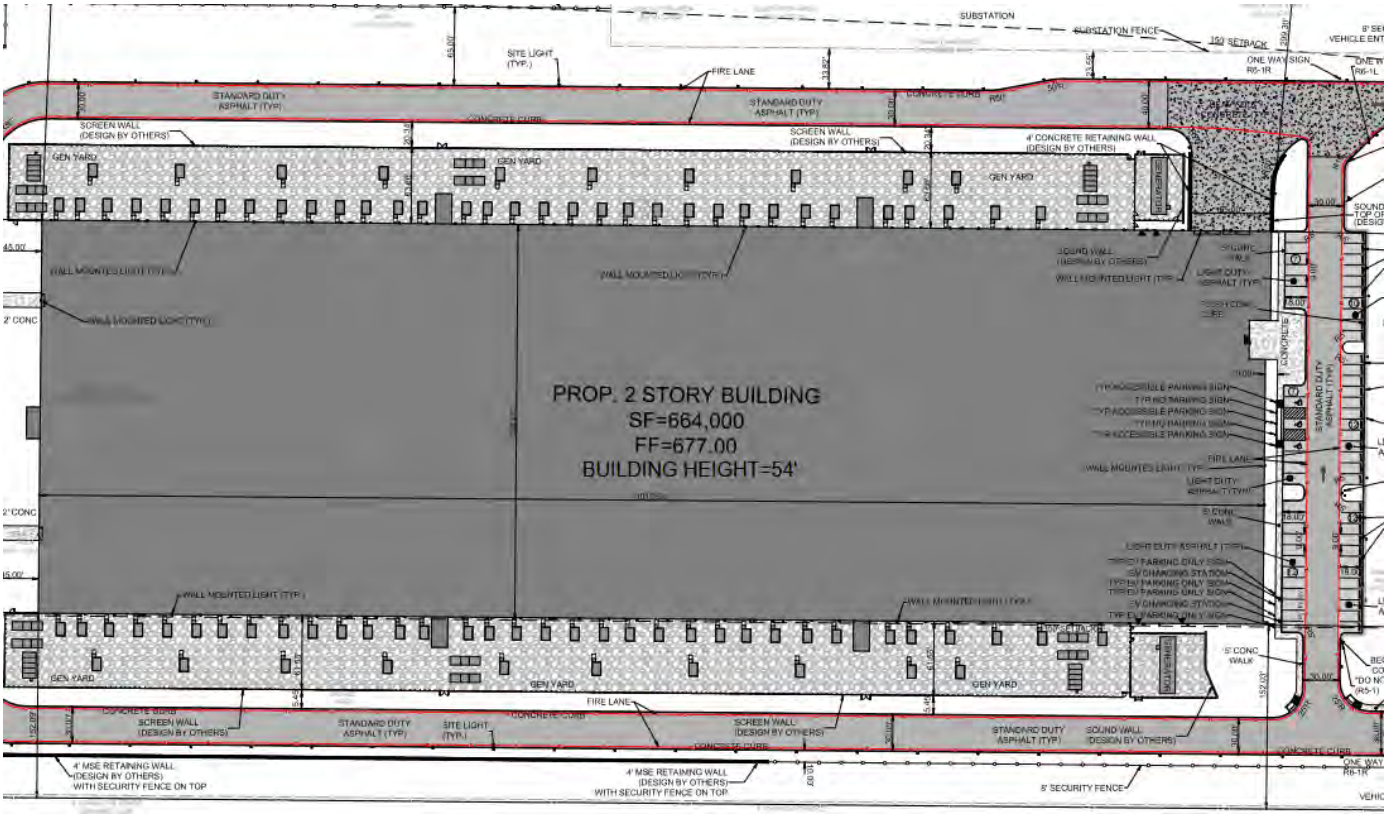
Acoustical Review of Application



Les Blomberg, Noise Pollution Clearinghouse

April 16, 2026

Introduction

I am the Executive Director of the Noise Pollution Clearinghouse. I founded this national non-profit in 1996. The Noise Pollution Clearinghouse assists the general public with noise problems, helps communities interpret, revise, and enforce their noise ordinances, trains police officers in noise enforcement, and assists other non-profits address noise issues. I specialize in federal, state, and local noise policy. I am a member of the National Park Service's and FAA's National Parks Overflight Advisory Group and a former member of American National Standards Institute (ANSI) S12 Noise Standards Committee.

I have reviewed the STREAM Revised SEQR Development Application (April 6, 2026) and accompanying Site Plans and exhibits, including the Acoustics Technical Summary and Ramboll Noise Modeling Results, as well as 2012 FGEIS, Alabama Zoning Code, and NY DEC noise guidance—Assessing and Mitigating Noise Impacts. The Acoustics Technical Summary was based upon CADNA noise modeling performed by Ramboll. While the summary of the results from the model is included in the Application, the Applicant's actual CADNA noise modeling was not provided and is not included as part of the Application. The CADNA noise model must be reviewed to evaluate the accuracy of the modeling and the summary of the results provided by Ramboll.

I understand that GCEDC is in the process of retaining GHD to evaluate the Application's noise analysis. It is critical that the CADNA noise model be made available to GHD so that GHD can evaluate the accuracy of the noise modeling. In addition, in the absence of having the modeling myself, I have identified the following issues that the GHD noise analysis being undertaken at the request of GCEDC should, at a minimum, address in reviewing the STREAM Application. The following 47 points are further explained within this paper.

1. Obtain the Applicant's CADNA noise modeling files, including past modeling files from past noise reports.
2. Identify any discrepancies between older and newer modeling files.
3. Verify the maximum number of chillers proposed for the Project and confirm that number has been modeled.
4. Verify whether the chillers for each building are identified in the Site Plans.
5. Verify whether the type of chiller is identified in the Site Plans.[1]
6. Verify whether the proposed number of the chillers for each building is identified in the Site Plans. [2]
7. Verify the locations of the chillers for each building as identified in the Site Plans.

[1] The Applicant has provided some information about the model of the chillers, but it does not appear that this information has been incorporated into the Site Plans.

[2] Recently, the Applicant has stated that the number of chillers will be reduced from 66 to 60 per building, but the number of chillers for each building is not represented on the Site Plans.

8. Verify the heights of the chillers for each building as identified in the Site Plans, including the height at which the chillers are mounted above the roof.
9. Verify whether the roof top barrier for each building is in the Site Plans.
10. Verify whether the height and materials of the roof top barrier are identified in the Site Plans.
11. Verify that the type of generator is identified in the Site Plans.
12. Verify the maximum proposed number of generators for the Project and confirm that number has been modeled.
13. Verify the number of generators proposed for each building.
14. Verify whether the height of the generators as well as the height of the 9,500-gallon fuel tank they will be mounted on is identified in the Site Plans.
15. Verify whether the materials for the generator barriers are identified in the Site Plans.
16. Verify whether the heights of the generator noise barriers are identified in the Site Plans.
17. Verify whether the Project will include any air handling and HVAC devices and whether they are identified in the Site Plans and should be modeled.
18. Verify whether the approximately 103 unidentified "boxes" in the Gen Yard found on one side of the building in the Axon image contradict the approximately 164 found in the Site Plans.[3]
19. Verify that the equipment represented as the "boxes" in the Gen Yard is identified in the Site Plans.
20. Verify the type of equipment represented as the approximately 60 chillers, 60 cylinders, 140 boxes and another 15 apparent air handling devices on the roof in the Axon, and whether they make noise and should be modeled.
21. Verify whether any of the "boxes" in the Gen Yard require active cooling (as they are surrounded by architectural louvers) or otherwise make noise and should have been modeled.
22. Verify whether there is any noise producing equipment in the substation and whether it should be modeled.
23. Confirm that the Application fails to state what the ambient sound levels are at and around the STREAM site.
24. Confirm that the Application fails to assess the increase in the ambient sound pressure level.
25. Confirm that the Application fails to assess the frequency and tone of the noise.
26. Confirm that the Application fails to assess the percentile sound levels.
27. Confirm that the Application fails to provide necessary information required by a SEQRA noise assessment, such choosing appropriate receptor locations, determining ambient sound levels and characteristics of the sound at receptor locations, and the sound pressure increase and characteristics at receptor locations.

[3] The Gen Yard is also called the Equipment Yard in some Application materials.

28. Confirm that the Application fails to consider the thresholds for significant impact found in the DEC noise guidance.
29. Confirm that the Application fails to evaluate STREAM noise with respect to the Alabama Zoning Code.
30. Ensure that the Application accurately describes the current soundscape, including its character.
31. Utilize a time audible noise metric to evaluate the impact of STREAM noise on the Big Woods Tribal lands.
32. Investigate and reconcile differences between STREAM's 2025 and 2026 noise modeling.
33. Confirm that the noise producing equipment and barrier types, heights and locations are not found in the Site Plans.
34. Identify modeled sound power levels that are not the maximum of the equipment.
35. Ensure that the sound power levels used are true maximum sound power of the equipment.
36. Ensure that nighttime sound power levels are true maximum sound power levels of the equipment, or supported by independently verifiable and enforceable operational restrictions.
37. Ensure that sound power modeling inputs are in unweighted octave band values and not just A-weighted or A-weighted octave band levels.
38. Ensure that the modeling utilizes all generators in the worst-case scenario as STREAM is asking for 500 hours of operation annually for its generators, or the equivalent of nearly 21 days of operation.
39. Create a list of noise sources that were not modeled.
40. Ensure that the modeling is based on all noise making equipment, including the substation, air handling systems, and whatever of the hundreds of unidentified boxes and cylinders on the roof and in the Gen Yard are that may produce noise.
41. Ensure that construction noise is modeled.
42. Obtain a copy of ISO 9613-2 and verify that the Application's representation of the accuracy of the modeling is correct, particularly at distances greater than 100 meters.
43. Add the accuracy of ISO-9613-2 to the CADNA projections to get a true maximum noise value.
44. Calculate the C-A weighted values at receptor locations to assess the potential for low frequency noise impacts.
45. Ensure a true cumulative impact assessment where the ambient levels are presented to the GCEDC and public in a table and then the projected levels are added to the projected project levels.
46. Quantify the limitations for future expansion and use of the STAMP site given STREAMs consumption of the above ambient capacity in a SEQR analysis.
47. Resolve all inconsistencies between the Application and Site Plans with respect to noise generating devices.

Each of these 47 issues is described more fully below. I further reserve the right to supplement and/or amend this report and the findings herein if and when the CADNA model is made available for review.

1. The Site Plans Fail to Provide Critical Information Needed for a Noise Assessment.

The first thing GCEDC and GHD should note is that the Application and Site Plans are incomplete and inconsistent, particularly with respect to noise sources, which should preclude the STREAM Project from being analyzed for acoustical review.

For example, it is unclear from the Application whether there are 6 or 12 generators proposed. The noise analysis and Site Plans appear to assume 6 generators, while other parts of the Application and the facility's air permit application state that the number is 12.

Other information about the Project's potential noise impacts is omitted from the Application. No other noise sources beyond chillers and generators are analyzed as part of the noise analysis, but it is unclear whether additional sources may exist. The anticipated noise level of construction is not addressed in the Application. It is unclear whether the proposed barriers will be effective in reducing noise because the location and height of the noise sources relative to the barriers are not given in the Application or Site Plans. It is impossible to know the maximum noise level of the chillers because it was not provided in the Application. Only the values for 70% and 55% fan speed were provided. The locations of the chillers are not identified in the Site Plans.

A noise impacts analysis cannot rely on hypothetical equipment and hypothetical designs operating at hypothetical reduced noise levels. In order to determine noise at receptor locations, one needs the exact noise sources, the exact location and height of those sources, the maximum noise output of those sources, and the exact height and location of any barriers to accurately assess noise impacts. Anything less is a purely hypothetical review. The Applicant has not yet provided the specific noise sources or proposed rooftop noise barriers on a site plan. The Applicant is asking the GCEDC to evaluate a concept of a plan, not an actual site plan. This is extremely problematic. Without an accurate and complete Site Plan, GHD will be unable to compare the Applicant's noise modeling to the Site Plan, to determine the accuracy of the noise modeling. Among the other problems noted are the following:

1. The chillers are not in the Site Plans.
2. The type of chiller to be used is not identified in the Site Plans.[4]

[4] The Applicant has provided some information about the model of the chillers, but this information has not been incorporated into the Site Plans.

3. The number of chillers is not identified in the Site Plans. [5]
4. The locations of the chillers are not identified in the Site Plans.
5. The heights of the chillers are not identified in the Site Plans.
6. The height that the chillers are mounted above the roof is not identified in the Site Plans.
7. The roof top barrier is not in the Site Plans.
8. The materials of the roof top barrier are not identified in the Site Plans.
9. The type of generators is not identified in the Site Plans.
10. The number of the generators identified in the Site Plans is inconsistent with other parts of the Application.
11. Consequently, the definitive number and locations of the generators are not identified in the Site Plans.
12. The height of the generators as well as the height of the 9,500 gallon fuel tank they will be mounted on is not identified in the Site Plans.
13. The materials of the generator barriers are not identified in the Site Plans.
14. The heights of the generator noise barriers are not identified in the Site Plans.
15. Air handling devices are not identified in the Site Plans.
16. The unidentified "boxes" in the Gen Yard found in the Axon image contradict the Site Plan "boxes."[6]
17. The type of equipment represented as the approximately 975 "boxes" in the Gen Yards are not identified in the Site Plans.
18. The type of equipment represented as the "boxes" and cylinders on the roof (in the Axon) are not in the Site Plans.
19. Some of the "boxes" in the Gen Yard likely require cooling as they are surrounded by architectural louvers, and their noise is not included in the modeling.
20. Noise producing equipment in the substation are not identified on the Site Plans or included in the modeling.

Critical information is absent from the Site Plans when it comes to noise producing devices. Consequently, the noise modeling conducted by the Applicant is merely speculative and not based on an actual site plan. Moreover, the results of any noise analysis are similarly speculative. Finally, enforceable operational limitations must be incorporated into the Application if they are to be relied upon for noise mitigation, such as the reliance on lower fan speeds. Otherwise, the modeling is merely hypothetical.

Given a hypothetical site plan, inaccurate modeling will result. For example, without accurate site plans, the total number of noise sources (chillers, generators, and other sources) are unknown. In fact, there may be hundreds of potential noise sources shown but not identified on the Site Plans (the "boxes" referenced above). Therefore, it is

[5] The Applicant has said the number of chillers has been reduce to 60 per building, but those chillers are not shown on the Site Plans.

[6] The Gen Yard is also called the Equipment Yard in some plans.

impossible to determine the accuracy of the modeling, as the final number, type, and locations of all noise sources are unknown.

Similarly, the Site Plans provided to GCEDC and the public do not identify the actual height of the chillers. They appear to be mounted above the roof (See the Axon), but the height at which they are mounted is not provided. Without the height of the chillers, the effectiveness of the noise barrier cannot be determined. This problem cannot be resolved without accurate and complete Site Plans.

Moreover, without accurate and complete Site Plans, it is not possible to evaluate the effectiveness of the generator barriers, as the generators sit on top of fuel storage tanks. So, the height of the noise source is unknown, and there is no way to know if the generator noise source was modeled at the correct height or if the effectiveness of the barrier in the modeling was accurate.

Finally, GHD should carefully compare the Applicant's type, number, location, and height of noise sources and barriers in the CADNA modeling files to those in the complete Site Plans (when they are made available) to ensure they exactly match. GHD cannot do this without accurate and complete Site Plans and the Applicant's CADNA modeling files.

2. The Application Fails to Correctly State and Evaluate the Appropriate Regulatory Noise Criteria

2.1 Incomplete SEQR Review

The STAMP Site was evaluated in the DGEIS using the DEC noise guidance. See DGEIS 6-86 to 6-87. According to the DEC noise guidance, there are seven "factors" to consider in determining the impact of noise on humans:[7]

1. Ambient noise levels
2. Future noise level
3. Increase in sound pressure level
4. Sharp and startling noise
5. Frequency and tone
6. Percentile of sound levels
7. Expression of overall sound

[7] See pages 11 and 13 of Assessing and Mitigating Noise Impacts (DEC noise guidance). Note that the DEC noise guidance uses the term "sound characteristics" on page 11 and "factors" on both pages 11 and 13.

2.1.1 The Application fails to state what the ambient sound levels are at and around the STREAM site.

The Application fails to consider Factor #1. This applies to the nearby homes but is particularly relevant with respect to the natural soundscape of the Big Woods. The Application mentions ambient levels, but it provides neither data concerning the levels nor evidence that the ambient levels are correct. In fact, one of the few definitive statements in the Application about the ambient levels is that the validity or accuracy of the measurements cannot be verified.

The importance of correctly characterizing the soundscape is discussed further in Part 3 below.

2.1.2 The Application fails to assess the increase in sound pressure level.

The Application fails to consider Factor #3. It is impossible for the Application to assess the increase above ambient levels since it didn't provide the ambient levels. Moreover, the Application fails to provide the cumulative impact of the noise when combined with other current or reasonably anticipated STAMP noise sources and with the ambient noise.

2.1.3 The Application fails to assess the frequency and tone of the noise.

The Application fails to consider Factor #5. It fails to provide data and evidence, such as octave band and C-weighted values for receptor locations. The Application merely claims, without support or evidence, that, "The equipment associated with this project does not typically exhibit unusually high frequencies or contain low-frequency tones." Besides not providing any evidence for the lack of high frequencies or low-frequency tones, the statement ignores the likelihood of a strong low frequency content that may not be tonal in nature. The independent analysis to be performed by GHD must ensure neighbors will not experience low frequency noise and therefore should examine the CADNA noise modeling at receptor locations with low frequency noise in mind, and compare the future low frequency noise with existing low frequency ambient conditions. To do so, the noise modeling cannot utilize A-weighted or A-weighted octave band sound power levels as the input to the model, as Ramboll has done.

2.1.4 The Application fails to assess the Percentile sound levels.

The Application fails to consider Factor #6. This failure means we do not know the background noise level, the L_{90}, as discussed in the DEC noise guidance. This is critical, especially in areas such as the Big Woods.

2.1.5 The Application fails to provide necessary information for a noise assessment.

DEC noise guidance identifies three things "one **must** identify" to evaluate the impact of the noise:

> In order to evaluate the above factors in the appropriate context, one must identify the following: 1) appropriate receptor locations for sound level calculation or measurement; 2) ambient sound levels and characteristics at these receptor locations; and 3) the sound pressure increase and characteristics of the sound that represents a significant noise effect at a receptor location.
>
> DEC, 13

The Application fails to identify "2) ambient sound levels and characteristics" and "3) the sound pressure increase and characteristics of the sound." Moreover, with respect to the Big Woods, the Application fails to identify "1) appropriate receptor locations for sound level calculation or measurement" near the Big Woods. No ambient noise measurements were taken near the Big Woods. Consequently, no assessment of the increase of the ambient sound pressure can be conducted for the Big Woods.

2.1.6 The Application fails to consider the Thresholds for Significant Impact (DEC, 13-15).

According to the DEC noise guidance, "The goal for any permitted operation should be to minimize increases in sound pressure level above ambient levels at the chosen point of sound reception" (DEC, 13). In fact, the guidance goes on to state that, "In non-industrial settings the SPL should probably not exceed ambient noise by more than 6 dB(A) at the receptor" (DEC, 14). Moreover, the 65 dBA limit is really an upper bound, not the primary target:

> The addition of any noise source, in a nonindustrial setting, should not raise the ambient noise level above a maximum of 65 dB(A). This would be considered the upper end limit since 65 dB(A) allows for undisturbed speech at a distance of approximately three feet.
>
> DEC, 14

The 65 dBA/45 dBA analysis is only part of the SEQR noise analysis, as reflected in both the DGEIS and FGEIS. In fact, the FGEIS describes comparing noise levels with ambient levels: "The appropriate time to conduct a noise study identifying potential increases in sound levels is when a specific user decides to locate at STAMP" (FGEIS, 3-47). That is the exact situation we are in now, with STREAM being the specific user. But it has not occurred.

The Application's sole emphasis on the 65/45 dBA limit is not supported by either the DGEIS/FGEIS or the DEC noise guidance upon which it is based. The GHD noise analysis should recognize that the above ambient analysis was not completed, and the Application analysis is not consistent with the DEC noise guidance or the DGEIS/FGEIS.

2.2 The Application Fails to Evaluate STREAM Noise with respect to the Alabama Zoning Code

Alabama, New York has a zoning regulation concerning noise that the Application fails to consider when assessing the Project noise.

The relevant Alabama zoning regulations are given below.

> *'Section 104 Application of Regulations*
>
> *No building shall be erected, constructed, moved, altered, rebuilt or enlarged, nor shall any land, water or building be used, designed or arranged to be used for any purpose except in conformity with this Local Law. No buildings, structure, or premises shall be used, and no building or other structure shall be erected which is intended, arranged or designed to be used for any trade, industry, business or purpose of any kind, that is noxious by reason of the emission of odor, dust refuse matter, garbage, smoke, fumes, gas, noise or vibration, or that is dangerous to the health or safety of the community.'*

Alabama Zoning Code

Essentially, Alabama's zoning regulations prohibit noxious noise. Merriam-Webster defines the term "noxious." as 1) harmful and 2) disagreeable, obnoxious.

The Application claims, without any support, that "The modeled noise levels described below demonstrate that the Project is not anticipated to emit noise of a character or magnitude that would be considered 'noxious' within the meaning of the Town's Zoning Law." The problem is that the Application cites a decibel level of the facility to prove that the noise is not noxious, but doesn't tell us how or why the decibel level it cites is not noxious. It doesn't tell us what decibel level it thinks is noxious. The Application seems to assume that it is self-evident that the facility's decibel level is not noxious. That is not at all the case.

Fortunately, we have more than 75 years of research on the harmful and disagreeable impacts of noise. The World Health Organization and the US Environmental Protection Agency have written extensively about these issues. The harmful effects include hearing loss, sleep loss, and cardiovascular effects. The disagreeable effects include communication interference and annoyance.

In addition, the US EPA has a guidance document dedicated to these issues, Information on Levels of Environmental Noise Requisite to Protect Public Health and Welfare with an Adequate Margin of Safety (EPA, 1974) that is referenced in the FGEIS. This document is also referenced in the DEC noise guidance. Using the EPA guidance and correcting for the rural nature of the surrounding community in Alabama,[8] a 45 dBA daytime and a 35 dBA night time level is a reasonable estimate of the noise levels that may be harmful or noxious in Alabama.

In addition, the Project is located close to the Tonawanda Seneca Nation. The Nation's land is unique because it includes natural lands that have traditional and spiritual uses. The US National Park Service has a number of noise metrics (such as time audible) to reference when assessing noise impacts on natural lands, such as the Big Woods. Noise from STREAM has the potential to significantly impact the natural soundscape, and negatively impact the traditional and spiritual uses of the land. The time audible metric is needed to quantify the noise impact on traditional and spiritual uses of the Nation's Big Woods, and should help inform the meaning of "noxious" in the context of this proposal.

The Alabama Zoning Code cannot be ignored just because it does not have a decibel limit, just as the SEQR noise assessment cannot be ignored because the "significant impact" isn't strictly defined in terms of decibels. The Project noise must be assessed against both the numerical and narrative criteria provided by law and applicable guidance.

3. The Application Must Accurately Describe the Current Soundscape

To quote the DEC noise guidance, "In order to evaluate the (seven) factors, one **must** identify … ambient **sound levels** and **characteristics** at (receptor) locations" (DEC, 13). It is critical to accurately quantify the ambient soundscape for a noise analysis performed based upon the DEC noise guidance as contemplated in the DGEIS/FGEIS. This is particularly important in the case of STREAM, where loud noise sources number in the hundreds, and the surrounding areas include residential and natural soundscapes.

[8] EPA's document includes Table D-7 that provides the normalization factors the EPA used to normalize data from very diverse communities to develop a recommendation based on urban residential neighborhoods. For Alabama, there should be a 10 dBA adjustment from the baseline standard for a quiet rural community, giving a 45 dBA level. Given the DNL noise metric, that is essentially a 45 dBA daytime and a 35 dBA night time level. An additional 5 dBA adjustment of no prior noise exposure also likely applies. These are referred to as EPA adjusted noise levels.

Moreover, data centers have a well-known history of and reputation for causing significant noise impacts in the surrounding community.[9]

Given the potential for the facility to significantly impact the surrounding soundscapes, accurately identifying the character of the area is critical. A single decibel level alone is not sufficient in this case. Numerous noise metrics, including Lmin, L90, Leq, and time audible are needed. Moreover, A-weighting alone is not sufficient, given the necessity to evaluate the impact of potential low frequency noise on the surrounding soundscape. Therefore, octave band and C-weighted values are also necessary. Finally, the Big Woods is a unique area with natural, traditional, and spiritual uses; description of its ambient soundscape should include a time audible noise metric such as is used in the National Parks and other natural lands to truly understand the characteristics of the ambient environment. Moreover, the Applicant has failed to identify sufficient receptor locations to completely assess the impact on the Big Woods.

In support of its earlier proposal, STREAM's January 2025 Application noted the following about the ambient conditions in the area of the STAMP Site: "Current ambient conditions for the site are not known at this time. However, previous ambient noise surveys undertaken in the area indicate ambient noise levels less than 30 dBA during the nighttime period" (STREAM Application, January, 2025).

To date, STREAM has only provided an upper bound for the nighttime A-weighted ambient levels. But that upper bound indicates that ambient A-weighted levels are projected to increase by at least 14 dBA, well above the DEC noise guidance.

4. The Application Must Accurately Project the Future Noise Levels

In order to assess the impact of STREAM on the ambient noise conditions, not only does the Application have to provide the ambient conditions, it also must accurately project the future noise contribution from STREAM. The Application's projections are based on CADNA noise modeling. GCEDC cannot approve the Application without GHD analyzing the validity of the Applicant's CADNA noise modelling.

GHD needs to obtain the modeling files for both the 2026 and 2025 Applications. Without being able to examine the noise modeling, the Application's claims are unsupported and unverifiable.

---

[9]Here are a few of the headlines from just the last month:
A data center opened next door. Then came the high-pitched whine, Politico, 3-11-26.
NJ neighbors furious as giant AI data center hums 24/7 — and that's not all, New Jersey 101.5, 3-12-26
Elon Musk's makeshift AI power plant generates sound and fury in Mississippi, NBC, 2-26-26.
Amazon's Canton Data Center Promises Prosperity. For Neighbors, It's Bringing Dust, Noise and Pollution Fears, Mississippi Free Press, 2-13-26.

The 2025 modeling is also needed because there appear to be discrepancies between the results of the two models, calling into question the credibility of the noise models. Any differences in the models must be reconciled.

4.1.1 Maximum noise sound power levels must be used in the noise modeling unless independently verifiable and enforceable operational restrictions are included in the Application.

The Project's noisy equipment does not appear to be modeled at the maximum noise level. It appears that the daytime modeling relied on sound power levels corresponding to 70% fan speed, and the nighttime levels corresponding to 55%, for the chillers. These are not maximum levels, and with no enforceable operational restriction to ensure they are not exceeded, it is inappropriate to consider them the maximum case. Either the Project is "reserving" some excess cooling capacity to be used when needed or is specifying equipment with excess capacity. If the first case is true, then it should be modeled. If the second case is true, the Applicant should have no hesitation to agree to operational restrictions, or alternatively, specify smaller, quieter equipment that can be modeled at full capacity.

4.1.2 Modeling inputs should be in unweighted octave band values.

The modeling appears to have used A-weighted octave band sound power levels. A-weighted octave band levels are inappropriate as inputs for assessing the potential for low frequency noise on receptors (Factor 5 from the DEC noise guidance which is discussed in Section 2.1.3 above).

Low frequency noise is usually not present in rural and natural soundscapes. It also travels further, passes through walls and barriers easier, and is therefore more intrusive, often being heard in people's bedrooms at night, even with closed windows. As the World Health Organization notes with respect to its recommended noise levels, "in the presence of a large proportion of low frequency noise a still lower guideline value is recommended." The American National Standards Institute (ANSI) states that, "Research has shown that frequency-weighting A, alone, is not sufficient to address sounds characterized by tonality, impulsiveness, very fast onset rates, or strong low-frequency content."

Even the Acoustical Technical Summary notes that, "if the noise is unusually high at low frequencies or contains prominent low frequency tones, the A-weighting may not give a valid measure." Whether there are high low-frequency noise levels compared to the ambient conditions is an empirical question that can be answered with octave band measures of the existing ambient conditions and unweighted sound power inputs in the CADNA noise modeling.

Low frequency noise concerns were not anticipated in the GEIS but needed to be addressed when considering the Project. Moreover, low frequency noise is a common complaint about data centers and should be investigated, but cannot without using unweighted octave band sound power levels as inputs.

4.1.3 All noise sources must be used in the model's maximum noise case.

Ramboll has modeled two noise sources, chillers and generators. Currently, there are numerous unmodeled noise sources that need to be addressed in the CADNA modeling. Construction noise was not modeled. The DEC noise guidance notes: "The initial evaluation for most facilities should determine the maximum amount of sound created at a single point in time by multiple activities for the proposed project. All facets of the construction and operation that produce noise should be included …."

The substation was also not modeled. There appear to be a number of HVAC systems in the Axon that were not modeled. There are also potentially hundreds of unidentified pieces of equipment in the Axon and Site Plans that were not modeled.

4.1.3 List of concerns GHD should address with respect to accurately project the future noise levels.

GHD noise analysis should address and investigate, at a minimum, the following issues with respect to quantifying the maximum noise of the facility:

1. The noise modeling doesn't match or utilize the Site Plan noise source locations.
2. Investigate and reconcile differences between STREAM's 2025 and 2026 noise modeling.
3. The modeling must be based on an actual and complete site plan that is intended to be built, not a hypothetical site plan.
4. The type, heights and locations of noisy equipment and barriers in the modeling must be the same as in the complete Site Plan.
5. Modeled sound power levels should be the maximum sound power of the particular units operating at 100% to obtain the maximum impact of the units. If the chillers truly have excess and unnecessary capacity, the Applicant should specify smaller, quieter units, otherwise the units should be modeled at their maximum.
6. Unless the Application includes independently verifiable and enforceable operational restrictions to limit fan speed to 55%, the nighttime modeling should use the same maximum 100% load and fan speed sound power inputs as the daytime.

7. The noise modelling report misleadingly portrays what it calls the "Peak Operation" as a maximum condition, but it defines Peak Operation as "typical." "Typical" does not represent maximum.[10] GHD should report the worst case or maximum conditions, which occurs when all noise sources are operating at their maximum, including all chillers and generators and substation and other noise sources.
8. All sound power modeling inputs should be in octave band values and not just A-weighted or A-weighted octave band levels.
9. The list of noise sources in the model is incomplete. [11]
10. The modeling should be based on all noise making equipment, including the substation, air handling systems, and whichever of the hundreds of unidentified boxes and cylinders on the roof and in the Gen Yard produce noise.
11. The maximum case must include all generators operating, as STREAM is asking for 500 hours of operation annually for its generators, or the equivalent of nearly 21 days of operation. 500 hours of operation is not consistent with the noise modeling report's description of their use as "extremely infrequent," and consequently generator use should be considered part of the maximum noise scenario.
12. Construction noise should be modeled.
13. Obtain a copy of ISO 9613-2 and verify that the Application's representation of the accuracy of the modeling is correct, particularly at distances greater than 100 meters.
14. Account for the accuracy of the modeling in predicted maximum noise levels. ISO 9613 states that the maximum noise level can be greater than the level calculated with its equations. The accuracy of the model should be added to the CADNA output to produce a true maximum noise level.
15. Calculate the C-A weighted values, as well as octave band levels, at receptor locations to assess the potential for low frequency noise impacts.
16. Ensure a true cumulative impact assessment where the ambient levels are presented to the GCEDC and public in a table, in which the ambient levels are added to the projected project levels.
17. Quantify the limitations for future expansion and use of the STAMP site given STREAMs consumption of the above ambient capacity in a SEQR analysis.

[10] "**Peak Operations** This represents the facility's typical 24/7 operational profile." (Acoustical Technical Summary, no page numbers given.)

[11] From the DEC noise guidance, page 16: "The initial evaluation for most facilities should determine the maximum amount of sound created at a single point in time by multiple activities for the proposed project. All facets of the construction and operation that produce noise should be included such as land clearing activities (chain saw and equipment operation), drilling, equipment operation for excavating, hauling or conveying materials, pile driving, steel work, material processing, product storage and removal."

Summary

If GHD compares the Applicant's noise modeling with the Site Plans, they will quickly learn that the two are vastly different, and that Ramboll has merely modeled a hypothetical data center, without a complete list of noise sources, and without accurate locations and heights of noise sources and barriers. Moreover, the Acoustical Technical Summary fails to evaluate the Project against the appropriate regulatory criteria, and in particular, it fails to assess the increase of the ambient noise levels and fails to examine the impact of the noise on the unique, traditional, and spiritual uses of the Big Woods. Finally, the noise modeling fails to capture the maximum noise emitted by the Project and therefore, fails to quantify the true noise impact required by a "hard look."

ATTACHMENT 2

Comments Regarding STREAM's Proposed Data Center

Author: Bryndis Woods, PhD

Date: April 9, 2026

Executive Summary

In January 2026, STREAM U.S. Data Centers, LLC (STREAM) applied to the Genesee County Economic Development Center to construct a 2.2 million square-foot data center campus in the Town of Alabama, New York, located in Genesee County. On behalf of Tonawanda Seneca Nation and Sierra Club Niagara Group, these comments address STREAM's proposed data center, including its claimed costs and benefits for the local community.

Key findings include:

- The project would require 500 megawatts (MW) of electricity, approximately four times the total generation capacity currently operating in Genesee County (122 MW).
- STREAM does not provide any supporting materials for its cost-benefit analysis (CBA), which fails to meet standards expected in a public decision-making process and is insufficient to determine whether the proposed project would provide net benefits for the local community.
- STREAM's CBA results differ substantially from one CBA to the next: total costs increased from $472 million to $781 million to $1.4 billion, and total benefits vary from $1.2 billion to $2.6 billion.
- STREAM has failed to address potential costs associated with the project, including: effects on property values, effects on tourism and recreation, utility bill impacts, public health impacts, the cost of public infrastructure required for the project, or the local disturbances associated with project development such as placing cables and fiber optic lines.
- STREAM's job creation estimates exceed values found in publicly available data and information, average publicly available estimates indicate that the proposed project would create about 4,100 fewer direct temporary jobs than the Company claims, and 1,300 fewer indirect temporary jobs than the Company claims.
- STREAM has requested a local sales tax abatement and mortgage recording tax abatement, which—taken together—are worth 25 times more than the benefits provided by the proposed PILOT/Host payments.
- Valuing data centers is challenging and complex: if STREAM's proposed data center's assessed property value is incorrect, that would impact the ratio of the Company's PILOT/Host payments relative to their waived property taxes.
- STREAM's proposed data center is near the Tonawanda Seneca Nation's ancestral forest The Big Woods, Iroquois National Wildlife Refuge, the Tonawanda Wildlife Management Area, and the Oak Orchard Wildlife Management Area and may negatively impact local tourism and recreation, which are an integral part of the community and economy.

Introduction

The United States is the world's largest data center market and data centers are expected to continue to grow rapidly with impacts for communities all around the nation.[1] As data centers have grown, more communities are grappling with what it means to have a data center for a neighbor, and public opposition has grown. According to a research report from Data Center Watch—a firm tracking data center opposition—data center developments worth a combined $64 billion were either blocked or delayed between May 2024 and March 2025, due, at least in part, to local opposition efforts.[2] The report also found that opposition to data centers "cuts across political lines…and marks a rare area of bipartisan alignment in infrastructure politics."[3] According to The Brookings Institution's research summary of America's Rural Future virtual symposium, which "examined the local implications of AI and data center development for rural communities across the United States," rural community representatives emphasized the importance of "trusted information, transparency, fairness, clear guidelines, and governance capacity to ensure inclusive processes that advance community interests" including by establishing "clear, measurable local benefits."[4] Here, it is important to note that STREAM has not disclosed who the tenant of the data center campus will be, nor has it disclosed how various costs and benefits will be allocated between STREAM and the tenant, despite acknowledging that such allocations exist.[5]

Common concerns among local communities where data center developments are proposed include higher utility bills, water consumption, noise, and impacts on property values and green spaces.[6] The remainder of these comments address all those concerns, except higher utility bills for which detailed quantitative analysis is recommended. The timeline of the proposed data center development at issue in these comments did not permit assessment of the project's potential impact on utility rates and bills. However, it is important to note that in the three states with the highest concentration of data centers—Illinois, Virginia and Ohio—electric bills were 16, 13 and 12 percent higher in August 2025 (respectively) than a year prior, more than double the national average electric bill increase.[7] Across the country, electric bills have been increasing faster than inflation—the increases were more than double the rate of inflation in 2025—and data center developments are important to understanding why. Their high energy demand, the cost of new electric infrastructure they require, and ongoing electric maintenance costs are all costs

shared across all electric customers in the same utility service area.[8] According to a Bloomberg News analysis from 2025, areas near new data centers saw an increase in electricity costs of as much as 267 percent compared to 2020.[9]

On behalf of Tonawanda Seneca Nation and Sierra Club Niagara Group, these Applied Economics Clinic comments address STREAM's proposed data center, including its claimed costs and benefits for the local community. We determine that the materials the Company has provided are incomplete and insufficient to determine whether the proposed project would provide net benefits for the local community. Finally, we highlight three potential costs that are omitted from the Company's materials: lower-than-claimed local job creation, effects on property values, and effects on tourism and recreation. We would like to emphasize that these three costs are not comprehensive of all the costs from the proposed data center that ought to be considered. Additional potential costs include effects on utility bills (as discussed above) and effects on public health (due to the emissions from on-site diesel-fired backup generators).[10]

About STREAM's proposed data center

In January 2026, STREAM U.S. Data Centers, LLC (STREAM or The Company) applied to the Genesee County Economic Development Center (GCEDC)—a public agency that offers tax breaks and other economic incentives to attract private business—to construct a 2.2 million square-foot data center campus at the Western New York Science & Technology Advanced Manufacturing Park (STAMP) in the Town of Alabama, New York. STREAM's parent company is Apollo Global Management (Apollo), one of the world's largest private equity firms reporting assets worth about $450 billion in September 2025.[11] (Apollo is being sued by its shareholders in a proposed class action for "allegedly defrauding them for nearly five years about [Apollo's] business dealings with disgraced sex offender and financier Jeffrey Epstein").[12] The proposed

data center campus includes three, two-story buildings on a 90-acre footprint. An additional 40 acres will be "utilized as temporary construction logistics areas in support of the project."[13] The project would require 500 megawatts (MW) of electricity, which is approximately four times the total generation capacity currently operating in Genesee County (122 MW).[14]

Source: STREAM. February 18, 2026. "Visual Impact Analysis Technical Summary." Available at: https://www.gcedc.com/file-library/100319/STREAMUSDataCentersLLC.SEQRDevelopmentApplication.2.18.26.III.B.VisualImpactAnalysisTechnicalSummary.pdf.

The Town of Alabama is in Genesee County, between Buffalo and Rochester, sits on approximately 28,500 acres, and has a population of approximately 1,800 with a median household income of $64,000. About 5,700 acres within the Town's borders is sovereign land of the Tonawanda Seneca Nation, and the proposed project site borders the Tonawanda Seneca Nation's ancestral forest, The Big Woods (see Figure 1).[15] Several wildlife preserves occupy much of the Town's land, including the Iroquois National Wildlife Refuge, the Tonawanda Wildlife Management Area, and the Oak Orchard Wildlife Management Area.[16]

STREAM's claimed costs and benefits

According to STREAM's most recent project application, the total cost of the project is estimated at $19.5 billion: an $8.3 billion increase from the previous version of the Company's application filed just one month prior,[17] and a $13.2 billion increase from the Company's original application filed in early 2025 (see Figure 2 below).[18] (Note: the Company's 2025 application was withdrawn after the Tonawanda Seneca Nation and Sierra Club filed a lawsuit with the New York State Supreme Court that alleged that GCEDC violated state law by failing to conduct a full environmental review.[19]) The Company's estimated total costs include: 1) construction costs; 2) costs to purchase the land; 3) building costs including engineering costs, architect costs, and blueprint fees; and 4) other equipment costs, including computers, furniture, etc.[20]

Figure 2. STREAM data center estimated total cost (billions $)

[20] Genesee County Economic Development Center. February 27, 2026. *Application for Financial Assistance.*

As part of its application, STREAM contracted with a third-party (MRB Group) to conduct a series of cost-benefit analyses (CBA) of the proposed project, comparing the project's expected costs with its expected benefits.[21] The costs reflected in the Company's CBA are tax exemptions (see Table 2 below). The Company's March 2026 CBA report notes that STREAM "will be submitting a separate economic impact study based on industry experience," but no such study has been made available on GCEDC's project website yet.[22]

Three CBAs have been submitted by the Company: the first in February 2025, the second in January 2026, and the third in March 2026. All three CBAs claim that STREAM's benefits will outweigh the limited costs included in the studies:

- The February 2025 CBA concluded that local benefits would outweigh costs 5-to-1,
- The January 2026 CBA concluded that local benefits would outweigh costs 7-to-1, and
- The March 2026 CBA concluded that local benefits would outweigh costs 3-to-1.

The most recent (March 2026) CBA maintains that benefits stem from: 1) new wages from job creation; 2) new revenues to municipalities and schools from Payment in Lieu of Tax (PILOT)[23]/Host payments; 3) new sales tax revenue from the project's electrical usage; 4) new revenues to the Town of Alabama Fire District due to annual fire district fees; 5) Company investments in electrical infrastructure needed to support the project; and 6) project fees being reinvested by GCEDC to support projects that benefit Genesee County.[24] Only some of these benefits are monetized in the BCA analyses performed by the Company (see Table 1). It is important to note that the Company maintains that investments in electrical infrastructure needed to support the project is a benefit for the local community, but the primary beneficiary of additional electrical infrastructure required for the project is STREAM itself, not the local community that hosts said infrastructure.

All three studies fail to include key potential costs to the local community, such as higher utility bills, impacts of increased water consumption, noise pollution, impacts on property values, effects on green spaces, the cost of public infrastructure required for the project, or the local disturbances associated with project development such as placing cables and fiber optic lines.

STREAM's CBA results differ substantially from one CBA to the next: total costs increased from $472 million to $781 million to $1.4 billion. Total benefits also varied considerably: from $1.2 billion to $2.6 billion to $2.2 billion (see Table 2). Even though total estimated benefits fell between the January 2026 CBA and the March 2026 CBA, two benefit categories increased substantially: sales tax revenue, which increased by $190 million, and other municipal revenue, which increased by $259 million.

[22] Stream US Data Centers Project - Cost Benefit Calculator. March 2026. PDF page 3.
[23] PILOT payments are agreements—some are legally mandated and others are voluntary—that can help communities recoup lost revenue that is a result of state property tax exemptions.
[24] Stream US Data Centers Project - Cost Benefit Calculator. March 2026.

Table 1. Benefits included in the Company's BCA analyses

Company's Claimed Benefits	February 2025 BCA	January 2026 BCA	March 2026 BCA
1) New wages from job creation	Yes	Yes	Yes
2) New revenues to municipalities and schools from Payment in Lieu of Tax (PILOT) /Host payments	No	Yes	Yes
3) New sales tax revenue from the project's electrical usage	Yes	Yes	Yes
4) New revenues to the Town of Alabama Fire District due to annual fire district fees	No	No	Yes
5) Company investments in electrical infrastructure needed to support the project	No	No	No
6) Project fees being reinvested by GCEDC to support projects that benefit Genesee County	No	No	No

Data sources: 1) STREAM Cost Benefit Calculator, February 2025; 2) STREAM Cost Benefit Calculator, February 2026; 3) STREAM Cost Benefit Calculator, March 2026.

Table 2. Comparison of Company's CBA analyses (millions $)

		February 2025 BCA	January 2026 BCA	March 2026 BCA	Jan 2026 to Mar 2026 Comparison
Costs	Property Tax Exemption	$0	-$20	-$58	-$39
	Sales Tax Exemption	$463	$769	$1,432	$662
	Mortgage Recording Tax Exemption	$9	$31	$31	$0
	TOTAL	**$472**	**$781**	**$1,405**	**$624**
Benefits	Payroll	$874	$1,979	$1,139	-$840
	Property Tax Revenue	$103	$207	$206	-$1
	Sales Tax Revenue	$12	$28	$218	$190
	Income Tax Revenue	$134	$89	$51	-$38
	Other Municipal Revenue	$82	$345	$604	$259
	TOTAL	**$1,205**	**$2,647**	**$2,217**	**-$430**

Data sources: 1) STREAM Cost Benefit Calculator, February 2025; 2) STREAM Cost Benefit Calculator, February 2026; 3) STREAM Cost Benefit Calculator, March 2026.

One of the primary benefits of the project touted by the Company (and represented in publicly available information regarding the costs and benefits of data centers[25]) are STREAM's PILOT/Host payments to Genesee County, the Town of Alabama and the Oakfield-Alabama School District. STREAM notes that it has "agreed to pay $7 million in base annual PILOT/Host payments," which will total "more than $283.9 million in new revenue over 30 years"—$84.8 million more than what their waived property taxes would have

[25] See, for example: 1) S&P Global. Available at: March 24, 2026. "Everywhere, All At Once: How The Growth Of Data Centers Could Carry Risks For U.S. Local Governments." Available at: https://www.spglobal.com/ratings/en/regulatory/article/everywhere-all-at-once-how-the-growth-of-data-centers-could-carry-risks-for-us-local-governments-s101673051; 2) Gorey, J. October 17, 2025. "Data Drain: The Land and Water Impacts of the AI Boom." Lincoln Institute of Land Policy.

been over the same period (or $58.3 million on a discounted basis).[26] This benefit is actually included as a negative cost line item in the Company's BCA (see the "property tax exemption" line in Table 2).

However, the Company has also requested a local sales tax abatement of 4 percent, which amounts to a $1.4 billion cost in the Company's most recent CBA ($662 million more than the same cost line item in the Company's January 2026 CBA). STREAM has also requested a 0.5 percent abatement of the mortgage recording tax, which amounts to a $31 million cost in both 2026 versions of the CBA.[27] Taken together, these two costs are **25 times greater** than the benefits provided by the PILOT/Host payments.

STREAM's CBAs are insufficient to determine the true costs and benefits of the proposed project

The CBA results provided by STREAM are incomplete and insufficient to determine whether the proposed project would provide net benefits for the local community for multiple reasons. Key concerns with STREAM's CBA analyses include:

- **Lack of supporting materials:** The Company does not provide supporting materials to demonstrate the costs or benefits of the project. For example, STREAM fails to provide materials that support the Company's assertion that the project will create 6,000 temporary construction jobs over five years. This failure to provide support materials does not meet the standards expected in a public decision-making process.
- **Significant changes in cost and benefit line items without explanation:** The Company's CBA analysis and results changed significantly between each version of the CBA, but the Company has not provided any explanation regarding the reasons for those changes. For example, the Company fails to explain why the March 2026 CBA included a new benefit line item—"ongoing sales tax revenue on electricity," a benefit valued at $201.6 million—that was not included in the January 2026 CBA.
- **Inflated job benefits:** The Company's job creation estimates exceed values found in publicly available data and information. The Company anticipates that the project will create 7,766 direct and indirect temporary jobs and 223 direct and indirect permanent jobs, and makes payroll benefit estimates on that basis. However, the U.S. Chamber of Commerce Technology Engagement Center has found that a "typical large data center" creates many fewer jobs: approximately 1,700 direct and indirect temporary jobs and 157 direct and indirect ongoing jobs.[28] Similarly, The Brookings Institution determined that "even in large-scale centers, construction jobs often total around 1,500 skilled trade workers and 100 operational jobs."[29]

[29] Lee, N. T., West, D. M. November 5, 2025. "The future of data centers." Brookings.

- **Missing costs:** All three of the Company's CBA analyses fail to include any costs beyond sales and mortgage tax exemptions (property tax exemptions are listed as a cost line item, but are negative, meaning they reflect the projected benefit of PILOT/Host payments as described above). The Company has failed to identify or assess various potential costs associated with the project, including: effects on property values, effects on tourism and recreation, costs associated with air pollution from the proposed facility's backup diesel generators, utility bill impacts, public health impacts, the cost of public infrastructure required for the project, or the local disturbances associated with project development such as placing cables and fiber optic lines.

STREAM's provision of comprehensive information regarding the anticipated costs and benefits of the proposed project to ensure that local communities—including Town of Alabama residents and the Tonawanda Seneca Nation—is essential to good public decision making and to making sure impacted communities have an accurate understanding of the costs and other risks to which they are exposed. The remainder of these written comments describe potential costs of the proposed project that the Company has omitted in its CBA analyses or its various application materials to date.

Costs omitted (and benefits inflated) in STREAM's CBA

All three of STREAM's CBA studies failed to include key project costs, such as capital costs like construction costs or equipment costs, as well as other potential costs of the project, such as higher utility bills, impacts of increased water consumption, costs associated with air pollution from the proposed facility's backup diesel generators, noise pollution, impacts on property values, or effects on green spaces, tourism, and/or recreation. Given the limited timeline in which to produce these comments ahead of key decision-making regarding the proposed project, these comments address two potential costs that the Company failed to consider—effects on property values and effects on tourism and recreation—and provide a revised estimate of the Company's claimed job creation benefit.

Effects on local employment

STREAM's job creation estimates exceed values found in publicly available data and information. The Brookings Institute has found that the "employment benefits of data centers are variable and often overstated," and highlights the need—particularly in rural communities—to focus on job quality, duration, and how to make new positions attainable for residents.[30] There is broad consensus that the primary local benefit of data centers is tax revenue and PILOT payments because data centers do not create many permanent jobs and the temporary jobs created during their construction phase are of limited benefit to local communities.[31]

AEC reviewed publicly available literature regarding data center job creation estimates, which is summarized in Table 3 below. STREAM estimates that the proposed project will create 12 direct,

[30] Pipa, A. F., Aley, A. March 2, 2026. "The local implications of data centers for rural communities in the US."
[31] Gorey, J. October 17, 2025. "Data Drain: The Land and Water Impacts of the AI Boom." Lincoln Institute of Land Policy.

temporary jobs per megawatt (MW) and 3.5 indirect, temporary jobs per MW—estimates that are much higher than other publicly available values from the literature. In recent studies of data center job creation, direct, temporary job creation estimates range from 0.7 to 6.4 jobs per MW and indirect, temporary job creation ranges from 0.4 to 1.6 jobs per MW.

Table 3. Data center job creation estimates (jobs per MW)

		Direct	Indirect
Temporary	STREAM	12.0	3.5
	UCS	0.7	0.7
	Johnson Economics	6.4	0.4

Available at: https://www.rowanfrederick.com/faqs.

If STREAM's temporary job creation estimates are corrected to reflect average publicly available estimates, the proposed project would create 1,898 direct temporary jobs (about 4,100 fewer than the Company claims) and 452 indirect temporary jobs (about 1,300 fewer than the Company claims). STREAM also estimates that the proposed project will create 0.3 direct, ongoing jobs per MW and 0.1 indirect, ongoing jobs per MW: These estimates are more in line with other publicly available estimates from the literature. It is important to note that permanent jobs are usually of greater benefit for local populations than temporary jobs, though STREAM has not provided any information about ensuring that job creation benefits local populations specifically.

According to the Company's most recent BCA analysis, STREAM will receive $1.4 billion in tax exemptions from GCEDC. If the Company's ongoing job creation estimates are correct, STREAM would be given an astounding $8.3 million in tax breaks per direct, ongoing job created. Across all of the publicly available data and information reviewed, experts broadly agree that data centers do not require many employees once they are built, with The Brookings Institution noting that is because they "largely consist of file servers and networking equipment," which means that "other community benefits may be more salient for

regions expanding their data center footprint."[32]

Effects on property values

Based on a review of publicly available information, the effect of data centers on property values does not appear to be uniformly negative or positive—the answer to "how will a new data center impact the property values of the residents who live near it?" is, ultimately, "it depends." In high-growth real estate markets, home prices have continued to rise despite new data centers coming online nearby.[33] However, potential buyers consider home prices along with other factors, such as utility costs, light pollution, and ambient noise, when deciding whether a community is attractive.[34] In addition, rising property values can price out first-time home buyers and can be negative for longtime and/or lower-income homeowners due to rising property taxes.[35] Ultimately, the proximity of a data center to one's home—and the buffers that exist between it and the community, such as noise mitigation and landscaping—is the most important variable in terms of its effect on property value and attracting potential buyers.[36]

In addition, evidence suggests that the methods used to assess the property value of data centers themselves are inconsistent across jurisdictions, and that assessors often lack the specialized expertise in data center valuation needed to assess their fair market value effectively. For example, the value of data centers is derived from more than the land they sit on—data centers require extensive electric and cooling infrastructure to operate as well as extensive and valuable technological equipment. However, the speed at which technology becomes obsolete calls for rapid depreciation of specialized technological equipment, which should be considered separately from the value of real estate.[37] While technological equipment can be removed and, therefore, considered separately from the value of the real estate, some of the infrastructure needed to operate a data center is integrated into the building in such a way that removing it is cost-prohibitive or impossible.[38] These complexities pose valuation challenges that require a more nuanced, specialized valuation approach. It is important to note that—if STREAM's proposed data center's assessed property value is incorrect—that would impact the ratio of the Company's PILOT/Host payments

relative to their waived property taxes.

Effects on tourism and recreation

In Genesee County, tourism and recreation are an integral part of the community and economy: STREAM's proposed data center borders the Tonawanda Seneca Nation's ancestral forest, The Big Woods, and is in close proximity to various wildlife preserves, including the Iroquois National Wildlife Refuge, the Tonawanda Wildlife Management Area, and the Oak Orchard Wildlife Management Area.[39] Empire State Development of New York State's *2024 Tourism Economics Report* found that, in Genesee County, visitors spent $144.5 million in 2024, generating about $331.1 million in direct personal income for county residents, creating about 11,000 direct jobs and about 5,000 indirect jobs, and generating $8.8 million in local tax revenue—equal to $665 in tax savings per household.[40] It is crucially important to understand that STREAM's proposed data center may negatively impact local tourism and recreation—for example, the project could diminish local water bodies like the Oak Orchard Creek or Tonawanda Creek, and create noise and/or light pollution that permeates into local wildlife preserves. As with so many other communities where proposed data centers are to be located, Tonawanda Seneca Nation fear STREAM's proposed data center "could harm the old-growth forest they rely on for medicinal plants and hunting, primarily due to 24/7 lights and noise emitting from the facility."[41] In July 2025, the County of Orleans Department of Tourism (Orleans County is located directly north of Genesee County) prepared a statement at a community meeting regarding the proposed data center that detailed their concerns regarding the impact of the proposed data center on the Oak Orchard River and the impacts that would create for Lake Ontario and associated tributary waters, noting that "the good health and non-impacted water of the Oak Orchard River is vitally important to the fishery and boating interests which support the tourism economy for Orleans County."[42]

Batavia, NY 14020

RE: STAMP – Project Double Reed SEQR Lead Agency Coordination

Dear Mr. Masse:

This letter responds to your December 23, 2025, letter received by DEC on December 29, 2025, regarding SEQR lead agency coordination for the project referenced herein.

Name of Action and Brief Project Description:
Project Double Reed
STAMP – Stream US Data Center

Project Double Reed would consist of the construction of three two-story data center Buildings, using 500 megawatts of energy per year, totaling approximately 2.2 million square feet across approximately 90 acres, and infrastructure improvements to support the same. An additional 40 acres of the STAMP Site (one area adjacent to the Edwards facility and one area to the north of the Plug Power site) would be utilized as temporary construction/logistics areas.

DEC Permits (if any): SPDES General Permit for Construction, Bulk Storage Registration, and Air Permit/Registration.

DEC Contact Person: Ashley Kasperowicz

SEQR Classification: [X] Type I [ ] Unlisted

DEC Position: Based on the information provided and representations made by GCEDC:

[ ] DEC does not object to GCEDC assuming lead agency status for this action.

[ ] DEC wishes to assume lead agency status for this action.

[X] DEC does not have discretionary permitting jurisdiction over this action to support lead agency status. However, additional project information and formal

applications/submissions are required before DEC can make a final determination on any potential regulatory authority including required permitting. DEC is an interested agency.

Comments: [X] see attached [ ] none

If you do not concur with the DEC position indicated above, please contact this office to resolve designation of lead agency within the time allowable under Part 617.

Please feel free to contact this office for further information or discussion.

Sincerely,

Ashley Kasperowicz

Ashley Kasperowicz
Deputy Regional Permit Administrator

NYSDEC Additional SEQR Lead Agency Coordination Comments:

Please note that DEC just received on January 26, 2026, additional documentation related to Project Double Reed sent via link in a Weekly STAMP Update email, which DEC needs an opportunity to review. DEC reserves the right to supplement or revise any comments herein upon completion of our review of that submission or any other documents received thereafter, such as documentation related to the northern campus.

DEC has reviewed the information received on December 29, 2025, regarding the lead agency coordination for Project Double Reed, located on two separate parcels at the WNY STAMP site. Project Double Reed would consist of the construction of three two-story data center buildings totaling approximately 2.2 million square feet across approximately 90 acres and infrastructure improvements to support them. The three data centers would use a total of 500 megawatts of electricity per year. An additional 40 acres of the STAMP site (one area adjacent to the Edwards facility and one area to the north of the Plug Power site) would be utilized as temporary construction/logistics areas. Please find the following comments for the project.

SEQR Coordination and Establishment of Lead Agency

DEC does not object to GCEDC being reestablished as SEQR lead agency for the environmental review of this action. Based on the project information submitted and representations made by GCEDC, DEC is likely not an involved agency for the Double Reed project; however, DEC requires additional project information and formal applications/submissions before a final determination can be made on any potential regulatory or permitting authority. In any event, DEC is an interested agency under SEQR for the Double Reed project.

DEC recommends a supplemental Environmental Impact Statement (SEIS) be prepared for data centers as their impacts do not appear to have been adequately addressed in GCEDC's 2012 GEIS or its subsequent updates, which should be published on a publicly available website, in accordance with 6 NYCRR 617.12(c)(5). The Department also recommends that a supplemental EIS be prepared for the STAMP site to address new laws and regulations (such as the Environmental Justice Siting Law and the revised 6 NYCRR Part 664 Freshwater Wetlands Regulations) and to evaluate updates to the STAMP Site, its goals, its tenants, and any other originally unanticipated changes in how the STAMP Site is being developed.

Whether or not GCEDC prepares a supplemental GEIS for the Double Reed project, at a minimum, DEC recommends that a new SEQR Full Environmental Assessment Form (FEAF) be completed for Project Double Reed using the updated draft FEAF, which contains questions to help evaluate the impact projects will have on Disadvantaged Communities. A link to the draft FEAF and additional guidance documents can be found on our website here: https://dec.ny.gov/regulatory/regulations/proposed-emergency-recently-adopted-regulations/state-environmental-quality-review-act-regulatory-revisions.

While the form has not been finalized, the legislative amendments to SEQR incorporating the Environmental Justice Siting Law are in effect. Therefore, it would be prudent of GCEDC to complete the draft forms that incorporate questions that implement the Environmental Justice Siting Law.

As stated above, DEC recommends that a supplemental EIS should be prepared for the Double Reed project for the following reasons:

- The proposed data centers are at or above the maximum buildable acreage and building area referenced in the 2012 DEIS.
- The 2012 GEIS did not consider potential impacts to Disadvantaged Communities, which is required by the Environmental Justice Siting Law.
- One of the economic benefits identified in the original GEIS was that the STAMP site would support over 9,000 full-time equivalent jobs at full build-out and occupancy. GCEDC should evaluate how a facility that will utilize 130 acres (90 acres of permanent disturbance and 40 acres of temporary disturbance), which is more than 20% of the 618.18 acres of buildable STAMP site area but only support 120 jobs, helps achieve the economic benefit of providing 9,000 jobs at full build-out.

DEC also recommends GCEDC prepare a detailed construction impact analysis and a detailed data center operations impact analysis as part of the SEQR review. DEC also notes that the results of the noise analysis conducted for Project Double Reed must be considered prior to a SEQR determination being made. In addition, a single tenant using 500 MW of the STAMP site's energy allocation is likely to limit the development of the STAMP site.

DEC received a link to additional information related to the southern campus data center on January 26, 2026. As a reminder, DEC does not consider documents sent in the Weekly STAMP Update emails to be formal submissions to the DEC. The documentation and the Weekly STAMP Update email transmitting that documentation contained inconsistencies with the information contained in the FEAF for the Double Reed project. For example, please note the following:

- The FEAF lists the total sanitary wastewater discharge as 20,000 GPD
    - The Weekly STAMP Update email lists the total sanitary wastewater discharge as 10,000 GPD
    - The BUFA Stream South Engineers Report document lists the sanitary wastewater discharge as 3,150 GPD
- The FEAF lists the building height as 110'
    - The building height listed in the BUFA Civil Permitting Plans is 56'

Biotic Communities/Endangered and Threatened Species of Flora and Fauna

DEC has reviewed the available information in the New York State Natural Heritage Program databases for known occurrences of federally-listed or proposed endangered or threatened species; state-listed endangered, threatened or rare animal and plant species; significant natural communities; and other significant habitats. Some occurrences were found in the vicinity of the project site; however, an existing 6 NYCRR Part 182 Incidental Take permit, 8-1820-00032/00003, covers the buildable area of the STAMP Site (approximately 665 acres) for the incidental take of short eared owl (*Asio flammeus*) and northern harrier (*Circus hudsonius*). There are no other species occurrences at this location, so no additional permits for endangered or threatened species will be required for this project.

Article 15 Protection of Waters

The streams in the project area have a NYS Stream Classification of Class C and are therefore not considered NYS protected water bodies. A determination has been made that the streams would not be considered navigable as defined in the Protection of Water Regulations (6 NYCRR Part 608). As these sections of stream are not navigable or protected, disturbance of the stream's channels and banks will not require an Environmental Conservation Law (ECL) Article 15 permit from the DEC. However, your project may be subject to Federal regulations. You should contact the United States Army Corps of Engineers (Corps) at the Buffalo District Office, 478 Main St., Buffalo, New York 14202. They can also be reached by phone at (716) 879-4330. Regardless of whether a permit is required, standard sedimentation and erosion controls should be employed to avoid contravention of water quality standards.

Article 24 NYS Freshwater Wetlands

Portions of New York State regulated freshwater wetlands and their adjacent areas may be located within the STAMP site. As set forth in the Department’s June 11, 2025, letter, pursuant to 6 NYCRR Part 664.1(d), the revised Part 664 Freshwater Wetlands Jurisdiction and Classification regulations are not applicable to on-site disturbances on the STAMP site until January 1, 2027, for projects determined to be minor in accordance with 6 NYCRR Part 621, or July 1, 2028, for projects determined to be major in accordance with 6 NYCRR Part 621.

Any construction activities for Project Double Reed that will extend beyond either of the above dates will need to be evaluated for potential wetland impacts to determine if a freshwater wetland permit will be required. It should be noted that a high percentage of the soils present on the STAMP site are mapped as poorly drained, so a resurgence of wetlands is possible.

Federal Wetlands

While the Department asserts jurisdiction over NYS regulated freshwater wetlands, the Corps regulates federally protected wetlands. As noted above, for questions regarding federal wetlands, and the federal permitting process, contact the Corps at: Chief, Regulatory Branch, U. S. Army Corps of Engineers, Buffalo District, 478 Main St., Buffalo, New York 14202 or (716) 879-4330.

Section 401 Water Quality Certification (WQC)

Work in certain waters and wetlands of the United States may require a permit from the Corps. If a Corps permit is required, the Corps may request that the DEC make a determination (Water Quality Certification, pursuant to Section 401 of the Federal Clean Water Act) that discharges from the proposed activities, for which an applicant is seeking a Corps permit approval, will comply with the applicable effluent limitations, water quality standards, and any other applicable requirements of State law.

Documentation in support of a 401 Water Quality Certification would include demonstration of compliance with either the Department's State Pollutant Discharge Elimination System (SPDES) General Permit for Stormwater Discharges from Construction Activities (GP-0-25-001) or the Municipal Separate Storm Sewer System (MS4) permit. This documentation would include submission of a completed Notice of Intent and, in an MS4 area, a copy of the local municipality's approved MS4 Stormwater Pollution Prevention Plan (SWPPP) Acceptance Form as part of a complete application. The actual SWPPP could also be required to be submitted to the Department depending on the project.

Stormwater General Permit – Construction

This project will need to be compliant with the SPDES General Permit for Stormwater Discharges from Construction Activities (GP-0-25-001). Construction activities that involve one acre or more of land disturbance must obtain SPDES stormwater permit coverage through either an individual permit or GP-0-25-001. To obtain authorization under GP-0-25-001, a Stormwater Pollution Prevention Plan (SWPPP) must be prepared in accordance with all applicable requirements of GP-0-25-001 and a completed Notice of Intent (NOI) form must be submitted to the Department.

An owner or operator of a construction activity that is subject to the requirements of a regulated, traditional land use control MS4 must first prepare a SWPPP in accordance with all applicable requirements of GP-0-25-001 and then have its SWPPP reviewed and accepted by the regulated, traditional land use control MS4 prior to submitting the NOI to the Department. The owner or operator must then submit the signed “MS4 SWPPP Acceptance” form along with a completed NOI to the Department. For additional information on the Department’s stormwater program please visit the following webpage: https://dec.ny.gov/environmental-protection/water/water-quality/stormwater/construction-activity-permit

State Pollution Discharge Elimination System (SPDES)

The Department's understanding is that all sanitary wastewater discharges from this project will be handled by STAMP Sewer Works and conveyed via pipeline to the Village of Oakfield wastewater treatment plant (WWTP), and that there will be no industrial wastewater discharges from the project. As such, no individual SPDES permit will be required for the Project Double Reed project.

However, any direct discharges from the project to surface or groundwater will be subject to SPDES permitting. In addition, any proposed industrial discharges to the Village of Oakfield WWTP would require a modification of their SPDES permit.

The Department also notes that it would be atypical for 120 employees to use 20,000 gallons of water per day and to create 20,000 gallons of sanitary wastewater per day. If wastewater is generated from cooling, air conditioning, or similar purposes, this constitutes an industrial discharge. As noted above, this requires a modification to the Village of Oakfield SPDES permit.

Air

Air permitting requirements are found in 6 NYCRR Part 201 and on our website at https://www.dec.ny.gov/chemical/8569.html.

The proposed project includes twelve diesel-fired emergency engines that would be certified to meet EPA Tier 2 emissions standards. To minimize air emissions from the proposed project, DEC recommends the applicant evaluate the use of generators certified to EPA Tier 4f emissions standards as an alternative to the currently proposed generators.

Without additional information, the Department is unable to confirm whether Project Double Reed would require an air facility registration or an air state facility permit.

As part of DEC's review for air permits, the Climate Leadership and Community Protection Act (CLCPA), which became effective January 1, 2020, directs state agencies to determine if the decisions they make are consistent with the attainment of the statewide greenhouse gas (GHG) emissions reductions established in ECL Article 75. In the case of the DEC, this includes determining if permits issued are consistent with or would interfere with the attainment of the established statewide GHG emissions levels. Depending on the additional information received for potential air permitting purposes, the applicant may need to prepare a CLCPA analysis as discussed in the Department's DAR-21 guidance.

Bulk Storage of Petroleum/Chemicals

The storage of certain chemicals, petroleum products and/or hazardous materials for 180 days or more will require registration and compliance with the Petroleum Bulk

Storage Program (6 NYCRR section 613-1.3(as)). For more information, visit https://dec.ny.gov/environmental-protection/hazardous-substance-bulk-storage/forms-instructions.

Historic, Architectural, Archeological, and Cultural Resources

The FEAF indicated that Phase 1 through 3 archaeological survey and data recovery work has been completed for the proposed project site and adjacent areas. Initial Assessments as required by the LOR must be reviewed by the DEC prior to consulting with the New York State Office of Parks, Recreation and Historic Preservation (OPRHP) to receive an effect letter for the proposed project. DEC strongly recommends that the lead agency or applicant receive an effect letter prior to GCEDC making a SEQR determination for the Project Double Reed project.

OPRHP and DEC will continue consultation with Tonawanda Seneca Nation (TSN) regarding cultural resources, environmental impacts, and environmental justice per the March 23, 2021, Letter of Resolution (LOR), in accordance with CP-29 and CP-42 (see Stipulation 3: Consultation and Environmental Justice) and June 28, 2024, Interim Initial Assessment Expectations. If the proposed project requires an individual permit from the Corps, the Corps will implement the Programmatic Agreement.

Even when all appropriate archaeological surveys have been completed for a project site, unanticipated discoveries of cultural resources or human remains can occur during construction. DEC recommends creating an Unanticipated Discovery Plan to establish a clear process to follow in the event of an unanticipated discovery during construction. In addition, DEC requests that TSN be given the opportunity to have monitors on site during ground-disturbing construction activities or excavation. TSN and DEC should be notified 2 weeks in advance to provide time for adequate preparation and coordination.

Submittal and review timeframes should exclude all federal holidays, as well as TSN ceremonies that fall within the review period.

In accordance with the LOR, the applicant must prepare an Initial Assessment (IA) of each element of the STAMP project to evaluate whether or not it will have an adverse impact to the Tonawanda Seneca Nation's Territory as a property of religious and cultural significance. The IA must contain sufficient information and justification to help guide the Department's and OPRHP's evaluation of potential adverse impacts.

Environmental Justice and Disadvantaged Communities

The STAMP site is located adjacent to the TSN territory, which is designated as a potential environmental justice area (PEJA), and is subject to the Commissioner's Policy regarding Environmental Justice and Permitting (CP-29). Permitting for certain Major projects, as defined in the Policy, must be in compliance with CP-29 and may require additional outreach to impacted communities. Additionally, depending on what permits are needed, the requirements of the Environmental Justice Siting Law may also apply.

In addition to the project being adjacent to an Environmental Justice area, it is also in a Disadvantaged Community, as designated by the Climate Justice Working Group (CJWG), which subjects this project to review under the CLCPA. Per Section 7(3) of the CLCPA, in considering and issuing permits, license, and other administrative approvals and decisions, all state agencies, offices, authorities, and divisions shall not disproportionately burden Disadvantaged Communities. Additionally, state agencies, offices, authorities, and divisions shall prioritize reductions of greenhouse gas emissions and co-pollutants in Disadvantaged Communities. DEC Program Policy DEP 24-1 outlines the process for permit applications associated with sources and activities in or likely to affect a DAC. If the project involves certain activities or requires any of the permit types listed in the Policy, DEP 24-1 may apply.

Invasive Species Recommendations

To minimize the spread of invasive species during construction, consider the following best management practices (BMPs):

- Clean all construction equipment of mud, seeds, vegetation, and other debris as you move from one area to another.
- Excavate topsoil separately from subsoil for appropriate backfilling.
- Return all ground disturbance to pre-construction conditions and stabilize disturbed areas with seeding and mulch as soon as possible.

Please be advised that the project is still subject to any other necessary federal, state, or local permits and approvals. In the case that the project scope or location changes, please contact us so that we may reevaluate this determination. State regulations applicable to the location subject to this determination are occasionally revised and you should verify the need for permits if the project is delayed or postponed. This determination regarding the need for permits is effective as of the date hereof.

AI Data Centers: Big Tech's Impact on Electric Bills, Water, and More

Massive data centers are gobbling up resources across the U.S.—and you may be paying for it

Hyperscale data centers like the QTS Data Center in Fayetteville, Ga. (shown above), are being built across the U.S.

March 20, 2026

John Steinbach was shocked to receive a $281 electricity bill in January 2026—a huge spike from the roughly $100 he'd paid the previous month. "It's just so far beyond any bill that I've ever had," he says. Steinbach, who has lived in his Manassas, Va., home for nearly 40 years, worries his rates will keep climbing as the outsized electricity demand from AI data centers grows. "They're building them like it's 'Field of Dreams'—build it and the electricity will come—but we don't see how that's going to happen."

The contribution of AI data centers to higher bills is just one of the ways the development boom is affecting consumers. The facilities also compete for critical resources like water and land, and they can lower air quality and increase traffic, often while benefiting from changes to zoning laws and huge tax breaks.

Data centers are not new. Such buildings have been around for decades, housing the servers and other hardware needed to power the internet. But since the introduction of ChatGPT to the public in late 2022, generative artificial intelligence has exploded, requiring mountains of new, power-hungry equipment.

To meet this ballooning demand, and in a race to drive AI's growth, tech giants like Amazon, Google, Meta, and Microsoft have been investing billions to build immense new facilities packed with servers and other equipment. Known as hyperscale data centers, they are far bigger than earlier versions, and are often built in sprawling industrial parks.

Meta alone has dozens of these mega facilities in various stages of development, including its Hyperion campus in rural Louisiana. Originally planned for 2,250 acres, the site recently expanded to 3,650 acres, according to reporting by Fortune—the size of 2,765 football fields, and twice as big as the state's international airport.

This buildout is happening all across the country. While the size of the facilities is startling, their energy use is even more dramatic. A January 2026 report by Bloom Energy, an on-site energy company, predicts that U.S. data centers' total combined energy demand—how much electricity they may use when up and running—will nearly double between 2025 and 2028, jumping from 80 to 150 gigawatts (GW). That's like adding a country with the energy needs of Spain in just three years.

The companies leading the AI data center boom say their developments can generate economic growth and jobs, and a number of tech executives recently signed on to a White House-sponsored pledge aimed at limiting their effect on residential electric bills.

However, many local residents and consumer advocates see mainly downsides to the expansion of data centers.

"People are starting to be really, really aware that these projects tend to be very extractive and bring very little to local communities," says Kasia Tarczynska, senior research analyst for Good Jobs First, a watchdog group focused on government and corporate accountability in economic development. "And that's where there's a huge pushback across the country."

Consumer Reports is urging the industry to back up its pledges with detailed contracts and progress reports that can be monitored by the public, says Chris Harto, CR's manager for sustainability advocacy. "This is ultimately about trust. Companies need to show—clearly and verifiably—that they're paying their own way, not driving up everyone else's electricity bills or harming the environment."

As new, and ever-larger, AI data centers continue to spring up, here's what everyone should understand about their impacts—and a growing backlash.

Electricity Bills Are Rising

It's no secret that electricity costs across the U.S. are skyrocketing.

Residential prices jumped 7.1 percent in 2025–more than double the inflation rate–and topped 20 percent in some states, according to federal data. The AI data center rush isn't the only factor driving up prices–others include inflation and an aging power grid–but it's a significant one.

That's because hyperscale data centers demand a nearly unimaginable amount of energy. The International Energy Agency says a typical hyperscale data center might use 100 megawatts (MW), as much electricity as 100,000 households.

And that's at the low end. Meta's Hyperion project in Louisiana, for instance, will need at least 5 GW to run. That's three times as much electricity as the entire city of New Orleans, according to the Institute on Taxation and Economic Policy.

Data Centers Use Vast Amounts of Energy

Power demand, all U.S. data centers

Sign In Join Now

Home & Garden Try AskCR

By 2028, data centers could use 12 percent of all the electricity consumed in the U.S., according to the Lawrence Berkeley National Laboratory, and that percentage will grow. More regions could start to look like Virginia, already home to nearly 600 facilities with more than 100 more proposed or under construction. According to a Bloomberg News analysis, data centers accounted for almost 40 percent of the state's total consumption in 2024.

More data centers can mean higher costs. That same Bloomberg analysis found that areas with high concentrations of data centers saw electricity prices jump 267 percent over the past five years. And John Steinbach isn't the only Virginia resident to see a connection: Nearly three-quarters of voters in the state blame the facilities, largely clustered in Northern Virginia's Data Center Alley, for rising electricity costs, according to a January 2026 survey conducted by Global Strategy Group and the Chesapeake Climate Action Network Action Fund.

The worry extends beyond Virginia, too. A November 2025 nationally representative survey (PDF) of 2,146 U.S. adults by Consumer Reports found that 78 percent of Americans are somewhat or very concerned that the new data centers being built across the country will make their energy bills go up.

To keep up with the growing demand for power, electric utilities are spending billions to build new transmission lines and power plants. That's one of the main ways new data centers can drive up home electricity bills, says Ari Peskoe, director of Harvard Law School's Electricity Law Initiative and co-author of a March 2025 paper exploring how the public is funding Big Tech's power-intensive facilities. "Utilities are building infrastructure, and then we all pay for it because that's how the utility business model has always worked," he says.

Residential electricity costs are also rising because the rush of new hyperscale data centers wanting to draw power from the grid is spiking demand. That drives up prices for everyone, Peskoe says.

Are Data Centers Driving Up Your Electric Bills?

Share your story with us.

Water Demand Is Soaring

Large data centers' rows upon rows of stacked servers and other hardware operate around the clock to power intensive computing tasks like generative AI and cryptocurrency mining–and they run hot. To prevent the machines from overheating, the facilities have historically relied on constantly circulating water to cool their equipment.

In the process, a data center can use up to 5 million gallons of water every day, as much as 16,000-plus average U.S. households, according to Environmental Protection Agency estimates. That's just direct usage for cooling. Generating the electricity to keep data centers powered up requires additional millions of gallons of water, even more than the water used for cooling.

Direct Water Use by Phoenix-Area Data Centers

ate the electricity they need to operate.
gure will grow as more data centers are

eres.

= 1 million gallons

385M

gallons per year (current)

What's more, about two-thirds of the data centers built since 2022 are in areas already experiencing water stress, according to a Bloomberg News investigation. That includes parts of Texas. The state is already home to roughly 400 data centers, according to Data Center Map, an industry research company, and it is now contending with the introduction of massive campuses. One planned site, called Project Matador, will house 18 million square feet of data centers—plus four nuclear reactors and a natural gas power plant. The developer, Fermi America, plans to use hybrid air/water cooling systems and says it is investigating the use of recycled water to conserve resources. However, experts at the Houston Advanced Research Center and the University of Houston believe the increased water demand from this project and the dozens of others popping up across Texas will strain supplies in coming years.

In Arizona, another water-stressed state, companies have built, or announced plans to build, 26 data centers since 2022. An analysis by Ceres, a nonprofit advocacy group, found that data centers around Phoenix already use approximately 385 million gallons of water per year for direct cooling needs. And it predicts that amount will skyrocket to 3.7 billion gallons per year once the region's planned data centers come online. That's an 870 percent increase—and it's nearly twice the water needed to supply a city the size of Flagstaff.

Local Impacts Can Be Overwhelming

Hyperscale data center facilities take years to build, and the construction phase can take a toll on community members' daily lives.

In some areas, electric utilities are crossing through people's properties with the new transmission lines needed to supply energy to data centers—with some homeowners even finding massive high-voltage poles going up in the middle of their lawns, just yards from their houses. Homeowners in Georgia have also complained of contaminated well water, damaged roofs, and other problems they blame on nearby data center construction.

They worry about increased traffic, too. Diana Dietz, who lives several miles from a data center campus being developed by QTS in Fayetteville, Ga., says large vehicles are now rumbling through previously quiet areas. "You've got these giant excavation-style dump trucks 2 minutes from my house, nipping by," she says. "You've got those vehicles, you've got huge flatbeds bringing in equipment, you've got huge cement trucks, you've got construction vehicles—all speeding on these residential roads."

Residents face similar problems in other regions, too. Vehicular accidents in the rural area where Meta is building its Hyperion campus jumped by more than 600 percent in the first nine months of 2025 over the previous year, according to an analysis of police records published in November 2025 by Louisiana Illuminator, a local news outlet.

In an emailed statement, a Meta spokesperson says the company is working to "mitigate impacts to the community" by building new roads to divert truck traffic, conducting a traffic study, and collaborating with contractors and the local police department. The statement also says that the company is "proud to call Richland Parish home" and that "being good neighbors is a top priority."

A new QTS data center being developed in Fayetteville, Ga., is drawing complaints from nearby residents.
PHOTO: ELIJAH NOUVELAGE/GETTY IMAGES

Once data centers come online, they can also affect local air quality. Because the equipment inside data centers operates day and night, operators often install fossil-fuel generators that can provide power in the event of a shortage or an outage. In late January, with the threat of bitter cold temperatures and impending winter storms in many parts of the U.S., the Department of Energy gave a preemptive green light to data centers and other "major facilities" to run their generators as needed.

Generators powered by diesel and natural gas can be noisy and emit harmful pollutants that have been linked to cancer, heart disease, and respiratory problems. And because many data centers are built close to homes and schools, these emissions can put nearby residents and children at particular risk. According to a recent Kapor Foundation report, 82 percent of California data centers are located in communities already facing poor air quality.

As AI data center construction outpaces the facilities' ability to connect to the grid in many areas, some are opting to rely entirely on their own generators. Portable methane gas turbines, for example, power Elon Musk's xAI Colossus 1 and 2 facilities in Memphis, Tenn., affecting communities already overburdened by pollution. (The company did not respond to CR's requests for comment.)

This "behind the meter" development strategy is increasingly common: Forty-six planned data centers, with a combined capacity of 56 GW, will avoid connecting to the grid altogether, according to an analysis by Cleanview, an energy data company. Companies that build and operate data centers say that generating power on-site can reduce strain on the grid during peak times, and potentially keep consumer electricity bills in check.

Some of this new power could be supplied by cleaner sources. But for now it will overwhelmingly be generated using fossil fuels.

Data Center Deals Are Often Secret

When a company wants to build a data center in a community, its residents are frequently kept unaware about what's coming until the project is a done deal. Researchers at the University of Mary Washington identified 31 Virginia communities with existing, approved, or proposed data centers and found that the vast majority—25 of the 31—had nondisclosure agreements with local officials. These NDAs often kept the public from learning that a facility was even being proposed, let alone its size or impact

on local infrastructure like water and sewage systems.

Data center developers say they need to keep details hidden from other companies while developing their plans. “As is the case with other highly competitive industries, data center companies may use NDAs when considering projects to protect company-specific, competitive information,” Dan Diorio, vice president of state policy for the trade group Data Center Coalition, said in an emailed statement. In fact, he said, “the protections provided by NDAs may result in an increase in the amount and detail of information” shared with local officials about planned water and power usage.

However, consumer advocates say the practice leaves residents in the dark about looming construction projects that will have long-lasting community impacts. “It’s a very mysterious, don’t-look-behind-the-curtain process—and I think that is what is angering people the most,” says Amy Sharma, executive director of the nonprofit Science for Georgia.

Tim Cywinski, communications director for the Sierra Club’s Virginia chapter, agrees: “It’s not a radical thing to say communities deserve to know if their neighbors are making them sick or driving up their electric bills.”

At the state level, the same lack of transparency extends to economic subsidies for data centers. Many states refuse to disclose how much they are giving out, or to which companies, according to Tarczynska, the senior research analyst from Good Jobs First. When the tax breaks are made public, they are often substantial: Virginia and Texas each provide about $1 billion per year in data center exemptions, according to the organization. Tarczynska says that data centers are “one of the most subsidized industries we have ever seen” in the group’s 27-year history.

Companies have funded community programs and promised the projects will create jobs, but experts say the trade-offs are rarely worthwhile. While data centers bring short-term construction work, they may provide relatively few permanent jobs once they’re complete. One study, by nonprofit Food & Water Watch, estimated that by the end of 2024, as few as 23,000 people in the U.S. worked in the data center industry. And in November 2025, two business school professors published research finding “no clear evidence that data centers stimulate local growth in tech employment.”

Opposition Is Growing

Federal agencies haven't done much to regulate the growth of data centers. In fact, an executive order from President Donald Trump last summer streamlined environmental reviews and other regulations in an effort to hasten the buildout.

But individual communities have started vocally pushing back against many projects—with increasing success. Research firm Data Center Watch found that between March and June 2025, community opposition led to $98 billion in data center projects being blocked or delayed. And a Heatmap Pro review of public records from January 2026 revealed that at least 25 projects were canceled last year in response to local objections.

Demonstrators in Memphis, Tenn., opposed plans by Elon Musk's xAI to use gas turbines to power a data center.
PHOTO: BRANDON DILL/GETTY IMAGES

After months of intense opposition from Indianapolis residents, for instance, an attorney representing Google announced at a September 2025 city-county council meeting that the company was pulling its rezoning proposal for a $1 billion data center project planned for the southeast side of the city. The room, filled with people holding signs, erupted in cheers. "For a long time, it felt like we were four people with cardboard swords fighting a monster," one resident told More Perfect Union after the meeting. "But tonight it shows that people power still rings."

Last fall, political candidates in a number of gubernatorial and other state races pledged to take on data centers and rising electric rates, including in hotspots like Virginia and Georgia. Meanwhile, more than 230 environmental organizations collectively called on members of Congress to place a national moratorium on new data centers until, they wrote, "adequate regulations can be enacted to fully protect our communities, our families, our environment and our health from the runaway damage this industry is already inflicting."

States such as New York and Maryland have begun to introduce their own legislation that would temporarily halt new data center construction. "It's time to hit the pause button, give ourselves some breathing room to adopt strong policies on data centers, and avoid getting caught in a bubble that will burst and leave New York utility customers footing a huge bill," the New York bill's co-author, Sen. Liz Kruger, said in a statement.

More broadly, in 2026 so far, lawmakers in more than 30 states have introduced over 300 bills on issues related to data centers, including moratoriums, tax incentives, and energy policy, according to Multistate.

Tech companies aren't slowing their planning for new data centers—quite the opposite—but some have begun promising to address consumers' concerns.

In mid-January, Microsoft outlined a broad plan, pledging to cover its own electricity costs, reduce water use, create local jobs, and avoid seeking tax breaks. Anthropic, the company behind Claude AI, made its own promise to cover electricity price increases related to its data center development. And in early March executives from those companies and additional tech firms traveled to the White House to sign a nonbinding "ratepayer protection pledge." Among other measures, companies agreed to "build, bring, or buy" the power needed for their data centers and to pay for upgrades to electric grid infrastructure related to their facilities.

Harvard's Peskoe says the pledge "does nothing to help consumers," since neither the president nor tech companies control who pays for expansions of electrical grids. "Utilities hold the pen on these issues, and utility regulators make the final decisions," he says.

In statements emailed to CR, tech companies defended the plan. A statement by Brad Smith, president of Microsoft, said, "We appreciate the administration's work to ensure that data centers don't contribute to higher electricity prices for consumers." Anthropic directed us to a tweet by Sarah Heck, the company's head of public policy that read, in part, "In support of the @WhiteHouse rate payer protection pledge, Anthropic has committed to covering 100 percent of electricity price increases that consumers face

from our data centers."

But consumer advocates are waiting for the details. "Making a commitment is one thing," says Evan Feeney, CR's associate director of corporate engagement. "Following through is another."

This work is made possible, in part, by a grant from the U.S. Energy Foundation. CR's work on energy affordability is also made possible by the vision and support of the William and Flora Hewlett Foundation.

Trending in Data Centers

EXHIBIT 3

Data Center Comparison Memorandum to the GCEDC Board

The GCEDC Board is currently considering three data center projects (Project Hydroscale; Project Rampart; Project Double Reed) who have submitted applications to locate on the same property at the STAMP Site located west of Crosby Road, just south of the substation access road in the Town of Alabama, Genesee County, New York. These projects are mutually exclusive, as they essentially seek the same basic location on the STAMP Site. This memo will be a summary of each of the three proposed projects as well as the results of the detailed application reviews and additional due diligence and analysis that has been completed by GCEDC Staff and the STAMP Tech Team; along with a final Staff recommendation.

EXECUTIVE SUMMARY

- Based on the information submitted by each of the three applicants, Staff recommends the approval of Project Double Reed for the reasons enumerated below. Please note that this is merely a summary of our findings. Additional details and back-up documentation can be found in the packet of materials to which this Executive Summary is attached.
- In Staff's view:

    - The environmental impact of these projects has been carefully considered by GCEDC Staff and Tech Team. Of the three projects under consideration, Project Double Reed has demonstrated that it will have by far the lowest level of air emissions, thereby having the smallest impact on air quality.

    - Each of the proposed projects will require the installation of back-up generators that are powered by diesel fuel. On-site diesel fuel storage will be limited to approximately 60,000 gallons for Project Double Reed, whereas diesel storage at the other projects would be more than ten times that level – 700,000 gallons for Project Hydroscale and 1.5 million gallons for Project Rampart. Minimizing on-site diesel fuel storage is directly

responsive to the public comments received expressing concerns regarding spill concerns and fire safety.

- Project Double Reed's facilities will have the lowest sound emission levels of the three projects, without the need for a mitigation buffer. It should be noted that while initial noise level estimates provided by Project Rampart were similar to those of Project Double Reed, subsequent updates have shown that both Rampart and Hydroscale's noise levels would exceed the STAMP GEIS thresholds and therefore, would require further study before any approvals could be issued.

- Landscaping proposals for Project Double Reed include vegetative screening that will help shield the building from view. The other two projects would be fully or partially visible when viewed from adjacent properties.

- Project Double Reed has demonstrated that it has the experience and financial capabilities to execute, develop, and deliver its project in a timely manner. It is backed by a proven developer with an impressive client base and a multitude of similar projects under its belt. In addition, Project Double Reed is the only project that has a soft commitment from a Fortune 500 company to utilize 100% of the data center capacity.

- Project Double Reed will pay over $7,000,000 in sales tax and property taxes which will be allocated to Genesee County, the Town of Alabama, and its school district on an annual basis, subject to an escalator that will result in approximately $10,000,000 being paid on an annual basis at the end of the PILOT for the project. It is anticipated that this revenue will have a critical impact on the County's ability to undertake vital updates to our infrastructure, thereby improving the health and welfare of all members of our community. In addition, Project Double Reed will pay $50,000,000 (at a rate of $200,000 per MW) to finance construction of the STAMP Substation and to reimburse GCEDC for costs associated with prior investment made to the same, while also paying GCEDC $18,000,000 for the 60 acres it will purchase for the Project.

- Although Project Rampart proposes the highest PILOT/Host Agreement payments of the three projects, our community members made it clear during the public hearings held for these projects that money is not and should not be the only factor taken into consideration during this process.

Our directive is to determine which project, if any, is the best fit for Genesee County. Based upon the information provided to us by the three applicants, Project Double Reed will have the smallest environmental impact and will best address concerns voiced by the Nation with respect to visual and noise impacts, all while providing local benefits totaling over $1,000,000,000 over the life of the PILOT. For these reasons, as more thoroughly discussed in the following pages, we recommend that the GCEDC Board approve Project Double Reed.

I. PROJECT REVIEW HISTORY

GCEDC has undertaken an intensive, months' long review of all three competing applications. A detailed summary of the Project Review History is attached as **Exhibit A**. As detailed therein, following receipt of multiple applications for competing projects, GCEDC established a process for obtaining final design and information and a final and best offer from all three applicants. Specifically, the process included:

- One-on-one meetings with each applicant and the STAMP Tech Team to answer any applicant questions regarding the process, deliverables relating to final design packages, and related items.
- One-one-one meetings with the STAMP Committee to afford applicants the opportunity to discuss their best and final financial offers.
- Clear written correspondence at each step in the process.

After discussions with each of the Applicants, the process was summarized in a December 11, 2024 letter to all applicants. No applicant objected to GCEDC's process as set forth in the December 11 letter.

Following review of all three projects, GCEDC staff has prepared detailed summaries of the projects (including incentives requested and design details), attached hereto as **Exhibit B**.

II. CRITERIA FOR EVALUATION AND ANALYSIS

The GCEDC Staff has reviewed all of the documentation provided from each of the data center applicants. In connection with the request to purchase land at the STAMP Site, all applicants were advised that the GCEDC would consider factors including (but not limited to): (i) the creation of good paying jobs in the local community; (ii) the amount of land proposed to be consumed by the data center and its potential impact on the overall build out of STAMP; (iii) demand for resources (water, sewer, electricity) and the impact of such demands on the overall build out of STAMP; and (iv) impacts to the environment including but not limited to impacts to natural resources on the STAMP site (wetlands,

streams, etc.) and any potential impacts to the Territory of the Tonawanda Seneca Nation ("**Nation**") lands adjacent to the STAMP Site as a Traditional Cultural Property.

In addition, GCEDC Staff has reviewed the GCEDC's Uniform Tax Exemption Policy ("**UTEP**") in evaluating the various requests for financial assistance associated with the projects as well as the financial benefits to the community which would be created in return for such financial assistance.

III. STAFF ANALYSIS OF CRITERIA

GCEDC Staff has reviewed the above-referenced criteria and a summary of the relevant areas of consideration is provided below.

a. Environmental and Technical Considerations

As detailed in the attached memorandum prepared by the STAMP Technical Team, Project Double Reed is the least environmentally impactful project and is the most consistent with the analysis, thresholds and conditions set out in the STAMP Generic Environmental Impact Statement ("**GEIS**"). A summary of relevant environmental considertions associated with each data center project is provided below.

- Air Impacts.
    - Project Rampart and Project Hydroscale will require 120 and 200 backup generators, respectively; whereas Project Double Reed will require only 6. Because of this, Both Project Rampart and Hydroscale will require storage and use of several hundred thousand gallons more of diesel fuel on site more than Double Reed.
    - Both Project Rampart and Project Hydroscale have potential air emissions in excess of the threshold requiring Title V air permit due to the large number of backup generators; whereas Double Reed could qualify for the lesser Air Facility registration due to its significantly lower potential to emit and estimated actual emissions. While it is possible that all three projects could ultimately require a State Facility Permit, Project Double Reed's projected actual emissions (as well as Double Reed's potential to emit) are an order of magnitude lower than the competing projects. In light of the New York State Department of Environmental Conservation's obligation to comply with the Climate Leadership and Community Protection Act ("**CLCPA**") (and other applicable laws), Project Double Reed's application is far more likely to be processed (and ultimately approved) in a timely fashion.
    - Critically, both Rampart and Hydroscale are well in excess of the contemplated actual annual air emissions for a single STAMP facility under the GEIS; whereas Double Reed is well under the same. Furthermore, Project Double Reed will emit substantially less CO2 than competing projects.

- Noise Impacts
    - Project Rampart and Project Hydroscale both propose projects with noise emissions in excess of the GEIS thresholds, whereas Project Double Reed has proposed a project consistent with the GEIS.

- Visual Impacts
    - All three projects enjoy substantial setbacks from a majority of the surrounding uses, but Project Double Reed's height is similar to Project Rampart's lower height while also being located approximately 800' further away from the Nation's eastern boundary adjacent to the site. Double Reed has also proposed a conceptual landscape plan with vegetative screening to further shield it from view.

- Energy Demand
    - All three Project demand energy within the capacity of the STAMP substation, with Hydroscale demanding the least at 195 MW, and Double Reed demanding the most at 250 MW.

b. Financial Considerations

In evaluating the GCEDC's UTEP as well as other relevant financial considerations, GCEDC Staff has determined that Project Double Reed most successfully achieves the goals of the UTEP while also presenting a credible application. A detailed analysis follows.

i. Credibility

In evaluating the information contained in the applications, GCEDC Staff believes that Project Double Reed's application is the most likely to deliver on its proposed project at the STAMP Site. This conclusion is drawn based upon GCEDC Staff's review of the application materials, interaction with each of the applicants, the conduct and content of the interviews held with the applicants, GCEDC Staff's knowledge and experience reviewing applications (including applications relating to data centers), and input from STAMP stakeholders. Specifically:

- Project Double Reed is the most likely to bring its project to fruition because it is the only project that has a commitment, albeit a soft one, from a tenant which, in Double Reed's case, is a Fortune 50 company with over $100,000,000,000 in revenue and will utilize 100% of the project space. By contrast, no other project appears close to securing a tenant for total occupancy of the project.
- Project Double Reed's costs estimates and employment and wage information appear to be the most accurate since Double Reed has a soft commitment from

a specific tenant and is fully familiar with that tenant's technical specifications and requirements. In turn, this allows Double Reed to base its estimates upon actual operations rather than generalized assumptions. By contrast, no other project appears close to securing a tenant for total occupancy of the project and, as a result, their cost estimates and employment and wage information are based on industry averages which may or may not be relevant to their final tenant or tenants.

- As no project can proceed with construction until an Air Permit has been issued by the New York State Department of Environmental Conservation ("NYSDEC"), the Air Permitting process is a gating item for all three projects. As detailed above, Project Double Reed, because of the minimal amount of backup generators, will be the most straightforward of all of the data center projects from an air permitting perspective and therefore, Staff believes, is the most likely to receive a timely Air Permit from NYSDEC, and may in fact qualify for the less time-intensive Air Facility Registration. In light of the significant regulatory processes associated with Rampart or Hydroscale's air emissions, Staff finds that it is not likely that those projects would be completed in a timely manner.
- GCEDC will need to have a productive working relationship with any company seeking to locate at the STAMP Site, and is not looking to partner with a company that is essentially speculating on land that may flip either the land or the ownership of the company to a third-party unknown to GCEDC. While Project Double Reed has confirmed its client/tenant relationship and its intention to own the property for the life of the PILOT, Project Rampart appears to neither own nor control any datacenters, with the parties representing Project Rampart having flipped entitlements received for other datacenters to unrelated third-parties and having confirmed that entitlements received at STAMP would be flipped if conditions were favorable.
- Project Double Reed has proceeded in good faith throughout the application review process without resort to threats of litigation or other bad behavior to try to manipulate review of the application. By contrast, Project Rampart's actions throughout the application review process have indicated that Project Rampart would be unable to have a productive relationship with GCEDC and other STAMP stakeholders. While Project Hydroscale has proceeded in good faith throughout the application process, the information provided by Project Hydroscale (particularly with respect to financial incentive requests) has repeatedly been modified, including well-after GCEDC's cutoff date for "best and final offers" from the companies.

ii. GCEDC UTEP

The GCEDC UTEP fully supports the grant of financial assistance to Project Double Reed. The qualitative UTEP factors, along with explanations of the applicability of each factor to the projects, are detailed below.

- The Project pledges to create and/or retain quality, good paying jobs in Genesee County.
    - Project Hydroscale is pledging the highest employment and payroll at 200 jobs at an average salary of $142,000 (annual payroll of approximately $28.4 million); with Double Reed pledging the second highest at 122 jobs at an average salary of $89,000 (annual payroll of approximately $10.86 million); and Rampart pledging the least at 105 jobs at an average salary of $64,095 (annual payroll of approximately $6.73 Million).

- Completion of the Project will enhance the long term tax base and/or make a significant capital investment.
    - Project Double Reed is pledging the highest capital investment at $6.3 billion, with Hydroscale at $5.4 billion, and Rampart at $3.3 billion.

- The Project will contribute towards creating a “liveable community” by providing a valuable product or service that is underserved in Genesee County.
    - While this criteria relates primarily to the product or service provided by an applicant (and therefore is broadly identical for all three projects), as noted above, Project Double Reed’s environmental impacts are significantly less than those proposed by Project Rampart and Project Hydroscale. Accordingly, Project Double Reed would contribute most towards “creating a ‘liveable community’” in accordance with this standard.

- The Board will review the Agency’s Fiscal and Economic Impact analysis of the Project to determine if the Project will have a meaningful and positive impact on Genesee County. This calculation will include the estimated value of any tax exemptions to be provided along with the estimated additional sources of revenue for municipalities and school districts that the proposed project may provide.
    - As detailed in the Fiscal and Economic Impact analysis prepared for each project, project Double Reed is projected to have a meaningful and positive impact on Genesee County.
    - Project Rampart is offering the highest land purchase price at $350,000 per acre, totaling $23.45 million for 67 acres; with Project Double Reed and Project Hydroscale both providing the next highest price at $300,000 per acre (Project Double Reed requesting 60 acres, totaling $18 million; and Project Hydroscale requesting 43 acres, totaling $12.9 million). We

note that Project Rampart has offered to sell acreage back to GCEDC at cost if such acreage is not needed for their project. While GCEDC is under no obligation to buy back acreage, this caveat does suggest that the project itself is subject to future uncertainty with respect to design.
- Project Rampart proposes the highest PILOT/Host Agreement payments at $135 million; with Double Reed at $128 million; and Hydroscale pledging the least at $76 million. We note that, following the deadline for companies to submit their "best and final offers" with respect to their projects, Project Hydroscale has since clarified that it would match the most competitive application. While this offer comes after the deadline, Staff acknowledges the same, however, this change does not impact Staff's conclusion regarding the overall analysis of the various projects.
- In addition, as detailed in the attached memorandum addressing electrical infrastructure, the financial contributions by Project Double Reed analyzed in the Fiscal and Economic Impact Analysis that will be made to the electrical grid will contribute to the State's renewable energy goals and emission reduction targets as set forth in the State energy plan.

- The Project is included in one of the Agency's strategic industries: Agri-Business and Food Processing, Manufacturing, Advanced Manufacturing and Nano-Enabled Manufacturing, Life Sciences and Medical Device.
    - All three projects fall within the Agency's targeted businesses for the STAMP Site (Technology Manufacturing). This use was specifically identified in the GEIS prepared for the development of STAMP as well as the incentive zoning agreement negotiated with the Town of Alabama.

- The Project will give a reasonable estimated timeline for the completion of their proposed project.
    - As detailed above, Project Double Reed's estimated timeframe for completion of the proposed project is the most reasonable in light of several factors: (1) ability to secure a tenant in a timely fashion; (2) ability to obtain necessary permits and approvals in a timely fashion; (3) ability to construct a project consistent with tenant requirements in light of existing tenant relationship.

iii. Additional Considerations

In addition, Staff offers the following with respect to Project Double Reed.

- The Project will have a positive impact on existing and proposed businesses and economic development projects in the vicinity.

- Project Double Reed will play a critical role as a tenant of the STAMP Site in supporting the overall goals of the development of STAMP and the positive impacts that will result for existing businesses and other economic development projects. Further, the financial benefits to the community will be utilized to fund infrastructure improvements throughout the County which will benefit economic development projects (both existing and future) as well as the community at large.

- The taxing jurisdictions will be reimbursed by the project occupant if a project does not fulfill the purposes for which an exemption was provided.
  - GCEDC will enter into binding agreements with the company prior to the issuance of any incentives which will include appropriate claw back mechanisms as required by law.

- The STAMP Project has received public support from the community and Project Double Reed helps to achieve the goals of STAMP.
  - As detailed in the public surveys completed for the STAMP project during the incentive zoning process completed by the Town of Alabama, the local community broadly supports the development of STAMP. While many public commenters at the February 3 public hearing expressed strong opposition to such development and to Project Double Reed (as has the Nation), it should be noted that the vast majority of such commenters are residents neither of the Town of Alabama nor Genesee County. Further, the comments primarily focused upon environmental concerns which have been addressed in detail in the attached Tech Team Memo, as well as the public response summary included therein.

- Project Double Reed's environmental impact has been carefully analyzed.
  - As detailed in the attached Tech Team Memo, and as explained in more detail elsewhere herein, the impacts from Project Double Reed fall well within the parameters and thresholds set forth in the GEIS completed for the development of STAMP.

- The Project will utilize, to the fullest extent practicable and economically feasible, resource conservation, energy efficiency, green technologies and alternative and renewable energy measures.
  - Project Double Reed's proposed design shows a demonstrated commitment to reducing reliance on fossil fuels through the minimization of fossil fuel backup power resources. Further, the Project will draw power from the STAMP substation, which itself is interconnected to the Western

New York power grid, primarily drawing hydropower rather than non-renewable sources.

- The Project will not provide onsite child daycare facilities, however, contributions from the Project may facilitate such services in the Town.
    - While the Project does not propose to provide for onsite child daycare facilities, it should be noted that this is typical for the Data Center industry. Such uses do not typically generate a high demand for such services, and it is not anticipated that Project Double Reed will generate such a demand. Notwithstanding the lack of onsite child care services, the significant financial benefits associated with the Project will allow the Town and County to consider funding such services should they become needed in the future.

- The proposed project will not unduly strain existing services, including, but not limited to additional educational, transportation, police, EMS or fire services.
    - As detailed in the Tech Team Memo, Project Double Reed will adequately serviced by the existing services present in the Town and County. Project Double Reed will be constructed in full compliance with the latest building code standards. Further, the development of STAMP as a whole results in significant payments to the Town and County which enable further spending to support existing services in the Town.

IV. STAFF CONCLUSION

In summation, from Staff's perspective, of the three proposals, Project Double Reed satisfies the goals of STAMP to the greatest extent based on the following:

Environmental

- Because it will have only 6 backup generators, Project Double Reed will have the lowest air emissions out of all three projects by far, and will emit the lowest amount of greenhouse gasses including CO2, aligning it more closely with the State's CLCPA goals.
- Project Double Reed could qualify for an air registration based on its emissions, which is more easily obtained, but in any event would have a significantly more competitive application for a State Facility Air permit.
- Critically, both Rampart and Hydroscale will have emissions beyond that which is contemplated for a single facility under the GEIS, while Double Reed will be well within the limits for a single facility under the GEIS.

- Project Double Reed will only require 60,000 gallons of onsite diesel storage, as opposed to the 700,000 gallons required for Hydroscale, and 1,500,000 gallons for Rampart.
- Project Double Reed will have the least amount of generators, which will lessen impacts to noise and is the only project compliant with the GEIS noise thresholds.
- Project Double Reed, while requiring more water than Rampart, will require far less than Hydroscale.
- Project Double Reed will be the least visible project from surrounding uses including the Nation due to its low profile, inclusion of landscaping, and distance from the Nation.

Financial

- Project Double Reed provides best mixture of financial benefits, with the second highest number of jobs and pay behind Hydroscale; and the second highest payments behind Rampart in terms of land costs and PILOT payments, while requiring the second least amount of land behind Hydroscale.
- Project Double Reed proposes the highest capital investments.
- Because Project Double Reed will not provide payments through a future Host agreement associated with a future sales tax exemption, if the State makes servers exempt in the future, it will have no effect on these payments.
- Project Double Reed's application was by far the most credible both in terms of the reliability of the information contained therein as well as Project Double Reed's ability to deliver on its proposed project.

Accordingly, for the foregoing reasons, staff recommends that Project Double Reed be approved. In evaluating all three projects, Staff has ranked their overall applications based upon the above criteria as follows:

1. Project Double Reed
2. Project Hydroscale (RECOMMEND DO NOT PROCEED)
3. Project Rampart (RECOMMEND DO NOT PROCEED)

Exhibit A

Review Process Timeline

- September 2024: GCEDC received applications for development of a data center for Project Hydroscale and Project Rampart.
- September 26, 2024: GCEDC commenced formal outreach to the Nation regarding the projects, including a copy of a conceptual site plan for Project Hydroscale, and a formal notice letter to the Nation advising the Nation of the project and a request to meet with the Nation to discuss the project.[1]
- October 3, 2024: GCEDC Board resolved to circulate a lead agency package with its notice of intent to act as lead agency for Project Hydroscale and to grant an access agreement to Project Hydroscale. Project Rampart attends meeting and demands that the GCEDC Board adopt resolutions granting Project Rampart an access agreement and soliciting lead agency status for Project Rampart. The GCEDC Board declined to do so in light of the incomplete nature of Project Rampart's application.
- October 4, 2024: Project Rampart provides letter updating Application documents and requesting to be placed on GCEDC's October 30 meeting agenda.
- October 11, 2024: GCEDC provides separate letter to Project Rampart and Project Hydroscale requesting certain application deliverables be updated.
- October 15, 2024: Project Rampart responds to October 11 letter and provides updated EAF.
- October 21, 2024: GCEDC provided a letter requesting Project Rampart execute an unrevised copy of the Hold Harmless Agreement after counsel for Rampart proposed significant changes; Project Rampart provides executed Hold Harmless Agreement.
- October 31, 2024: GCEDC approved a resolution reestablishing itself as Lead Agency for SEQR review of Project Rampart and granting an access agreement to Project Rampart.
- November 18, 2024: Project Double Reed submits its initial application materials.
- December 5, 2024: GCEDC approved a resolution reestablishing itself as Lead Agency for SEQR review of Project Double Reed and granting an access agreement to Project Double Reed.
- December 11, 2024: GCEDC provided letters to all three Applicants describing the evaluation process.
- December 18, 2024: Project Double Reed meets with STAMP Tech Team.
- December 20, 2024: Project Hydroscale meets with STAMP Tech Team.

[1] Reference is made to the Initial Assessments for each project for a detailed description of outreach to the Nation regarding the project.

- December 20, 2024: GCEDC provides a letter to Project Double Reed summarizing its in-person meeting and requesting additional information/clarification.
- December 23, 2024: GCEDC provides a letter to Project Hydroscale summarizing its in-person meeting and requesting additional information/clarification.
- December 23, 2024: GCEDC Letter to all three Applicants providing extension to January 3, 2025 to provide final design packages and requesting additional information/clarification.
- January 7, 2025: GCEDC STAMP Committee meets with Project Rampart and Project Double Reed separately.
- January 7, 2025: GCEDC circulated the Initial Assessments ("IA") to Tonawanda Seneca Nation ("Nation"), NYSDEC, and the State Historic Preservation Office ("SHPO"), together with final design packages for each project.
- January 8, 2025: GCEDC STAMP Committee meets with Project Hydroscale.
- January 9, 2025: All three Applicants provided best and final offers for land and financial benefits.
- January 15, 2025: Letters provided to all three applicants requesting for additional information/clarification on information provided in best and final offers and final design packages.
- January 16, 2025: Project Rampart responds to January 15 letter.
- January 17, 2025: Project Double Reed responds to January 15 letter.
- January 21, 2025: Letters provided to all three applicants requesting for additional information/clarification on information provided in best and final offers and final design packages.
- January 22, 2025: Project Rampart and Project Double Reed respond to January 21 letter.
- January 27, 2025: Project Double Reed files supplemental response to January 21 letter.
- January 29, 2025: Project Hydroscale files response to January 21 letter.
- January 30, 2025: Project Hydroscale files supplemental response to January 21 letter.
- January 30, 2025: Nation comment letter received regarding GCEDC's review of projects.
- February 3, 2025: GCEDC holds public hearings on financial incentives for all three projects.
- February 10, 2025: Letters provided to all three applicants requesting for final clarifications on information provided regarding projects.

- February 14, 2025: Project Rampart files supplemental response to February 10 letter.
- February 14, 2025: Project Hydroscale files supplemental response to February 10 letter.
- February 20, 2025: Project Hydroscale files supplemental response regarding its incentive request and capital investment for the project.
- February 26, 2025: Project Double Reed files supplemental response to February 10 letter.[2]
- February 27, 2025: C&S provides final analysis of air emissions for each project.
- February 28, 2025: Town of Alabama provides letter concerning emergency services.
- February 28, 2025: Electrical analysis provided to GCEDC.

[2] Project Double Reed timely requested an extension of time to respond, as provided for in the February 10 letter to all three applicants.

Exhibit B

Detailed Project Summaries

PROJECT RAMPART, LLC. - PROJECT RAMPART

Project Rampart, LLC (Rampart) has submitted an application to the Agency for a certain project to acquire approximately 67 acres of real property for the planning, design, construction and leasing of an approximately 750,000 square foot data processing facility.

Project data:

a. Land purchase price of $350,000 per acre for 67 acres ($23.45 million). If there is any acreage remaining following completion of Rampart, Rampart has offered to sell the excess acreage back to the GCEDC at cost.
b. They would pledge to create 105 jobs at an average salary of $64,095 (annual payroll of approximately $6.73 million).
c. Total capital investment would be $3.3 billion.
d. Total proposed PILOT and Host Agreement payments over 20 years is $135 million.

Environmental Information:

a. Project Rampart will develop approximately 35.7 acres of a 67 acre site and create 28 acres of impervious surface.
b. The proposed data center will be one, single story building, 40 feet tall, 400 feet wide, and 1,875 feet long, totaling 750,000 square feet.
c. Stormwater will be managed with a single, 10,000 gallon infiltration basin (7.7 acres).
d. Project Rampart will create an additional demand of 3,675 gallons of water per day and will create the same in wastewater.
e. Project Rampart will require the storage of approximately 1,500,000 gallons of diesel fuel on site and will be required to comply with federal and state regulatory requirements for this volume of petroleum storage.
f. Project Rampart estimates its total annual air emissions from its operation of its backup generators will exceed 50% of Title V Air Permit threshold for Nitrogen Oxide at 89 tons per year (tpy). Project Rampart's air emissions will also exceed the estimated annual emissions for a single facility anticipated under the STAMP Generic Environmental Impact Statement ("GEIS"); and will emit 7,834 tpy of Carbon Dioxide. See the Emissions Memo attached hereto for additional information regard air emissions.

g. Project Rampart has not provided a conceptual landscape plan.
h. Project Rampart is relatively well screened from surrounding uses except from the Nation's eastern border directly adjacent to the Project.
i. Specific trip generation estimates were not provided for Project Rampart but based on the number of proposed employees (108), it can be assumed that there will not be a significant impact on traffic.
j. Project Rampart will demand 200 MW of electric power and will include 120 backup generators to supply power in the event of an emergency power outage.
k. Sound levels associated with the Project during operation of backup generators ranges from 82 dBa at the Project's southern property line to 50 dBa at the northern boundary of the STAMP Site, adjacent to residential receptors. While the noise study provided did not provide information regarding the boundary of the Nation's Territory for all noise conditions, it appears likely that noise levels would continue to exceed the 45 dBa nighttime limitation.
l. New lighting will be required on the project site, which will be downward facing and dark-sky compliant.
m. Project Rampart will have minimal impact on emergency services.

Additional information and considerations based on analysis of materials submitted by Rampart:

a. Host Agreement payments are predicated upon the tenant requesting a sales tax exemption every year. However, a tenant has not been identified yet. If the tenant does not request one, or the tax law changes, that $1 million per year payment will not be paid to the community.
b. Rampart does not have a tenant committed yet. They have a list of companies that they are hoping to attract to the site.
c. Rampart's ownership team does not own or operate any data center facilities, as the list of projects provided as references had previously been sold. It appears that the ownership team functions in a developer role for prior projects, where entitlements are obtained and then sold. As noted above, Rampart confirmed that this project would be sold if conditions were favorable.
d. One reference provided by Rampart was for a deal where they purchased vacant land and then flipped it to another developer a few years later at a large profit without undertaking any development following acquisition of permits and approvals.
e. The representatives from PRP previously represented to the Board that they would own the project for the twenty year period of the PILOT. Upon further inquiries, it was disclosed that PRP does not, in fact, own Project Rampart, LLC but rather, their affiliates do. Further while they committed that Project Rampart,

LLC would not sell the land for the twenty year period of the PILOT, they reserved the right to sell the LLC if the economic conditions were favorable.

f. Without a tenant, the construction costs and server costs are an estimate. Those numbers could change (especially the servers number) once a tenant is identified, requiring them to potentially come back and ask for an increase to their sales tax exemption which would have an effect on the ratios that were analyzed at the time of this decision.

g. Since filing its application, Project Rampart has engaged in an aggressive campaign in favor of Rampart's Application that fall well outside of GCEDC's standard application review procedures. In addition to aggressive lobbying techniques, Project Rampart has engaged in behavior seemingly designed to intimidate Staff, the GCEDC Board, and other applicants. Specifically, Project Rampart:

    a. Demanded at the GCEDC Board's October 3, 2024 meeting that the GCEDC Board provide Rampart with an access agreement and SEQRA lead agency designation during a presentation on their project, despite never previously requesting the same. During this Board meeting, Rampart staff repeatedly interrupted the GCEDC Board's agenda notwithstanding repeated admonishments from GCEDC's counsel. Rampart staff failed to adhere to the basic rules of civility and decorum that GCEDC expects from all attendees at its meetings.

    b. Following the GCEDC Board meeting, GCEDC Board Chairman Peter Zeliff reached out to Paul Dougherty (Project Rampart President and CIO) offering to meet with Project Rampart but also requesting that Project Rampart refrain from name calling and similarly unproductive attacks. This was in response to Mr. Dougherty's email immediately prior in which he referred to a competing company as "neophytes" and insinuating their inferiority due to their status as a Canadian company. In response to Chairman Zeliff's offer to meet, Mr. Dougherty denied any wrongdoing and baselessly accused GCEDC of having approved a competing project.

    c. During a call with GCEDC staff discussing confidential business matters relating to both Project Rampart as well as the development of STAMP, Project Rampart representative Tom Wasko recorded the conversation without the permission or knowledge of GCEDC staff. We are further aware that Mr. Wasko then released the audio recording of that meeting (including the confidential business matters therein) to local media.

    d. Rampart legal counsel sent a letter to Project Double Reed threatening litigation should Double Reed fail to withdraw its application from consideration based on allegations of "common law copyright infringement, unfair competition, unfair and deceptive trade practices, and

interference with prospective economic advantage." The allegations stem from claimed similarities found in the Emergency Services Reports from both companies as well as the Full Environmental Assessment Form. The Board should be aware that it appears that Rampart copied portions of the Full Environmental Assessment Form from prior GCEDC projects. From the Staff's perspective, these types of activities weigh against selecting Rampart.

e. As a direct result of Project Rampart's repeated threats of litigation against GCEDC and the other applicant, GCEDC was unable to obtain an industry consultant to review and analyze the technical data for each project. Specifically, no industry consultant GCEDC reached out to was willing to officially serve in that role because of concerns that Project Rampart would file suit against them. As a result, GCEDC staff had to invest significant time and effort into obtaining expertise into data center operations etc. Needless to say, this does not create a strong foundation upon which to build a solid relationship.

POTENTIA HOLDINGS, LLC. - Project Hydroscale

Potentia Holdings, LLC (Potentia) has submitted an application to the Agency for a certain project to acquire approximately 43 acres of real property for the planning, design, construction and leasing of an approximately 900,000 square foot data processing facility.

Project data:

a. Land purchase price of $300,000 per acre up to 43 acres ($12.9 million).
b. They would pledge to create 200 jobs at an average salary of $142,000 (annual payroll of approximately $28.4 million).
c. Total capital investment would be $5.4 billion.
d. Total proposed PILOT and Host Agreement payments over 20 years is $76 million.

Environmental Information:

a. Project Hydroscale will develop approximately 40 acres of a 43 acre site and create approximately 25 acres of impervious surface.
b. The proposed data center will consist of two, 2-story buildings, with each footprint totaling approximately 223,000 sq. ft., for a total of approximately 446,000 sq. ft of footprint. Each building will have a second story, raising the total area requiring heating and cooling to approximately 892,000 sq. ft.

c. Project Hydroscale proposes to manage stormwater with a single, 7.75 acre foot bio-retention area.
d. Project Hydroscale will create an additional demand of 28,000 gallons of water per day and will create 2,500 gallons per day of sanitary wastewater.
e. Project Hydroscale will require the storage of approximately 700,000 gallons of diesel fuel on site and will be required to comply with federal and state regulatory requirements for this volume of petroleum storage.
f. Project Hydroscale estimates its total annual air emissions from its operation of its backup generators will exceed 50% of Title V Air Permit threshold for Nitrogen Oxide at 99.9 tpy. Project Hydroscale's air emissions will also exceed the estimated annual emissions for a single facility anticipated under the GEIS, and will emit 14,611 metric tpy of Carbon Dioxide.
g. Project Hydroscale does not include a conceptual landscape plan
h. Project Hydroscale provided visual simulations of the data center without information as to the location or perspective of the viewpoints. Notwithstanding, it appears Project Hydroscale will be screened from surrounding uses, but given its height, will be visible above depicted vegetation.
i. Project Hydroscale anticipates the creation of 475 additional vehicle trips to the site at full build out during both the AM and PM peak hour.
j. Project Hydroscale will demand 195 MW of electric power and will include 200 backup generators to supply power in the event of an emergency power outage.
k. Noise levels for the Project when operating backup generators include measurements of 71 dBa at the eastern boundary of the Project site, 59 dBa at the northern boundary of the STAMP Site, and ranges from 47 to 49 dBa along the boundary of the Nation's Territory.
l. New lighting will be required on the project site, which will be downward facing and dark-sky compliant.
m. Project Hydroscale will have minimal impact on emergency services

Additional information based on analysis of materials submitted by Potentia:

a. JLL, which represents Potentia, is listed as one of the top data center consultants in the world.
b. JLL submitted references for data center projects that they have worked with, but have no ownership in.
c. Potentia is also proposing to have a 1 to 1 mw backup generation on site. This number of generators would require a Title V air permit and that process could take several years, which would make it difficult to construct the Project in a timely manner (the NYSDEC regulations prohibit them from starting construction until they have obtained the required air permit).

d. Potentia has confirmed that they have one of the three to four potential tenants for their proposed facilities in line with a soft commitment.
e. The wage and job information submitted appears to be higher than the industry standards.
f. With only one tenant, the construction costs and server costs are an estimate. Those numbers could change (especially the servers number) once a tenant is identified which would require them to potentially come back and ask for an increase to their sales tax exemption which would have an effect on the ratios that were analyzed at the time of this decision.
g. The PILOT and Host Agreements payments were initially a 50% abatement off of market rate, later changed to a 0% abatement to match the other projects. This "match" offer is inconsistent with Staff's request that companies provide their "best and final offers" regarding financial incentives. Nevertheless, an updated financial analysis for the Project has been prepared for the Board's consideration.

STREAM US DATA CENTERS, LLC. - PROJECT DOUBLE REED

Stream US Data Centers, LLC (Stream) has submitted an application to the Agency for a certain project to acquire approximately 60 acres of real property for the planning, design, construction and leasing of an approximately 900,000 square foot data processing facility.

Project data:

a. Land purchase price of $300,000 per acre up to 60 acres ($18 Million).
b. They would pledge to create 122 jobs at an average salary of $89,000 (annual payroll of approximately $10.86 million).
c. Total capital investment would be $6.3 billion.
d. Total proposed PILOT and Host Agreement payments over 20 years is $128 million.

Environmental Information

a. Project Double Reed will develop approximately 40 acres of a 60 acre site and create 40 acres of impervious surface.
b. The proposed data center will consist of three, single story buildings, 41 feet tall (together with a rooftop noise mitigation screen), 450 feet wide, and 850 feet long, totaling 900,000 square feet.
c. Project Double Reed proposes to manage stormwater with three stormwater retention ponds in accordance to a conceptual stormwater management plan.

No total size is given for these ponds, but the FEAF indicates 19.2 acres of the site will be utilized for the stormwater ponds and open space.

d. Project Double Reed will create an additional demand of 10,000 gallons of water per day and will create 10,000 gallons per day of sanitary wastewater.
e. Project Double Reed will require the storage of approximately 60,000 gallons of diesel fuel on site and will be required to comply with federal and state regulatory requirements for this volume of petroleum storage.
f. Project Double Reed estimates its total annual air emissions from its operation of its backup generators will not exceed 50% of Title V Air Permit threshold for Nitrogen Oxide at 8.6 tons per year (tpy), and will emit 533 tpy of Carbon Dioxide.
g. Project Double Reed does not include a conceptual landscape plan
h. Project Double Reed provided visual simulations of the data center which indicate it will be screened from surrounding uses.
i. Project Double Reed anticipates the creation of a maximum of 99 AM peak hour vehicle trips and 81 PM peak hour vehicle trips to the site.
j. Project Double Reed will demand 250 MW of electric power and will include 6 backup generators to supply power in the event of an emergency power outage.
k. Project Double Reed provides that the maximum noise impacts to residentially zoned properties will be below 45 dBa and maximum noise impacts at the Nation's Territory boundary will be 34 dBa, consistent with existing ambient noise levels.
l. New lighting will be required on the project site, which will be downward facing and all lighting on the perimeter of the site will be shielded from outside uses.

Additional information based on analysis of materials submitted by Stream:

a. Stream has confirmed that they have secured a soft commitment from a prospective tenant which would seek to utilize 100% of the space contemplated in the Application and that this prospective tenant is a Fortune 50 company with annual revenues of over $100,000,000,000.
b. All of the payments proposed by Stream are to be incorporated into a PILOT with none proposed for a future Host agreement associated with a future sales tax exemption. Therefore, if the State makes servers exempt in the future, it will have no effect on the payments proposed by Stream.
c. The server costs provided are believed to be a good estimate since they have a soft commitment from a tenant and are fully familiar with the tenant's specifications.
d. The employment and wage information provided are believed to be a good estimate since they have a soft commitment from a tenant and are fully familiar with the tenant's operations.

e. Stream has proposed to have only 6 onsite generators. This would NOT require a Title V permit which could take several years to obtain. Instead, Stream will require a either a State Facility Permit which DEC indicates could be processed in a few months, or an air registration.

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Peter Capitano

To: streampublichearing@gcedc.com; Press.RSVP@exec.ny.gov; Hope.Knight@esd.ny.gov
Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Onalie Pettit

Your public obligation is to protect us from business outrunning public interest. Forcing AI on the public through Google etc does not represent me, my interests, or my choice. To then take my tax dollar to fund it, is the definition of coercive. Many states are putting a moratorium on data centers until they can be studied and better considered. Please stop this, now.

Sincerely,

Nadine Hoover

Subject: Comment re: Data Center

I strongly oppose a data center in this region. This is a violation of land and humanity. We do not want our communities to suffer. We want to protect land, wildlife and water. We do not want people to suffer with rising costs and the invasion of their communities. This proposal negatively impacts real humans in our world, which already grows bleaker each day.
Be human.
Be human.
Be human.
Be human.
Frankly, the proposal is laughably evil. It sounds like a greedy Disney villain came up with it.
Thanks!

Subject: Please reject this data center

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed — the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

Reject the incentives application;
Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;
Conduct a Supplemental EIS for the entire STAMP site, taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;
Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC, and the State Historic Preservation Office on those impacts.
Conduct SEQR review that includes a detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that construction is forecast to take at least five years;
Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;
Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.
Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Furthermore if a data center cannot provide concise answers to the following to the public, they should not be allowed to build.

How much waste water will the facility produce on a daily basis?
How will the facility clean that water and return it to source?
What are the long term ecological impacts of returning water back to source?
How many jobs will the site create?
What type of jobs including pay scale?
How many of those jobs will be filled locally?
How much electric draw will the plant pull?
How will that affect regional pricing?

What will the impacts be to clean air?
What noisy will the plant be?
How long is the build process?
How much pollution will be generated by the build process?
Will this be a platinum Leed certified building? If not, why not? This should be tied to their tax incentive.
How much habitat loss will happen because of this? Where is the replacement for that habitat loss?

I reserve the right to submit further comments on the April 6 revised SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sent: Friday, April 17, 2026 11:05 AM
To: streampublichearing@gcedc.com
Subject: Please Reject the Data Center Proposal in WNY

To whom it may concern,

My name is Carly and I am writing today because I am very concerned about the potential for a data center to be built in the Genesee area of Western New York. I have lived in Western New York for the past 3 years and I have seen my electricity bill skyrocket, which I am struggling to pay for while I'm in graduate school to become a Doctor. Building a data center that supports AI infrastructure will only significantly increase the costs of electricity for residents, such as myself.

Additionally, the proposed AI data center will deplete our fresh water from Lake Erie and surrounding bodies of water. It has been well documented that large AI data centers consume up to 5 million gallons of water per day. Lake Erie is experiencing water level declines, an AI data center would only deplete the water levels much quicker. Not to mention, AI data centers waste resources.

Please, I an encouraging you to reject the data center proposal and protect the Western New York environment.

Best Regards,
Carly

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

The notion that we do not have enough electricity to support the CLCPA but are willing to open this data center, which uses an exorbitant about of energy, is ridiculous, This data center will also pollute our waterways. Please choose people and the environment over profit!!

Sincerely,

Andrea McIntosh

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: Vote Solar comments RE: STAMP Data Center Complex

To the Genesee County Economic Development Center (GCEDC):

My name is Kartik Amarnath, Mid-Atlantic Regulatory Director at Vote Solar. Vote Solar is a national non-profit organization fighting for the transition to an affordable and clean energy system. Vote Solar utilizes a combination of deep policy expertise, coalition building, and public engagement and has actively engaged in New York's energy landscape for well over a decade.

We submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

Our organization is committed to the just implementation of the Climate Leadership and Community Protection Act. The proposed data center lies within a Disadvantaged Community, as designated by the Climate Justice Working Group, which subjects this project to review under the CLCPA. Per Section 7(3) of the law, in considering and issuing permits, licenses, and other administrative approvals and decisions, all state agencies, offices, authorities, and divisions shall not disproportionately burden Disadvantaged Communities. Given the threats posed by this project to the Tonawanda Seneca Nation which lies within this Disadvantaged Community, and our overarching respect for Indigenous sovereignty, we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of NYS Department of Environmental Conservations' recommendations with respect to the SEQR environmental review process, and call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts;

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public; and

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation. It also threatens our Climate Law and violates the sovereignty and way of life of the Tonawanda Seneca Nation.

In closing: we oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of DEC's recommendations with respect to the SEQR environmental review process, and call on GCEDC to reject the incentives application from STREAM US Data Centers.

Sincerely,

Kartik Amarnath
Mid-Atlantic Regulatory Director

I as a citizen of NYS do not want our fresh water nor our electricity to be used for data centers. Data centers have caused irreversible damage to aquifirs all over the USA by depleting them of all of their fresh water which has dried up wells on hundreds of properties, have caused heavy metals to enter streams,

creeks and lakes with their toxic runoff, which has also cost civilians their fresh water wells which they must pay thousandsof dollarsto drill new wells that were 60 feet deep and are now completely dry only after 2 years. And now all of the wildlife who depended on those streams, creeks, ponds and lakes have died or had to relocate because of no fresh water is available any longer, increased costs of electricity bills and taxing our already aged grid infrastructure that will be passed on to consumers as has been the practice in other states that data centers have been built in. The noise pollution will cause deafness in wildlife and human beings because of the wide range of decibels from these data centers. THE air pollution has also dramatically increased with other states data centers. This will increase the amounts of asthma COPD, pneumonia bronchitis and those suffering from long covid increased infections, increased hospitals and urgent care visits. Children will be the first ones to suffer from the pollution from gas generators, no clean drinking water, toxic runoff in our streams creeks ponds rivers and lakes, be the first to go deaf and so much more. Our next generations will pay the price for the overwhelming greed from the corporations and government funneling our tax dollars into projects like this rather than food, housing, education, medical and dental care, daycare, and humanitarian necessity. #NODATACENTERS

Subject: Genesee county data center

The proposed data center to be build in genesee county will not benefit the community and should not be built.
The incentives they promise to bring will not be long lived or happen at all.
All the center will do is consume and pollute the water of the Great Lakes, and killing ecosystems around it. With many parks in the area to likely be affected
Due to the centers usage of electricity it's also going to raise the cost of electricity in the area. No community member wishes for their already high cost of living to increase due to another cash grab for the rich.
Genesee county also consists of a 27% majority of 45-60 year old people which are at higher risk of health problems that this center will only raise.

Subject: Alabama, NY

Please listen to the public, hundreds have shown up over and over again to stand AGAINST the STEM data center being placed in their area. I live very far downstream from this project, I was briefly a resident in Batavia, and a young adult with a car that would always take me to the Iroquois reservations where I would feel comfortabls enough to talk to my God, our lord and savior. I PRAY that this request with many behind and in front of it is enough for the company and investors (like Tonowanda) can take the peoject to idk TOMOWANDA or to urban/industrial zoned lands. Western new yorks biggest draw isn't how much we have in power, how expensive gas and living are and it sure isn't in conflicts between agricultural and industrial energy complexes. There are wind turbines in my back yard starting this year. The black bear that lived between my property and my back neighbors is gone from the construction and deforestation required for this massive project that we farmers opposed but NO ONE stopped it. Soon the Eagles between my house and Centerville, NY will no longer fly. Trust me when I tell you a population of native americans having their land stolen in the modern century just as it was in the past is an awful look. "NYS allows company to set up shop on stolen native land" even if it isnt stolen the titles will be catchy. The bad attention will come. NYS should embrass green energy, and data centers are a necessity when trying to stay in competition with the rest of the world but what if NYS was the best kept environment? Always looked after its people, native americans and farmers alike? What would it look like to be the NY we want while still giving STEM a chance but SOMEWHERE ELSE. The water useage, the tax breaks, the budget, these are all massive numbers given to and by STEM and NYS officials but these are all numbers we do not understand in little communities that never have even seen that much cash PUT INTO their communities. I understood 1200 construction jobs for a short time and then only 125 new jobs in a facility that would stand on once holy land. Land that Natives have prayed on, for and with... It's a shame- a real shame. The kind of shame that could wake my environmentalist father from the grave. Maybe NY doesn't have to change, people don't have to be bothered and environments can stand as is for another few generations. Or maybe you are like the pedofiles and ellites trafficking children, killing scientists and silencing whistle blowers for the money that is thrown at you to constantly do the wrong thing. What kind of person do you want to be? If this happens- the public will know that this project was supported most likely by one of THEM. And maybe that kind of speculation, publicity and scrutinizing wont matter, maybe it wont lead to reelections or outrage but I do curse anyone with pockets that will never fill and holes that will always exist if the gavel goes down in favor of this attrocity. It is truth i speak, hope I have and of course a curse of the spiritual variety to all involved.

Subject: NO to Data Centers!

Hello,

I am a Genesee County resident and I am reaching out to voice my opinion on the proposed data center in Alabama NY. I am completely against the building of this data center. The pros do NOT outweigh the cons and I stand with my fellow community members who are not interested in this project.

Regardless of how carefully this center can be built and run in respect to environmental concerns, the best course of action is to not build it at all. The amount of jobs that would be created is minimal compared to the environmental impact to the local wildlife, which already lost thousands of acres of accessible land recently during the development of 5000 acres of solar panels in this county. Keep Genesee county accessible to the wildlife that calls it home. We don't need another data center here. We need to protect wild spaces for future generations and that includes the areas directly next to them.

Thank you,

Valerie Leavy
Genesee County Resident
Stafford NY

April 17, 2026

Genesee County Economic Development Center

99 Medtech Drive
Batavia NY 14020

Dear Chairman Zeliff and Members of the Board,

On behalf of the Climate Solutions Accelerator, we write to express our strong opposition to the proposed STREAM data center project at the STAMP site in Genesee County, New York.

Our organizational mission is to build a healthier, more equitable, and regenerative community by catalyzing local efforts to eliminate greenhouse gas emissions and address the effects of climate change. The STREAM proposal raises serious concerns across each of these priorities.

The project's extraordinary energy demand, estimated at approximately 500 megawatts, or roughly one-fifth of the daily output of the Niagara Falls hydropower system, poses significant risks to grid reliability and affordability for New Yorkers. At a time when New York is working to decarbonize its energy system and electrify buildings and transportation, allocating such a large share of clean energy to a single private facility threatens to undermine broader climate goals and will drive up costs for ratepayers.

Moreover, the environmental impacts of the project are deeply concerning. The proposed site is surrounded by ecologically sensitive wetlands and in close proximity to the Iroquois National Wildlife Refuge and the Tonawanda Seneca Nation's territory. Community members and experts have raised alarms about habitat fragmentation, biodiversity loss, and the disruption of critical ecological connectivity. These impacts are incompatible with New York's commitments to biodiversity protection and environmental stewardship.

The project also raises profound environmental justice concerns. The Tonawanda Seneca Nation has clearly and consistently expressed opposition, citing threats to cultural practices, land use, and sovereignty. Locating a massive industrial facility adjacent to Indigenous lands perpetuates a long history of inequitable and extractive decision-making. This alone should give policymakers pause.

The economic justification for the project is weak and misaligned with public interest. Reporting indicates that the project could receive hundreds of millions of dollars in subsidies while generating relatively few permanent jobs. This represents an extraordinarily poor return on public investment, particularly when compared to alternative uses of those funds that could create more jobs, strengthen local infrastructure, and accelerate the clean energy transition, thereby advancing a more equitable and regenerative community.

Finally, the scale and speed of this proposal raise questions about transparency and governance. Given the magnitude of the project and its potential impacts, it is essential that environmental review be rigorous, independent, and free from conflicts of interest.

For these reasons, we respectfully urge the GCEDC Board to:

- Reject the STREAM data center project at STAMP;
- Ensure that environmental reviews are led by independent and appropriate agencies;
- Prioritize investments that deliver clear public benefits, including reducing emissions, good-paying jobs,and community resilience; and
- Center environmental justice and Indigenous sovereignty in all decision-making.

New York has positioned itself as a national leader in climate action. Approving a project of this scale and impact would undermine that leadership.

We urge you to uphold the State's climate and equity commitments, and to stand with local communities and protect our shared natural resources.

Sincerely,

Kristen VanHooreweghe, PhD

Our organizational mission is to build a healthier, more equitable, and regenerative community by catalyzing local efforts to eliminate greenhouse gas emissions and address the effects of climate change. The STREAM proposal raises serious concerns across each of these priorities.

The project's extraordinary energy demand, estimated at approximately 500 megawatts, or roughly one-fifth of the daily output of the Niagara Falls hydropower system, poses significant risks to grid reliability and affordability for New Yorkers. At a time when New York is working to decarbonize its energy system and electrify buildings and transportation, allocating such a large share of clean energy to a single private facility threatens to undermine broader climate goals and will drive up costs for ratepayers.

Moreover, the environmental impacts of the project are deeply concerning. The proposed site is surrounded by ecologically sensitive wetlands and in close proximity to the Iroquois National Wildlife Refuge and the Tonawanda Seneca Nation's territory. Community members and experts have raised alarms about habitat fragmentation, biodiversity loss, and the disruption of critical ecological connectivity. These impacts are incompatible with New York's commitments to biodiversity protection and environmental stewardship.

The project also raises profound environmental justice concerns. The Tonawanda Seneca Nation has clearly and consistently expressed opposition, citing threats to cultural practices, land use, and sovereignty. Locating a massive industrial facility adjacent to Indigenous lands perpetuates a long history of inequitable and extractive decision-making. This alone should give policymakers pause.

The economic justification for the project is weak and misaligned with public interest. Reporting indicates that the project could receive hundreds of millions of dollars in subsidies

while generating relatively few permanent jobs. This represents an extraordinarily poor return on public investment, particularly when compared to alternative uses of those funds that could create more jobs, strengthen local infrastructure, and accelerate the clean energy transition, thereby advancing a more equitable and regenerative community.

Finally, the scale and speed of this proposal raise questions about transparency and governance. Given the magnitude of the project and its potential impacts, it is essential that environmental review be rigorous, independent, and free from conflicts of interest.

For these reasons, we respectfully urge the GCEDC Board to:

- Reject the STREAM data center project at STAMP;
- Ensure that environmental reviews are led by independent and appropriate agencies;
- Prioritize investments that deliver clear public benefits, including reducing emissions, good-paying jobs,and community resilience; and
- Center environmental justice and Indigenous sovereignty in all decision-making.

New York has positioned itself as a national leader in climate action. Approving a project of this scale and impact would undermine that leadership.

We urge you to uphold the State's climate and equity commitments, and to stand with local communities and protect our shared natural resources.

Sincerely,

Kristen VanHoboreweghe, PhD
Senior DIrector of Programs
Climate Solutions Accelerator

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

streampublichearing@gcedc.com

Subject: Say no to a data center here in Western New York

This will only benefit multibillionaires, it will drastically increase our electric rates, and the water they use to cool their data center will be polluted with extremely harmful "forever chemicals" that will be released into our watershed.

Subject: Saying NO to STAMP

To whom it may concern,

As a life long resident of Western New York, I want to give my two cents about this horrifying project. I live in Genesee County and cannot think of a single topic that I have heard more residents agree on. This STAMP project is ridiculous and wasteful. Wasting the area's resources on this project will do nothing but hurt the people who live here.

I have such a hard time understanding why people put higher value on their wealth than on so many people's lives. I was raised to be trusting of people, but honestly how can I when there are people who are actively willing to harm the environment, people's way of life, etc just to make extra money they don't need anyway. The point of life shouldn't be making more money, it should be enjoying the world we live in. Don't destroy the land that is vital to the wildlife that has been there long before us. Don't take more land from the indigenous communities who have suffered enough already. There should be more to life than money which really is little more than a social construct. The world existed before money became what drove it.

Stop thinking with your wallet and start using your brain. The community doesn't want this. The Earth doesn't want this. NO TO STAMP!

I stand with the Allies of the Tonawanda Seneca Nation.

Signed,
Monica Colantonio

Subject: STAMP Project

Good afternoon Mr. Suozzi. I am writing concerning the STAMP Project and its impact on the environment, but more specifically how it will affect the lands of the Tonwanda.

I have been associated with the Tonawanda for the last 6-8 years. Myself, and my family, have been treated very well and welcomed by the Tonawanda. (Including one of my children who considers The Tonawanda family.) Honestly, I don't know that I have met a nicer, welcoming group of people. During this time it has become very clear to me, that this project will adversely affect their ability to continue living their culture, quite frankly, it will endanger it. The Tonawanda believe that the land is sacred and should be treated as such. This plant would not only remove part of their land, but will change the landscape of those who inhabit the land around it, including those of non-native descent. The noise pollution alone will ruin the peace that anyone living in the shadow of this center, and beyond, will endure. Why would any homeowner want this noise pollution in their backyard?

I believe this project has already caused some damage to some lands and had to be stopped, depsite assurances that there was no danger. The corporation looks at this as a means to make money, to bring jobs and allegedly bring income to Genesee County, but at what expense? Have we, as a nation, not taken enough from The Tonawanda and all Nations? Why allow what little they have left to be taken from them? Why let the land that brings them closer to the Creator and their community be damaged and taken away? Why have them suffer mistreatment yet another time? I am sure there are other, non-rural locations, the corporation can find to put this plant. Are they looking in this direction because they believe The Tonawanda can be sold into this and that the leaders of Genesee County will assist them in running roughshod over The Tonawanda? While The Tonawanda hold their autonomy, they are a large part of this community, they work, play and spend in this community, their opinions and concerns should take precedence in any decision made regarding this plant. And simply put, they deserve what most people strive for, a place to call home, a place they feel safe.

I ask that you, and your committee, please not authorize this project, it would be detrimental to the well being of The Tonawanda, a group of people who exhibit, kindness, grace, love and

acceptance. The Tonawanda, and other Nations, have suffered enough. They have been some of the most underserved, marginalized people in this country, please don't take a step backward. Give The Tonawanda the respect they deserve.

Sincerely,

Kristin M. Kostowniak

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

As a nurse, I declare my unequivocal opposition to the proposed STAMP data center. My life's work is rooted in the protection and preservation of human life, and I cannot stand by while a project threatens the health of our communities and our environment.

I stand in unwavering solidarity with the Tonawanda Seneca Nation and all Indigenous peoples who are leading the fight to protect their sovereign lands, their sacred traditions, and the region's vital natural resources. Their struggle is a struggle for the health of the land and water that sustain us all.

My job is dedicated to healing and caring for people. This proposed data center, with its massive consumption of energy, its planned emission of hazardous pollutants, and its strain on our shared resources, is fundamentally at odds with my core values. It represents the prioritization of corporate profit over the well-being of living beings and the planet itself.

It is unconscionable that New York State would consider granting $1.4 billion in taxpayer subsidies to this single corporate project while our healthcare system starves for resources. Every day on the front lines, I witness the devastating effects of underfunding: unsafe staffing levels, shuttered hospital wings, and barriers to patient care. These public funds should be invested in strengthening the services that actually keep our communities healthy, not in underwriting a private corporation that will pollute our air and water.

As a healthcare professional, I believe in a duty of care. I value life in all its forms over profit. I urge New York State and the developers to abandon this destructive project and instead invest in a future that supports public health, environmental justice, and respect for Indigenous sovereignty.

Sincerely,

Sarah Buckley

CWA Local 1168, a union representing over 4,000 healthcare workers in Western New York, is calling for the rejection of the $1.4 billion public subsidy package proposed for the STAMP data center project.

We strongly support the creation of good, family-sustaining union jobs for the skilled trades that would build this facility. Our opposition is aimed at the unprecedented corporate handout being requested.

It is fiscally irresponsible for any entity to consider a subsidy of this magnitude for a private corporate project while our public institutions are in crisis. We see this everyday in healthcare, our members are on the front lines every day and witness the devastating effects of chronic underfunding: unsafe staffing levels, long emergency room wait times, and reduced services that put patient lives at risk.

This is a matter of priorities. Taxes on profitable corporations should be used to fully fund critical healthcare infrastructure, hire healthcare workers, create good union jobs in renewable resource infrastructure that would not interfere with the Tonawanda Seneca Nation and all Indigenous peoples who are leading the fight to protect their sovereign lands, their sacred traditions, and the region's vital natural resources.

We urge state and local officials to reject this corporate handout and redirect our public funds to where they are needed most: the health and well-being of our communities and good union jobs in more sustainable projects.

Sincerely,

Communication Workers of America

Local 1168

Subject: NO DATA

I am writing as a citizen of America hailing from Rochester, New York. I am a mother, wife, devoted Catholic, teacher, retail clerk, active community member, and adorer of all of God's creations.

NO DATA CENTERS!! I know comments are being taken at this time towards up coming choices until midnight tonight, April 17th. A community leader should listen to the people who lifted them up to that position or we will let you down when you let us down. This relationship is either symbiotic or it is parasitic... and I don't vote for parasitic leader. Who would?

Subject: STREAM US Datacenter proposal

Good morning,

My name is Kevin Duggan, and I live in North Tonawanda, one county over in Niagara. My friend who lives in Batavia recently made me aware of the proposed STREAM US Data Center project, and I wanted to voice my concerns.

In the short term, the construction of such a huge project would certainly impact the nearby community. My in-laws, until they recently moved, lived near the site of the new Amazon warehouse being built in the Town of Niagara. The traffic impacts from heavy construction vehicles and road rebuilding were quite unpleasant in their neighborhood and likely affected the value of their home (particularly harsh since they were actively moving!) This may not affect me directly, but it would certainly affect my friend who is currently looking at housing options in Batavia.

In the longer term, and to my mind more importantly, I do not want a 500-megawatt data center being built in Western New York. In my home city of North Tonawanda, a relatively small data center was built for cryptocurrency mining operations. Despite the noise baffles put up around the machines, neighbors are still bothered by the constant fan noise.
Furthermore, that datacenter was built on the grounds of a formerly disused 60-megawatt gas fossil fuel power plant, which was re-fired just for the purpose of powering the computers, increasing pollution across the city for very little material benefit that anyone actually in the city has felt. Whatever value comes from betting on cryptocurrency doesn't stay in the city.
How much more pollution will be produced by adding half a gigawatt of electrical load to the grid in Western NY? How much water will it draw from the city supply? **What will it do to my already-rising electricity bill?**

I urge the GCEDC to reject cooperating with STREAM US in trying to build a huge, extractive project in our part of the state that will increase our utility costs and decrease our quality of life for the fig-leaf benefit of enriching distant corporations and providing a pittance of local jobs.

Thank you for your time,
Kevin Duggan

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Joe LaPorte

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

This is unconscionable. There's got to be more environmentally and citizen friendly ways of creating more jobs and using tax payer dollars.

Sincerely,

Man Kaplan

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

What happens if these data centers become prematurely obsolete and just decide to cut their losses and leave.

Given the nature of the tech industry and AI development, there is a chance they may choose to automate many tasks to the point of running on a skeleton crew. If done this would only create temporary jobs. Are there any guarantees?

Sincerely,

Rob Rivera

New York can and should be an example to America of what is possible when we are environmentally, socially, and economically conscious. New Yorkers deserve better than to have our lives upended, and our land ruined, by tech companies who would destroy our environment forever to line their already overflowing pockets.

Sincerely,

Felice Cook

Subject: NO data center

As a New York State resident I sincerely oppose the building of a data center on our indigenous land. The impact will be felt statewide as our already skyrocketing utility bills will go up. This will destroy our natural environments, pollute our water and skies, and serve only the 1%. I stand with the Tonawanda Seneca nation and all of New York State when I say I oppose this and any future data centers!

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Jahangir Qazi

No tax abatements for data centers. There needs to be tax abatements paid in advance before anything is built to cover the billions of dollars in damage that will reach further than Rochester. No data centers in NY state!!!

Sincerely,

Madi Peña

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

My family is moving to Monroe County in 6 weeks. We are leaving a state government that supports businesses with long term detrimental environmental impact. I hope we are coming to a region that prioritizes the people and land more than cheap data center money.

Sincerely,

Ashley Doutey

Please say no to this absurd plan. My family loves going to the Iroquois Wildlife Refuge. Please do not let this be built and harm the surrounding wildlife, the rest of Western New York, and future generations. No money is worth the shame it will bring to your family and their future generations.

Sincerely,

Anthony J Riedy

To: streampublichearing@gcedc.com
Subject: Data Center

To people that use water and electricity,

Please do not allow this data center to be built. The tax cuts or roughly 100 jobs are not worth the damage it will do not only to the land and animal life, but to the men, women and children that rely on water and power to make it to work and school each day.

Those of you that make decisions will also be affected by it too. Think of how sick all of us will get from drinking dirty water or having none to bathe with. Even your energy bill will go up too. And with gas prices being well… unpredictable at the moment.

We should be doing what we can to protect what we have, not wasting it on a data center for ai that is only making our children bad at reading and writing.

This is a matter of safety for New York's natural beauty and the people who live here. I love my state, I love my region and I want to continue to love it the way it is.

Thank you for your time

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Rachel I

Subject: Opposition to STAMP Data Center Plan

To whom it may concern,

I'm writing to state my opposition to the proposed STAMP data center as it infringes on the Tonawanda Seneca Nation's land, way of life, and the surrounding county's way of life. It is unjust for the people of this area to carry the environmental and economic burden while a private company profits.

Sincerely,
Ella Nasca

Subject: No data center please

Just emailing to voice that I'm opposed to the proposed data center for Alabama NY. This will undoubtedly have a negative effect on the citizens and wildlife in that area and beyond. Data centers are incredibly wasteful of precious resources and are not the future that myself and many others want. Thank you.

Subject: No data center!

The people of Western New York do not want land used for data centers! These centers have an immense negative environmental effect, strain the power grid and lead to higher utility costs for residents. They cause air, noise and light pollution that cause hearing loss, insomnia, asthma and decreased quality of life. A 2025 model suggested data centers could cause 600,000 asthma cases and 1,300 premature deaths by 2030. This area is in close proximity to a wildlife refuge, and these centers are known to threaten wildlife habitats with devastating consequences for an ecosystem. They do not contribute to the local economy with significant job growth and they take resources away from residents. These centers are not worth the long term health and environmental impact. I urge you to stop this construction before irreparable damage is done to this land and community. Let us learn from past mistakes- don't let this region suffer another Love Canal!

Subject: RE: Data Center

As a longtime resident of WNY and Tonawanda, I strongly oppose the data center.

Data centers consume immense local resources and create incredible amounts of pollution, including noise pollution, which would have a direct impact on both residents and wildlife in the area. The massive cooling fans, for example, create acoustic disruption which impacts wildlife protection and residents' rights to peaceful/quiet enjoyment. The National Wildlife Refuge and Oak Orchard are critical habitats for birds along an international bird flyway, and this data center would undoubtedly have catastrophic effects on these natural spaces and the countless plants and animals that depend on it. The light pollution would also negatively impact birds who navigate using the stars, as they are easily confused by industrial glow. If local water is planned to be used for cooling, it can raise the temperature of the runoff, which is a disaster for frog eggs and larvae.

I urge you to reconsider and deny the data center which would have a massive negative impact on residents as well as wildlife.

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Joanne Hubbard Cossa

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Eve Tuck

Subject: New Data Center

Please do not allow an AI data center to be built in Genesee county. As a former resident of Pembroke who has spent a lot of time exploring the parks and creeks and railways of this lovely county, the idea of building an AI data center - which destroy the local environments in which they are housed - is abhorrent to me. The environmental impact of such a monstrosity is devastating, and building one should be unthinkable for anyone who loves our beautiful wny environment.

Please look into how bad AI data centers are for the environment and please consider disallowing one to be built in our beautiful Genesee county.

Thank you for your time.

Sincerely,

Ms. River Belle

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Scott White

Not only is it a disgrace to treaty rights to threaten indigenous land with this water guzzling, environmentally harmful data center - but myself, my family and friends spend lots of time out at the wildlife refuge and WE DONT WANT THAT AREA DEVELOPED! stop trying! Enough is enough. DEC and NYS need to stand firm and protect this land and all that live in it.

Sincerely,

Sarah Klawinski

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: Data Centers

Hello,

I am writing as a concerned citizen of Western New York regarding the data centers next to the Iroquois National Wildlife Refuge and the Tonawanda Seneca Nation. I understand that these are being built with the hopes that it will create more jobs, but I am certain that this will only cause more harm than good.

Data centers such as these have a major impact on the environment. Noise and light pollution alone can disrupt the wildlife that is already competing for land.

Furthermore, the power used for these data centers can be used for more important things. The increased power consumption cost is going to be passed on to the people and businesses of West New York, which will have a rippling effect for costs all across the area.

Taxpayer money should not be used for things that will largely bring harm to the taxpayers. I am very disappointed that this is even being considered.

Thank you for your consideration,
Tyler

To: streampublichearing@gcedc.com; Press.RSVP@exec.ny.gov; Hope.Knight@esd.ny.gov
Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

streampublichearing@gcedc.com

Subject: Major Concerns Regarding Data Center Building

To whom it may concern,

New York State should be better than this. So far, the construction of data centers seems to threaten environmental pollution, noise pollution, and all negatives while holding no promise of any positives.

Is the point of a new data center to bring jobs to this area? After construction is done, what jobs will there be? The purpose of AI seems to be to take jobs away from living, breathing human beings for a far less functional output.

There's no proof of concept with AI. We just keep hearing it's inevitable. Who is deeming it inevitable? I've deactivated Microsoft CoPilot on my Outlook app three times this week already because I don't need AI to read my emails to me.

To hear a data center is being built in this community, threatening the environment and people around it, is despicable.

See below additional concerns:

Environmental Concerns: Critics cite threats to wetlands, potential disruption to local wildlife (including endangered species) near the Iroquois National Wildlife Refuge, and the high water and power consumption.

Cultural Concerns: The Tonawanda Seneca Nation has expressed that the site is on land central to their cultural heritage and immediately adjacent to their territory.

Enough harm has been caused to the Native American community since before the inception of the United States. If the Tonawanda Seneca Nation opposes this data center, we all should.

It's also my understanding that funds for this project are subsidized in part. Public subsidies should not fund corporate greed.

I am a very concerned citizen horrified for our present and future. Let the AI bubble burst. We will be better off in the long run.

Signed,
A WNY community member

Subject: Alabama Data Center

Hello, I am a resident of Niagara County.

Data Centers have been known to use obscene amounts of water, pollute the water, use a lot of electricity, drive up electric bills of surrounding residents, and cause significant noise pollution.

While Genesee County (and all of Western New York) could benefit from the proposed tax revenue, it's not worth it for the harm it can bring - especially without any contract for the community to halt the usage of the facility if they don't keep to their environmental promises.

I am sending this email to express my dissent for any and all Data Centers to be built in WNY.

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Subject: Data center

To whom it may concern,

Building this data center will cause irreparable damage to the environment, and will destroy indigenous land. This cannot happen. Please reconsider. For every 1 question asked to chat gpt, 6 fresh water bottles are dumped out. Our world is suffering. This cannot be brought to Genesee county.

I was at today's public hearing on the STREAM data center proposal at the Alabama Fire Hall. I have two observations:

First - there was such a wide swath of people in opposition: doctors, scientists, professors, indigenous people, clergy, representatives of organizations that work to protect our environmental resources, our water resources, the diversity and fragility of the eco-system, and 'just plain residents' of the nearby region. None of them spoke in favor of this proposal. No one wants it.
The only two voices in favor of the proposal came from union reps from Rochester. No one who lives here is in favor of the proposal.
You have heard it all -
utility rate increases
a ridiculous tax incentive to job production ratio
water pollution (a legal issue)
noise pollution (a legal issue)
destruction of habitat for endangered and threatened species (a legal issue)
encroachment on and degradation of treaty lands (a legal issue)
But my second observation is this: there was a new objection raised that, in an of itself, could be/should be a deal breaker, and that is the lack of adequate fire and emergency services in this small rural township. The person who spoke about the challenges of volunteer fire protection (and was just beginning to tick off the potential hazards before being cut off because she ran out of time) brought a new horror to the table. Think of the devastation caused all over the globe, the environmental disasters, when something goes wrong with our technology. God forbid there would ever be a fire at the proposed data center, but what if there were? Just the run-off from the water used to extinguish the fire would forever destroy the integrity of the surrounding wetlands.
Finally, this does feel like environmental racism.
Imagine that the GDEDC was trying to get the okay to build this monster data center directly adjacent to the Genesee Country Museum property. How far do you think you'd get with that?
Please - stop and think. Go back to the drawing board on this one and withdraw this wholly inappropriate proposal at this fragile site.

Sincerely,

streampublichearing@gcedc.com

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed — the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

· Reject the incentives application in the form of the requested **$1.46 billion**. **NYS would lose out on $716 million in sales taxes from this deal (in addition to $716 million in losses for Genesee County alone).** "Every time somebody doesn't have to pay their taxes, somebody else pays more," said state Sen. Liz Krueger, D-Manhattan, who's critical of large tax subsidy packages and has proposed a three-year moratorium on new data centers in New York.

The uncollected sales tax could do a lot of good for local governments in Genesee County. From the sales tax break:

· Genesee County would be out $606 million.

· The City of Batavia would be out $100 million.

Stream has also requested a $31 million mortgage tax break based on $3.1 billion it plans to borrow for the project.

That tax break would result in these revenue losses:

· The Town of Alabama: $12.5 million.

· Genesee County: $6.2 million.

· The Rochester Regional Transportation Authority: $6.2 million.

"It's a direct transfer of wealth from people of New York to the owners of these large corporations," said Tarczynska, the Good Jobs First researcher.

· I am outraged that the tax incentives result in a cost per job created of $11.7 million!

· It is also outrageous that GCEDC would receive a minimum of $145.9 million in fees from this deal. This is a clear conflict of interest for a decision maker;

· The April 8 SEQR application is grossly inadequate.

· Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

· Conduct a Supplemental EIS for the entire STAMP site, taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

The April 8 SEQR Full Environmental Assessment Form section D2b claims there will be no wetland impacts and yet in a March 31 2026 letter to C Abrams the NYSDEC states the entire parcels which the proposed 3 buildings are situated on as well as the surrounding parcels are jurisdictional wetlands, the majority of which are Class I, meaning it contains habitat that is utilized for an essential behavior of a species listed as endangered or threatened in Part 182 of this Title (§ 664.5 (a)(1)).

· Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC, and the State Historic Preservation Office on those impacts.

The April 8 SEQR Disadvantaged Communities Burden Assessment shows the entire STAMP site is at the center of a disadvantaged area, as defined by the Climate Leadership and Community Protection Act (CLCPA). However GCEDC does not take the process seriously and their report is an insult and does not look at any impacts to the sovereign nation next door.

· Conduct SEQR review that includes a detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that construction is forecast to take at least five years;

· Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, heat generated and water impacts be completed and made available to the public. Even if you think you can ignore wetland regulations, the hydrology and hydric soils are onsite and will impact your buildings;

· The data center would require 500 MW of electricity / year, enough to power 410,000 residential homes. It could power pretty much every home in Monroe, Genesee, Livingston, Orleans and Wyoming counties combined.

- The addition of 500 MW to the grid would add strain to an already strained electrical grid in NYS, leading both to more frequent brownouts and blackouts as well as the generation of additional air pollution burdens across the state.

- In the past 4 years our electricity rates have already doubled. Communities in Virginia and Texas have seen there rates triple after data centers were developed in those states.

- The Tonawanda Seneca Nation and its allies have extensively advocated to the New York Power Authority that no subsidized electricity should be awarded to tenants at STAMP. STREAM US Data Centers has indicated that the data center operator would be likely to apply for “high load factor power,” a subsidized source of electricity. Subsidized electricity represents a form of indirect subsidy to the (undisclosed) Big Tech operator

In addition

- Double Reed would maintain 12 onsite diesel generators and would store 114,000 gallons of diesel fuel per year onsite. Generators would produce emissions of 5,333 tons of Co2, as well as nitrous oxide and Hazardous Air Pollutant emissions.

· Genesee County faces a severe and ongoing insufficiency of both water and water infrastructure. The County has long struggled to adequately finance its Water Supply Project, which would bring up to 8 MGD daily of much needed water from Lake Ontario into the County via an agreement and infrastructural tie-ins with the Monroe County Water Authority.

- Now, GCEDC is trying to leverage this vulnerability by hinging the financing of Phase 3 of this project on fees paid into the infrastructure project by STREAM.

- GCEDC must not add additional vulnerability to Genesee County residents' and farms' access to adequate, safe drinking water by hinging critical financing for infrastructural upgrades on STREAM and Apollo: who don't care about the interests of Genesee County

· Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Finally, I reserve the right to submit further comments on the April 6 revised SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

The public doesn't actually need A.I. or cryptocurrency. These things may be fun and occasionally useful, but they are not essential to our future as a species or to the future of the planet. They are not critical to develop. They do not provide anywhere near as many jobs as they eliminate.

What we do need is cessation of ever-rising cost of living, a significant part of which are utility bills. So we

need drastically lower utility bills, not higher. We need a lot more high quality jobs, and we need protection of our constantly threatened ecosystem.

I don't care about these massive datacenter ventures. I don't need what they offer and I do not want them funded through the raising of my bills or the erosion of our upstate ecosystems. It isn't worth the sacrifices, not by a longshot.

It is an absurdity that the procedures in place make it so that these ventures are funded by ratepayers who never got a chance to vote on whether they even wanted them, much less wanted to pay for them. It's pretty much theft - coming at a time when nearly everyone is already hurting financially. We're being kicked when we're down - by a giant corporate robot with permission from the state.

Datacenters, hyperscale facilities, they are a massive sink both ecologically and economically. They are not inevitable, they are a choice. And I choose not to facilitate them.

Sincerely,

Sebastian Martin

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed — the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I am a retired state ecologist and spent a number of years working along the State Route 63 corridor in Genesee and Orleans county doing environmental assessments.

Stream confirms Bald Eagles are present within the proposed project site and yet suggests no bar to construction and no federal permitting will be required. The Bald and Golden Eagle Protection Act, 16 U.S.C.§ 668, however, generally prohibits activities that would disturb eagles or their habitats. Under the Act, the meaning of "disturb" includes "to agitate or bother a bald or golden eagle to a degree that causes, or is likely to cause... a decrease in its productivity, by substantially interfering with normal breeding, feeding, or sheltering behavior, or...nest abandonment, by substantially interfering with normal breeding, feeding, or sheltering behavior." 50 C.F.R. § 22.3. Here, STREAM proposes to spend five years constructing a towering, 2 million square foot data center complex within confirmed eagle habitat, less than a mile from the Iroquois National Wildlife Refuge, a federal refuge established to "serve[] as an inviolate sanctuary for migratory birds and support[] diverse species of wildlife"-- and to conduct operations for decades after that with unknown and unstudied impacts on eagles. On its face, the BGEPA prohibits this project.

In addition to bald eagles, over 140 bird species have been documented as using the STAMP/Data Center site, based on Cornell University data. These include State protected species such as the Short-eared Owl, Northern Harrier, Sharp-shinned Hawk, Cerulean Warbler, Horned Lark, Eastern Meadowlark, American Kestrel, Grasshopper Sparrow, and more. Based on Breeding Bird Atlas data, several species nest in this area including Horned Lark, Baltimore Oriole, and Northern Harrier, and Bobolink. STAMP also provides critical stopover habitat for long distance migrants such as the American Golden Plover, which flies up to 20,000 miles each year as it migrates from breeding grounds on the Arctic tundra of northern Canada and Alaska to the grasslands of southern South America and back again.

Documented onsite occurrences of Endangered Species include Heartleaf Plantain, Least Bittern, Short-eared owl, Northern Harrier, Bald eagle, Northern Long Eared Bat.

As many people have said many times, industrial development here is egregiously mis-sited. STAMP belongs to a 20,000 acre complex that includes Federal and State protected areas, along with the territory of the Tonawanda Seneca Nation. The Iroquois National Wildlife Refuge, located 5 miles away from the STAMP site, is home to multiple pairs of nesting Bald Eagles. Many additional protected species are found on the State Tonawanda Wildlife refuge a mile from the northern border of STAMP. The John White Wildlife Management area is directly across Route 63 from the southern campus of STAMP.

This part of the GLOW region represents the last major contiguous habitat block in Western NY, and one of the few remaining in the entire state, outside of the Adirondacks. Rather than sacrifice the land to a gigantic data center that benefits only a small group of wealthy shareholders, *we should be protecting it as a sanctuary and home* for remaining populations of wild plants and animals.

STAMP does not represent vacant land waiting to be developed with data centers or other facilities. It is next door to the sovereign Tonawanda Seneca Nation who's right to live a traditional life is protected by the 1794 Canandaigua Treaty. This land offers critical habitat for many species between Tonawanda Seneca Nation land and three State or Federally protected areas. For example, rare plants documented near the site include the Michigan lily (Endangered, NYS), heart leaf plantain (Threatened, NYS), and shellbark hickory (Threatened, NYS). We would lose these plants to development as habitats are urbanized and homogenized, taken over by monocultures of aggressive weeds such as common reed (*Phragmites australis*).

For reptiles and amphibians, the area is known to support Wood Frog, Blue-spotted Salamander (Species of Greatest Conservation Need, NYS), and Spring Peeper. Red-backed Salamander, American Toad, Leopard Frog, Green Frog, and Bullfrog also occur in the area. Habitat here may also provide summer homes for locally rare turtle species, such as the Spotted Turtle (Species of Greatest Conservation Need, NYS) and Blanding's Turtle (Threatened, NYS), both of which have been reported in the surrounding area.

For all the rare species I've listed, THE major threat is habitat loss. A gi-normous data center at this location would have permanently negative consequences by continuing to destroy habitat, and amid otherwise protected landscapes. **Specific impacts we can expect from this data center include:**

1) **Outright habitat destruction, fragmentation**. At 2 million square feet, the data center building alone covers almost 46 acres of land. Parking lots, roads, and other supporting infrastructure will exacerbate the loss. Such development would permanently shatter the ONE REMAINING contiguous large wild landscape in Western NY. We can also expect increased mortality of individual animals due to road kill (increase in traffic associated with industrialization).

2) **Water pollution**. Impacts will reverberate far beyond this 46 acre footprint. Stormwater runoff such as road salt and heavy metals in runoff from roofs and pavement will flow be in the direction of Tonawanda Seneca Nation and State WMA lands. Contaminated water will harm amphibian breeding sites, for example, since these vernal pool creatures are extremely sensitive to change in water chemistry.

3) **Light and noise pollution**. Continuous, 24/7 operation creates significant noise from cooling fans and HVAC systems, as well as light pollution, which can disrupt the behavior, reproduction, and migration patterns of nocturnal wildlife, birds, and insects. Noise and vibrations from construction or from the planned data center could interfere with frog chorusing, for example.

4) **Heat pollution**. Using a dataset of land surface temperatures produced by NASA, a research team led by the Department of Computer Science and Technology at the University of Cambridge found from 2004 to 2024, the surrounding areas of more than 6,000 data centers worldwide saw an average increased land temperature of about 3.6 degrees Fahrenheit. In certain cases, nearby temperatures increased 6.4 degrees Fahrenheit. Researchers calculated these heat islands could be felt about 6.2 miles away from facilities. Additional heat combined with drought and light and noise pollution can harm many protected species used as medicine by the Tonawanda Nation.

5) **Power Infrastructure:** The high electricity demand of data centers sucks power from the grid, and involves the expansion of high-voltage transmission lines, which can fragment habitats and impact species like the Short-eared Owl.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

Finally, I reserve the right to submit further comments on the April 6 revised SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

streampublichearing@gcedc.com

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Devon Hourihan

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed — the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to consider the financial impacts this project will have on citizens of Western New York.

· The data center would require 500 MW of electricity / year, enough to power 410,000 residential homes. It could power pretty much every home in Monroe, Genesee, Livingston, Orleans and Wyoming counties combined. This is approximately four times the total generation capacity currently operating in Genesee County (122 MW).

· The addition of 500 MW to the grid would add strain to an already strained electrical grid in NYS, leading both to more frequent brownouts and blackouts as well as the generation of additional air pollution burdens across the state.

· In the past 4 years our electricity rates have already doubled. Communities in Virginia and Texas have seen their rates triple after data centers were developed in those states.

· While GCEDC claims that STAMP will utilize "green" energy, the 345 kV transmission line that would provide power to the substation includes a mixture of energy sources, including hydropower from the Niagara River but also fossil fuel produced energy.

· The Tonawanda Seneca Nation and its allies have extensively advocated to the New York Power Authority that no subsidized electricity should be awarded to tenants at STAMP. STREAM US Data Centers has indicated that the data center operator would be likely to apply for "high load factor power," a subsidized source of electricity. Subsidized electricity represents a form of indirect subsidy to the (undisclosed) Big Tech operator.

· Finally, I reserve the right to submit further comments on the April 6 revised SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Subject: no data center

Dear GCEDC,
Reconsider the real effects on the animals, plants and people of the area if you allow a huge energy guzzler data center to come into your development!! The massive amounts of water consumed would be a major detriment to the surrounding area. Robbing the water and demanding so much electricity are not for the good. We can not afford to be so careless with the environment and the cost of the huge amounts of electricity required will hurt everyone in the end. Quality of life is more important. "Progress" must be considered responsibly. Profits can ruin us in the end. STOP

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Paul Fath

Subject: Data center in Alabama

Please do not allow this data center to be built. The findings nationwide are clear that data centers raise energy rates significantly for surrounding areas, and 125 jobs is absolutely not enough to compensate for the significant tax breaks/incentives. Youll allow irreparable damage to the nature preserve next to the proposed site, and it will ultimately lead to people being voted out, as these centers are proven to be bad for the community. I hope you'll all do the right thing and block this construction.

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

This data center project is a major problem for the county and all of New York State. It will destroy a fabulous natural environment, drain electricity from the area and cost a tremendous amount of money that should be used for citizens welfare. New York does NOT need this!

Sincerely,

Gail A Brownell

It is time New York chooses the PEOPLE and LAND over corporations & profit.

I have lived in New York State for over 30 years. I love this state. I care about the well being of our community. I respect a person's desire for a peaceful and safe environment. I care about the resources we have and do not wish to drain them into a data center.

A STAMP data center ANYWHERE in New York is a resounding NO from me.

Sincerely,

Bek Sickler

Subject: Proposed datacenter

To whom it may concern,

I'm submitting my feedback to the proposed STAMP datacenter via this e-mail. I'm a resident of Erie County and whether or not you want to believe it, your proposed datacenter will negatively impact the residents of surrounding counties like mine. I have decades of professional experience in the IT industry and I can confidently say building this datacenter and bringing it online will be wasteful and harmful to residents *but also to the government officials who vote in favor of it.* If you're curious to see examples of what will happen if this moves forward, see my links below. Not only is there a 50/50 chance the entire thing will fall apart, there's a significant chance those who approve it will be thrown out of their jobs. I am opposed to this project and I strongly encourage you to abandon it, no matter the amount of money involved.

Almost Half of US Data Centers That Were Supposed to Open This Year Slated to Be Canceled or Delayed

Subject: STREAM Data Center

To whom it may concern,

I am a resident of Erie County, and I do not want this data center being built in my region. Data centers are poisonous not only to residents by causing pollution of drinking water, but they also accelerate climate change, disrupt the surrounding ecology, and damage wildlife. It also accelerates the AI arms race that is causing rampant misinformation and damage to our social fabric. I do not approve of this data center being built and am firmly condemning moving forward with this project.

I grew up in the town of Batavia and lived in Alabama less than a mile from the proposed data center site. The Iroquois National Wildlife Refuge has been one of the most precious and largest natural sanctuaries of Western New York, being even more critical in that it is a marshland which is home a great diversity of

species than places without marshland. On top of that this data center will be directly adjacent to the Tonawanda Seneca Nation, our friends, neighbors, and historically mistreated original Americans. The Data Center proposed directly on the edge of both of these historically and ecologically critical landscapes is shameful, short-sighted, and detrimental to our community. It reminds me of the "Buffalo Billion" which the lion's share went to the Tesla factory in Buffalo and never delivered on any of the promises because it was part of multiple corrupt dealings and now the CEO of Tesla actively works to undermine our elections. The noise of the data center will disturb the wildlife as well as the pollution during both construction and use. If you don't believe me take a look at the aluminum runoff that would enter the wildlife preserve from construction as well as the likelihood of losing marshland from blasting or water use just like it did in Wisconsin.

https://www.wkow.com/news/creek-concerns-near-meta-data-center-site-in-beaver-dam/article_61f4985b-afb7-4b58-a08e-2cf008f41aad.html

Can we finally stop these multi-billion dollar corrupt dealings that destroy our natural landscape that only benefit established Democratic and Republican leadership while the quality of life for all species and residents continues to decline? Thank you.

Sincerely,

Matthew Johnson

Subject: Data Center

As a lifelong Rochester resident, I am strongly opposed to the establishment of a data center in Genesee County. The creation of 120 jobs does not even come close to justifying the negative community and environmental impacts. The proposed site is far too close to a precious wildlife preserve that would be subject to 4+ years of disruptive construction, not to mention the noise and water pollution it will create.

While the project may generate 0.5bn in tax revenue, it relies on nearly 3x that much in tax breaks of 1.4bn to even launch the project.

It is clear that local constituents do NOT support this initiative and that the risks and costs far outweigh the potential benefits.

Thank you for your consideration.

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Philip Ratzel

To: Genesee County Economic Development Center (GCEDC)
From: WE ACT for Environmental Justice

To Whom It May Concern:

WE ACT for Environmental Justice is a Northern Manhattan-based, membership-driven organization whose mission is to build healthy communities by ensuring that people of color and/or low-income residents are meaningfully included in the development of sound and fair environmental health and protection policies and practices.

WE ACT for Environmental Justice (WE ACT) submits the following comments to the public record in support of the Tonawanda Seneca Nation, who reside within a designated Disadvantaged Community as determined by the Climate Justice Working Group under the Climate Leadership and Community Protection Act. Under BUFA - Project Double Reed, STREAM US Data Centers have proposed a large data center at the STAMP mega industrial site in Alabama, NY, which poses a significant threat to the health and well-being of the people of the Tonawanda Seneca Nation.

The rapid and exponential growth of data centers risks perpetuating historical patterns of environmental injustice by worsening the affordability crisis, and threatening the health and safety of communities of color and low-income communities. Data center operation contributes to increasing electricity rates, puts pressure on limited water resources, and generates pollution that causes increasing climate and public health burdens.

In addition, WE ACT believes that siting, construction, and operation of data centers must follow these principles:

1) Avoid or mitigate health, economic, and cultural impacts while creating local, sustainable jobs, and supporting economic development.
2) Utilize renewable energy, phase out polluting fossil fuel infrastructure that undermines climate and public health.
3) Operate compatibly with local environmental resources, minimizing stress on the environment and public health.

This project proposal does not meet these principles. We echo the concerns of the Tonawanda Seneca Nation and submit the following comments pursuant to the just implementation of the Climate Leadership and Community Protection Act and Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts;

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that construction is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public; and

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

In conclusion, we stand in support of the concerns of the Tonawanda Seneca Nation and oppose the financial incentives request submitted by STREAM US Data Centers, demand that GCEDC follow all of DEC's recommendations with respect to the SEQR environmental review process, and call on GCEDC to reject the incentives application from STREAM US Data Centers.

Sincerely,

Lonnie J. Portis

Subject: NO to AI Data Center

I live in the Western New York area and think an AI Data center is a terrible idea for this area. It would encroach on the beautiful wildlife and nature we have in the greater Buffalo region. It would drain our municipal water, and the noise/light pollution would mess with wildlife. I understand the money of it all but PLEASE consider the effects on our future and the future of WNY.

Subject: Comment to GCEDC Re: Proposed STREAM data center

Good afternoon,

I'm writing to voice my opposition to the STREAM data center. I've lived in WNY for over 40 years, and I'm concerned about the seizure and pollution of our fresh water supply, the disruption to local wildlife, and massive amount of frustrating noise and light pollution this data center would cause.

I'm also concerned that the Tonawanda Seneca Nation has expressed that the site of this data center is on land central to their cultural heritage and immediately adjacent to their territory. The noise and pollution will be a huge disruption for these people.

These are disastrous outcomes for WNY, and as a lifelong resident I behoove the committee to reconsider building this center. It sounds like it will do much more harm than good, and will cost more in the long run than it brings in.

Thank you for your time.

Best,

Jessica Reigelman

To Whom It May Concern,

I am submitting this comment in opposition to the proposed Stream Data Centers facility at STAMP.

This project asks Genesee County residents to accept $1.46 billion in public subsidies — forfeiting over $700 million in tax revenue — in exchange for 125 permanent jobs. That is $11.7 million per job. By any measure of responsible economic development, that figure should end the conversation.

It doesn't.

The same proposal would consume 500 megawatts of electricity — 83% of all power capacity at STAMP — enough to power every home in Monroe, Genesee, Livingston, Orleans, and Wyoming counties combined. Independent energy analysts have warned this scale of demand, added to an already strained New York grid, will drive up electricity rates for every resident in the state. The people of Genesee County would subsidize the project twice: once through forgone taxes, and again on their monthly power bills.

The facility would sit adjacent to the Iroquois National Wildlife Refuge and Tonawanda Seneca Nation territory — a Nation that has not been meaningfully consulted and has described this project as an existential threat to their community and way of life.

An independent review by the Applied Economics Clinic found Stream's own cost-benefit analysis lacks the documentation required for sound public-sector decision-making. We are being asked to commit billions in public resources to a project whose financial justification does not meet basic scrutiny, for a tenant that has not even been publicly named.

This is not a close call. I urge the board to reject this proposal.

Comments Regarding STREAM's Proposed Data Center

Author: Bryndis Woods, PhD

Date: April 9, 2026

Executive Summary

In January 2026, STREAM U.S. Data Centers, LLC (STREAM) applied to the Genesee County Economic Development Center to construct a 2.2 million square-foot data center campus in the Town of Alabama, New York, located in Genesee County. On behalf of Tonawanda Seneca Nation and Sierra Club Niagara Group, these comments address STREAM's proposed data center, including its claimed costs and benefits for the local community.

Key findings include:

- The project would require 500 megawatts (MW) of electricity, approximately four times the total generation capacity currently operating in Genesee County (122 MW).
- STREAM does not provide any supporting materials for its cost-benefit analysis (CBA), which fails to meet standards expected in a public decision-making process and is insufficient to determine whether the proposed project would provide net benefits for the local community.
- STREAM's CBA results differ substantially from one CBA to the next: total costs increased from $472 million to $781 million to $1.4 billion, and total benefits vary from $1.2 billion to $2.6 billion.
- STREAM has failed to address potential costs associated with the project, including: effects on property values, effects on tourism and recreation, utility bill impacts, public health impacts, the cost of public infrastructure required for the project, or the local disturbances associated with project development such as placing cables and fiber optic lines.
- STREAM's job creation estimates exceed values found in publicly available data and information, average publicly available estimates indicate that the proposed project would create about 4,100 fewer direct temporary jobs than the Company claims, and 1,300 fewer indirect temporary jobs than the Company claims.
- STREAM has requested a local sales tax abatement and mortgage recording tax abatement, which—taken together—are worth 25 times more than the benefits provided by the proposed PILOT/Host payments.
- Valuing data centers is challenging and complex: if STREAM's proposed data center's assessed property value is incorrect, that would impact the ratio of the Company's PILOT/Host payments relative to their waived property taxes.
- STREAM's proposed data center is near the Tonawanda Seneca Nation's ancestral forest The Big Woods, Iroquois National Wildlife Refuge, the Tonawanda Wildlife Management Area, and the Oak Orchard Wildlife Management Area and may negatively impact local tourism and recreation, which are an integral part of the community and economy.

Introduction

The United States is the world's largest data center market and data centers are expected to continue to grow rapidly with impacts for communities all around the nation.[1] As data centers have grown, more communities are grappling with what it means to have a data center for a neighbor, and public opposition has grown. According to a research report from Data Center Watch—a firm tracking data center opposition—data center developments worth a combined $64 billion were either blocked or delayed between May 2024 and March 2025, due, at least in part, to local opposition efforts.[2] The report also found that opposition to data centers "cuts across political lines…and marks a rare area of bipartisan alignment in infrastructure politics."[3] According to The Brookings Institution's research summary of America's Rural Future virtual symposium, which "examined the local implications of AI and data center development for rural communities across the United States," rural community representatives emphasized the importance of "trusted information, transparency, fairness, clear guidelines, and governance capacity to ensure inclusive processes that advance community interests" including by establishing "clear, measurable local benefits."[4] Here, it is important to note that STREAM has not disclosed who the tenant of the data center campus will be, nor has it disclosed how various costs and benefits will be allocated between STREAM and the tenant, despite acknowledging that such allocations exist.[5]

Common concerns among local communities where data center developments are proposed include higher utility bills, water consumption, noise, and impacts on property values and green spaces.[6] The remainder of these comments address all those concerns, except higher utility bills for which detailed quantitative analysis is recommended. The timeline of the proposed data center development at issue in these comments did not permit assessment of the project's potential impact on utility rates and bills. However, it is important to note that in the three states with the highest concentration of data centers—Illinois, Virginia and Ohio—electric bills were 16, 13 and 12 percent higher in August 2025 (respectively) than a year prior, more than double the national average electric bill increase.[7] Across the country, electric bills have been increasing faster than inflation—the increases were more than double the rate of inflation in 2025—and data center developments are important to understanding why. Their high energy demand, the cost of new electric infrastructure they require, and ongoing electric maintenance costs are all costs

shared across all electric customers in the same utility service area.[8] According to a Bloomberg News analysis from 2025, areas near new data centers saw an increase in electricity costs of as much as 267 percent compared to 2020.[9]

On behalf of Tonawanda Seneca Nation and Sierra Club Niagara Group, these Applied Economics Clinic comments address STREAM's proposed data center, including its claimed costs and benefits for the local community. We determine that the materials the Company has provided are incomplete and insufficient to determine whether the proposed project would provide net benefits for the local community. Finally, we highlight three potential costs that are omitted from the Company's materials: lower-than-claimed local job creation, effects on property values, and effects on tourism and recreation. We would like to emphasize that these three costs are not comprehensive of all the costs from the proposed data center that ought to be considered. Additional potential costs include effects on utility bills (as discussed above) and effects on public health (due to the emissions from on-site diesel-fired backup generators).[10]

About STREAM's proposed data center

In January 2026, STREAM U.S. Data Centers, LLC (STREAM or The Company) applied to the Genesee County Economic Development Center (GCEDC)—a public agency that offers tax breaks and other economic incentives to attract private business—to construct a 2.2 million square-foot data center campus at the Western New York Science & Technology Advanced Manufacturing Park (STAMP) in the Town of Alabama, New York. STREAM's parent company is Apollo Global Management (Apollo), one of the world's largest private equity firms reporting assets worth about $450 billion in September 2025.[11] (Apollo is being sued by its shareholders in a proposed class action for "allegedly defrauding them for nearly five years about [Apollo's] business dealings with disgraced sex offender and financier Jeffrey Epstein").[12] The proposed

[9] Saul, J., Nicoletti, L., Pogkas, D., Bass, D., Malik, N. September 29, 2025. "AI Data Centers Are Sending Power Bills Soaring." Bloomberg. Available at: https://www.bloomberg.com/graphics/2025-ai-data-centers-electricity-prices/?embedded-checkout=true

[10] Because data centers need to operate 24/7, 365 days a year, they need backup power during grid outages. To ensure this power is available when needed, data centers have backup diesel generators that are tested at least once a month. See: https://www.eesi.org/articles/view/communities-are-raising-noise-pollution-concernsabout-data-centers. Diesel generators produce local air pollution, including particulate matter and NOx [nitrogen oxides], "which impacts growing lungs of children, can add cases of asthma, and can exacerbate heart disease and other underlying diseases in the elderly." See: https://www.lincolninst.edu/publications/land-lines-magazine/articles/land-water-impacts-data-centers/.

data center campus includes three, two-story buildings on a 90-acre footprint. An additional 40 acres will be "utilized as temporary construction logistics areas in support of the project."[13] The project would require 500 megawatts (MW) of electricity, which is approximately four times the total generation capacity currently operating in Genesee County (122 MW).[14]

The Town of Alabama is in Genesee County, between Buffalo and Rochester, sits on approximately 28,500 acres, and has a population of approximately 1,800 with a median household income of $64,000. About 5,700 acres within the Town's borders is sovereign land of the Tonawanda Seneca Nation, and the proposed project site borders the Tonawanda Seneca Nation's ancestral forest, The Big Woods (see Figure 1).[15] Several wildlife preserves occupy much of the Town's land, including the Iroquois National Wildlife Refuge, the Tonawanda Wildlife Management Area, and the Oak Orchard Wildlife Management Area.[16]

STREAM's claimed costs and benefits

According to STREAM's most recent project application, the total cost of the project is estimated at $19.5 billion: an $8.3 billion increase from the previous version of the Company's application filed just one month prior,[17] and a $13.2 billion increase from the Company's original application filed in early 2025 (see Figure 2 below).[18] (Note: the Company's 2025 application was withdrawn after the Tonawanda Seneca Nation and Sierra Club filed a lawsuit with the New York State Supreme Court that alleged that GCEDC violated state law by failing to conduct a full environmental review.[19]) The Company's estimated total costs include: 1) construction costs; 2) costs to purchase the land; 3) building costs including engineering costs, architect costs, and blueprint fees; and 4) other equipment costs, including computers, furniture, etc.[20]

Figure 2. STREAM data center estimated total cost (billions $)

[20] Genesee County Economic Development Center. February 27, 2026. *Application for Financial Assistance.*

As part of its application, STREAM contracted with a third-party (MRB Group) to conduct a series of cost-benefit analyses (CBA) of the proposed project, comparing the project's expected costs with its expected benefits.[21] The costs reflected in the Company's CBA are tax exemptions (see Table 2 below). The Company's March 2026 CBA report notes that STREAM "will be submitting a separate economic impact study based on industry experience," but no such study has been made available on GCEDC's project website yet.[22]

Three CBAs have been submitted by the Company: the first in February 2025, the second in January 2026, and the third in March 2026. All three CBAs claim that STREAM's benefits will outweigh the limited costs included in the studies:

- The February 2025 CBA concluded that local benefits would outweigh costs 5-to-1,
- The January 2026 CBA concluded that local benefits would outweigh costs 7-to-1, and
- The March 2026 CBA concluded that local benefits would outweigh costs 3-to-1.

The most recent (March 2026) CBA maintains that benefits stem from: 1) new wages from job creation; 2) new revenues to municipalities and schools from Payment in Lieu of Tax (PILOT)[23]/Host payments; 3) new sales tax revenue from the project's electrical usage; 4) new revenues to the Town of Alabama Fire District due to annual fire district fees; 5) Company investments in electrical infrastructure needed to support the project; and 6) project fees being reinvested by GCEDC to support projects that benefit Genesee County.[24] Only some of these benefits are monetized in the BCA analyses performed by the Company (see Table 1). It is important to note that the Company maintains that investments in electrical infrastructure needed to support the project is a benefit for the local community, but the primary beneficiary of additional electrical infrastructure required for the project is STREAM itself, not the local community that hosts said infrastructure.

All three studies fail to include key potential costs to the local community, such as higher utility bills, impacts of increased water consumption, noise pollution, impacts on property values, effects on green spaces, the cost of public infrastructure required for the project, or the local disturbances associated with project development such as placing cables and fiber optic lines.

STREAM's CBA results differ substantially from one CBA to the next: total costs increased from $472 million to $781 million to $1.4 billion. Total benefits also varied considerably: from $1.2 billion to $2.6 billion to $2.2 billion (see Table 2). Even though total estimated benefits fell between the January 2026 CBA and the March 2026 CBA, two benefit categories increased substantially: sales tax revenue, which increased by $190 million, and other municipal revenue, which increased by $259 million.

[22] Stream US Data Centers Project - Cost Benefit Calculator. March 2026. PDF page 3.
[23] PILOT payments are agreements—some are legally mandated and others are voluntary—that can help communities recoup lost revenue that is a result of state property tax exemptions.
[24] Stream US Data Centers Project - Cost Benefit Calculator. March 2026.

Table 1. Benefits included in the Company's BCA analyses

Company's Claimed Benefits	February 2025 BCA	January 2026 BCA	March 2026 BCA
1) New wages from job creation	Yes	Yes	Yes
2) New revenues to municipalities and schools from Payment in Lieu of Tax (PILOT) /Host payments	No	Yes	Yes
3) New sales tax revenue from the project's electrical usage	Yes	Yes	Yes
4) New revenues to the Town of Alabama Fire District due to annual fire district fees	No	No	Yes
5) Company investments in electrical infrastructure needed to support the project	No	No	No
6) Project fees being reinvested by GCEDC to support projects that benefit Genesee County	No	No	No

Data sources: 1) STREAM Cost Benefit Calculator, February 2025; 2) STREAM Cost Benefit Calculator, February 2026; 3) STREAM Cost Benefit Calculator, March 2026.

Table 2. Comparison of Company's CBA analyses (millions $)

		February 2025 BCA	January 2026 BCA	March 2026 BCA	Jan 2026 to Mar 2026 Comparison
Costs	Property Tax Exemption	$0	-$20	-$58	-$39
	Sales Tax Exemption	$463	$769	$1,432	$662
	Mortgage Recording Tax Exemption	$9	$31	$31	$0
	TOTAL	**$472**	**$781**	**$1,405**	**$624**
Benefits	Payroll	$874	$1,979	$1,139	-$840
	Property Tax Revenue	$103	$207	$206	-$1
	Sales Tax Revenue	$12	$28	$218	$190
	Income Tax Revenue	$134	$89	$51	-$38
	Other Municipal Revenue	$82	$345	$604	$259
	TOTAL	**$1,205**	**$2,647**	**$2,217**	**-$430**

Data sources: 1) STREAM Cost Benefit Calculator, February 2025; 2) STREAM Cost Benefit Calculator, February 2026; 3) STREAM Cost Benefit Calculator, March 2026.

One of the primary benefits of the project touted by the Company (and represented in publicly available information regarding the costs and benefits of data centers[25]) are STREAM's PILOT/Host payments to Genesee County, the Town of Alabama and the Oakfield-Alabama School District. STREAM notes that it has "agreed to pay $7 million in base annual PILOT/Host payments," which will total "more than $283.9 million in new revenue over 30 years"—$84.8 million more than what their waived property taxes would have

[25] See, for example: 1) S&P Global. Available at: March 24, 2026. "Everywhere, All At Once: How The Growth Of Data Centers Could Carry Risks For U.S. Local Governments." Available at: https://www.spglobal.com/ratings/en/regulatory/article/everywhere-all-at-once-how-the-growth-of-data-centers-could-carry-risks-for-us-local-governments-s101673051; 2) Gorey, J. October 17, 2025. "Data Drain: The Land and Water Impacts of the AI Boom." Lincoln Institute of Land Policy.

been over the same period (or $58.3 million on a discounted basis).[26] This benefit is actually included as a negative cost line item in the Company's BCA (see the "property tax exemption" line in Table 2).

However, the Company has also requested a local sales tax abatement of 4 percent, which amounts to a $1.4 billion cost in the Company's most recent CBA ($662 million more than the same cost line item in the Company's January 2026 CBA). STREAM has also requested a 0.5 percent abatement of the mortgage recording tax, which amounts to a $31 million cost in both 2026 versions of the CBA.[27] Taken together, these two costs are **25 times greater** than the benefits provided by the PILOT/Host payments.

STREAM's CBAs are insufficient to determine the true costs and benefits of the proposed project

The CBA results provided by STREAM are incomplete and insufficient to determine whether the proposed project would provide net benefits for the local community for multiple reasons. Key concerns with STREAM's CBA analyses include:

- **Lack of supporting materials:** The Company does not provide supporting materials to demonstrate the costs or benefits of the project. For example, STREAM fails to provide materials that support the Company's assertion that the project will create 6,000 temporary construction jobs over five years. This failure to provide support materials does not meet the standards expected in a public decision-making process.
- **Significant changes in cost and benefit line items without explanation:** The Company's CBA analysis and results changed significantly between each version of the CBA, but the Company has not provided any explanation regarding the reasons for those changes. For example, the Company fails to explain why the March 2026 CBA included a new benefit line item—"ongoing sales tax revenue on electricity," a benefit valued at $201.6 million—that was not included in the January 2026 CBA.
- **Inflated job benefits:** The Company's job creation estimates exceed values found in publicly available data and information. The Company anticipates that the project will create 7,766 direct and indirect temporary jobs and 223 direct and indirect permanent jobs, and makes payroll benefit estimates on that basis. However, the U.S. Chamber of Commerce Technology Engagement Center has found that a "typical large data center" creates many fewer jobs: approximately 1,700 direct and indirect temporary jobs and 157 direct and indirect ongoing jobs.[28] Similarly, The Brookings Institution determined that "even in large-scale centers, construction jobs often total around 1,500 skilled trade workers and 100 operational jobs."[29]

[26] Stream US Data Centers Project - Cost Benefit Calculator. March 2026.
[27] Stream US Data Centers Project - Cost Benefit Calculator. March 2026.
[28] U.S. Chamber of Commerce Technology Engagement Center. 2017. *Data Centers – Jobs and Opportunities in Communities Nationwide.* Available at: https://www.uschamber.com/assets/documents/ctec_datacenterrpt_lowres.pdf. Page 11.
[29] Lee, N. T., West, D. M. November 5, 2025. "The future of data centers." Brookings.

- **Missing costs:** All three of the Company's CBA analyses fail to include any costs beyond sales and mortgage tax exemptions (property tax exemptions are listed as a cost line item, but are negative, meaning they reflect the projected benefit of PILOT/Host payments as described above). The Company has failed to identify or assess various potential costs associated with the project, including: effects on property values, effects on tourism and recreation, costs associated with air pollution from the proposed facility's backup diesel generators, utility bill impacts, public health impacts, the cost of public infrastructure required for the project, or the local disturbances associated with project development such as placing cables and fiber optic lines.

STREAM's provision of comprehensive information regarding the anticipated costs and benefits of the proposed project to ensure that local communities—including Town of Alabama residents and the Tonawanda Seneca Nation—is essential to good public decision making and to making sure impacted communities have an accurate understanding of the costs and other risks to which they are exposed. The remainder of these written comments describe potential costs of the proposed project that the Company has omitted in its CBA analyses or its various application materials to date.

Costs omitted (and benefits inflated) in STREAM's CBA

All three of STREAM's CBA studies failed to include key project costs, such as capital costs like construction costs or equipment costs, as well as other potential costs of the project, such as higher utility bills, impacts of increased water consumption, costs associated with air pollution from the proposed facility's backup diesel generators, noise pollution, impacts on property values, or effects on green spaces, tourism, and/or recreation. Given the limited timeline in which to produce these comments ahead of key decision-making regarding the proposed project, these comments address two potential costs that the Company failed to consider—effects on property values and effects on tourism and recreation—and provide a revised estimate of the Company's claimed job creation benefit.

Effects on local employment

STREAM's job creation estimates exceed values found in publicly available data and information. The Brookings Institute has found that the "employment benefits of data centers are variable and often overstated," and highlights the need—particularly in rural communities—to focus on job quality, duration, and how to make new positions attainable for residents.[30] There is broad consensus that the primary local benefit of data centers is tax revenue and PILOT payments because data centers do not create many permanent jobs and the temporary jobs created during their construction phase are of limited benefit to local communities.[31]

AEC reviewed publicly available literature regarding data center job creation estimates, which is summarized in Table 3 below. STREAM estimates that the proposed project will create 12 direct,

temporary jobs per megawatt (MW) and 3.5 indirect, temporary jobs per MW—estimates that are much higher than other publicly available values from the literature. In recent studies of data center job creation, direct, temporary job creation estimates range from 0.7 to 6.4 jobs per MW and indirect, temporary job creation ranges from 0.4 to 1.6 jobs per MW.

Table 3. Data center job creation estimates (jobs per MW)

Available at: https://www.rowanfrederick.com/faqs.

If STREAM's temporary job creation estimates are corrected to reflect average publicly available estimates, the proposed project would create 1,898 direct temporary jobs (about 4,100 fewer than the Company claims) and 452 indirect temporary jobs (about 1,300 fewer than the Company claims). STREAM also estimates that the proposed project will create 0.3 direct, ongoing jobs per MW and 0.1 indirect, ongoing jobs per MW: These estimates are more in line with other publicly available estimates from the literature. It is important to note that permanent jobs are usually of greater benefit for local populations than temporary jobs, though STREAM has not provided any information about ensuring that job creation benefits local populations specifically.

According to the Company's most recent BCA analysis, STREAM will receive $1.4 billion in tax exemptions from GCEDC. If the Company's ongoing job creation estimates are correct, STREAM would be given an astounding $8.3 million in tax breaks per direct, ongoing job created. Across all of the publicly available data and information reviewed, experts broadly agree that data centers do not require many employees once they are built, with The Brookings Institution noting that is because they "largely consist of file servers and networking equipment," which means that "other community benefits may be more salient for

regions expanding their data center footprint."[32]

Effects on property values

Based on a review of publicly available information, the effect of data centers on property values does not appear to be uniformly negative or positive—the answer to "how will a new data center impact the property values of the residents who live near it?" is, ultimately, "it depends." In high-growth real estate markets, home prices have continued to rise despite new data centers coming online nearby.[33] However, potential buyers consider home prices along with other factors, such as utility costs, light pollution, and ambient noise, when deciding whether a community is attractive.[34] In addition, rising property values can price out first-time home buyers and can be negative for longtime and/or lower-income homeowners due to rising property taxes.[35] Ultimately, the proximity of a data center to one's home—and the buffers that exist between it and the community, such as noise mitigation and landscaping—is the most important variable in terms of its effect on property value and attracting potential buyers.[36]

In addition, evidence suggests that the methods used to assess the property value of data centers themselves are inconsistent across jurisdictions, and that assessors often lack the specialized expertise in data center valuation needed to assess their fair market value effectively. For example, the value of data centers is derived from more than the land they sit on—data centers require extensive electric and cooling infrastructure to operate as well as extensive and valuable technological equipment. However, the speed at which technology becomes obsolete calls for rapid depreciation of specialized technological equipment, which should be considered separately from the value of real estate.[37] While technological equipment can be removed and, therefore, considered separately from the value of the real estate, some of the infrastructure needed to operate a data center is integrated into the building in such a way that removing it is cost-prohibitive or impossible.[38] These complexities pose valuation challenges that require a more nuanced, specialized valuation approach. It is important to note that—if STREAM's proposed data center's assessed property value is incorrect—that would impact the ratio of the Company's PILOT/Host payments

relative to their waived property taxes.

Effects on tourism and recreation

In Genesee County, tourism and recreation are an integral part of the community and economy: STREAM's proposed data center borders the Tonawanda Seneca Nation's ancestral forest, The Big Woods, and is in close proximity to various wildlife preserves, including the Iroquois National Wildlife Refuge, the Tonawanda Wildlife Management Area, and the Oak Orchard Wildlife Management Area.[39] Empire State Development of New York State's *2024 Tourism Economics Report* found that, in Genesee County, visitors spent $144.5 million in 2024, generating about $331.1 million in direct personal income for county residents, creating about 11,000 direct jobs and about 5,000 indirect jobs, and generating $8.8 million in local tax revenue—equal to $665 in tax savings per household.[40] It is crucially important to understand that STREAM's proposed data center may negatively impact local tourism and recreation—for example, the project could diminish local water bodies like the Oak Orchard Creek or Tonawanda Creek, and create noise and/or light pollution that permeates into local wildlife preserves. As with so many other communities where proposed data centers are to be located, Tonawanda Seneca Nation fear STREAM's proposed data center "could harm the old-growth forest they rely on for medicinal plants and hunting, primarily due to 24/7 lights and noise emitting from the facility."[41] In July 2025, the County of Orleans Department of Tourism (Orleans County is located directly north of Genesee County) prepared a statement at a community meeting regarding the proposed data center that detailed their concerns regarding the impact of the proposed data center on the Oak Orchard River and the impacts that would create for Lake Ontario and associated tributary waters, noting that "the good health and non-impacted water of the Oak Orchard River is vitally important to the fishery and boating interests which support the tourism economy for Orleans County."[42]

Subject: We are against this data center

Hello. I am one of the many citizens living close to Genesee county. Choosing to build at data center is going to be a major mistake.

Data centers do not benefit us. These centers take clean drinking water and make it unusable. It takes habitats away from our wild life and potential homes from our citizens.

Instead of using $19.4B to fund something that harms the community, use it for good. Fund schools, feed the homeless, pay for colleges. There is so much you can do.

Artificial intelligence is going downhill and fast. Everyone is recognizing the harm it does compared to good. It's stealing jobs, stealing water, and has even resulted deaths.

Please, I am only eighteen years old and I can recognize this is wrong. For the sake of the community, please don't do this. Make the right choice and discard any plan to build the data center.

Sincerely,
Felix

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Natalia DeBorst

Subject: Buffalo Data Center comments

Data centers are storage spaces for AI that require lots of electricity to power the servers and water to keep them cool. They do NOT create jobs. They drain resources and defer the cost to the residents while getting massive tax breaks (this particular venture would be $1.46 billion in tax breaks and subsidies).

It's a know fact that these center SIGNIFICANTLY NEGATIVELY AFFECT human quality of life.

Not just the constant noise, report have been maid the emit frequencies that make people ill, pollute our water and will significantly hike our water prices.. New York must not subsidize water and energy to these tech BILLIONAIRES.

New York city is the most expensive city in America.. most are already struggling, why further put this burned on us? This will definitely will be on citizen's minds when voting times come... or, by the way americans are getting tired of being exploited by the top 000001% , here in NYC it may risk to see the same fate as the current sentiment across America and go up in flames. DO NOT INCITE VIOLENCE. PLEASE DO Not approve this. NEW YORKERS do not want this and they do not forget.

Sincerely,

Caro De Los Santos

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

I am writing in opposition to the proposed data center complex at the STAMP site. From everything I've read and as a person who has enjoyed birding, kayaking, hiking and skiing at the location I can't imagine a worse project. The desecration of an environmentally important eco system, the violation of the Seneca Nation's ancestral ground and the broader risks adherent in a project of this magnitude do not justify this proposed data center. We, those of us alive now, owe the next generations the protection of

the Great Lakes bio region. All New Yorkers will suffer from increased electricity rates and the resulting pollution. Please don’t destroy this site for the benefit of the corporations behind this. Please do the right thing . It will be your legacy, make it one to be proud of.

Thank you.

Sincerely,

Suzanne Tomkins Tomkins

Subject: AI data center comments

Hello,

I am writing in to oppose the implementation of the AI data center in our neighbor county. Despite what benefits you may believe will come from the addition of the data center, the results will be **overwhelmingly** negative for the whole community. The heavy environmental impacts will affect your neighbors' health, water supply, and electricity bills. This is all for the fad that is AI, that most people do not want in the first place, has not been shown to be profitable, does not have real use cases, and is only being kept alive by sheer willpower of the CEOs of the AI companies. Additionally, these data centers do not require many people to run, so it won't be bringing in many jobs after construction is complete.

Please do the right thing and decline this and future AI datacenters.

Thank you for taking the time to read,
Bret Cook

A 500 MW facility has no place in Upstate NY. This project will only siphoning funds from locals while also raising residential electric rates. A data center offers no benefits to the region and can only harm taxpayers.

Sincerely,

Andrew J Fitzgerald

Batavia NY 14020

Dear Genesee County Economic Development Center (GCEDC),

Please accept our submission of the Applied Economics Clinic "Comments Regarding STREAM's Proposed Data Center" report (attached) as a part of the public hearing record for the STREAM US Data Center proposal.

Partnership for the Public Good (PPG) is a community-based think tank that builds a more just, sustainable, and culturally vibrant Western New York through action-oriented research, policy development, and resident engagement. We have over 390 partner groups that determine our policy agenda through an annual, democratic process. Over the years, many of our policy priorities have focused on advancing responsible, impactful economic development.

We stand alongside our partners, such as the Clear Air Coalition and the Sierra Club Niagara Group, to **call on the GCEDC to deny the financial incentives requested by STREAM US Data Centers.**

As it stands, the STREAM development does not provide nearly enough community benefit to justify the major financial incentives that it is requesting from GCEDC. The attached report demonstrates that the project is highly unlikely to generate the number of jobs that STREAM claims it will. This means that GCEDC and—more importantly—Genesse County residents would be sacrificing $1.4 billion in taxes for jobs that will likely never materialize. Further, if we imagine that the STREAM data center would be similar to other data centers across the US, its massive drain on electricity would be expected to increase residents' electricity costs—a cost that residents should not have to bear, especially after sacrificing over a billion dollars in local taxes.

Beyond concerns about implausible job claims and increased electricity costs, there are several other costs that STREAM has failed to consider. We encourage you to read about the full breadth of concerns in the attached report. Western New York residents deserve economic development that *enhances* their region—not flashy projects that purport to provide much more than they realistically can, all at the expense of surrounding communities.

Sincerely,

Sarah Wooton

Comments Regarding STREAM's Proposed Data Center

Author: Bryndis Woods, PhD

Date: April 9, 2026

Executive Summary

In January 2026, STREAM U.S. Data Centers, LLC (STREAM) applied to the Genesee County Economic Development Center to construct a 2.2 million square-foot data center campus in the Town of Alabama, New York, located in Genesee County. On behalf of Tonawanda Seneca Nation and Sierra Club Niagara Group, these comments address STREAM's proposed data center, including its claimed costs and benefits for the local community.

Key findings include:

- The project would require 500 megawatts (MW) of electricity, approximately four times the total generation capacity currently operating in Genesee County (122 MW).
- STREAM does not provide any supporting materials for its cost-benefit analysis (CBA), which fails to meet standards expected in a public decision-making process and is insufficient to determine whether the proposed project would provide net benefits for the local community.
- STREAM's CBA results differ substantially from one CBA to the next: total costs increased from $472 million to $781 million to $1.4 billion, and total benefits vary from $1.2 billion to $2.6 billion.
- STREAM has failed to address potential costs associated with the project, including: effects on property values, effects on tourism and recreation, utility bill impacts, public health impacts, the cost of public infrastructure required for the project, or the local disturbances associated with project development such as placing cables and fiber optic lines.
- STREAM's job creation estimates exceed values found in publicly available data and information, average publicly available estimates indicate that the proposed project would create about 4,100 fewer direct temporary jobs than the Company claims, and 1,300 fewer indirect temporary jobs than the Company claims.
- STREAM has requested a local sales tax abatement and mortgage recording tax abatement, which—taken together—are worth 25 times more than the benefits provided by the proposed PILOT/Host payments.
- Valuing data centers is challenging and complex: if STREAM's proposed data center's assessed property value is incorrect, that would impact the ratio of the Company's PILOT/Host payments relative to their waived property taxes.
- STREAM's proposed data center is near the Tonawanda Seneca Nation's ancestral forest The Big Woods, Iroquois National Wildlife Refuge, the Tonawanda Wildlife Management Area, and the Oak Orchard Wildlife Management Area and may negatively impact local tourism and recreation, which are an integral part of the community and economy.

Introduction

The United States is the world's largest data center market and data centers are expected to continue to grow rapidly with impacts for communities all around the nation.[1] As data centers have grown, more communities are grappling with what it means to have a data center for a neighbor, and public opposition has grown. According to a research report from Data Center Watch—a firm tracking data center opposition—data center developments worth a combined $64 billion were either blocked or delayed between May 2024 and March 2025, due, at least in part, to local opposition efforts.[2] The report also found that opposition to data centers "cuts across political lines…and marks a rare area of bipartisan alignment in infrastructure politics."[3] According to The Brookings Institution's research summary of America's Rural Future virtual symposium, which "examined the local implications of AI and data center development for rural communities across the United States," rural community representatives emphasized the importance of "trusted information, transparency, fairness, clear guidelines, and governance capacity to ensure inclusive processes that advance community interests" including by establishing "clear, measurable local benefits."[4] Here, it is important to note that STREAM has not disclosed who the tenant of the data center campus will be, nor has it disclosed how various costs and benefits will be allocated between STREAM and the tenant, despite acknowledging that such allocations exist.[5]

Common concerns among local communities where data center developments are proposed include higher utility bills, water consumption, noise, and impacts on property values and green spaces.[6] The remainder of these comments address all those concerns, except higher utility bills for which detailed quantitative analysis is recommended. The timeline of the proposed data center development at issue in these comments did not permit assessment of the project's potential impact on utility rates and bills. However, it is important to note that in the three states with the highest concentration of data centers—Illinois, Virginia and Ohio—electric bills were 16, 13 and 12 percent higher in August 2025 (respectively) than a year prior, more than double the national average electric bill increase.[7] Across the country, electric bills have been increasing faster than inflation—the increases were more than double the rate of inflation in 2025—and data center developments are important to understanding why. Their high energy demand, the cost of new electric infrastructure they require, and ongoing electric maintenance costs are all costs

shared across all electric customers in the same utility service area.[8] According to a Bloomberg News analysis from 2025, areas near new data centers saw an increase in electricity costs of as much as 267 percent compared to 2020.[9]

On behalf of Tonawanda Seneca Nation and Sierra Club Niagara Group, these Applied Economics Clinic comments address STREAM's proposed data center, including its claimed costs and benefits for the local community. We determine that the materials the Company has provided are incomplete and insufficient to determine whether the proposed project would provide net benefits for the local community. Finally, we highlight three potential costs that are omitted from the Company's materials: lower-than-claimed local job creation, effects on property values, and effects on tourism and recreation. We would like to emphasize that these three costs are not comprehensive of all the costs from the proposed data center that ought to be considered. Additional potential costs include effects on utility bills (as discussed above) and effects on public health (due to the emissions from on-site diesel-fired backup generators).[10]

About STREAM's proposed data center

In January 2026, STREAM U.S. Data Centers, LLC (STREAM or The Company) applied to the Genesee County Economic Development Center (GCEDC)—a public agency that offers tax breaks and other economic incentives to attract private business—to construct a 2.2 million square-foot data center campus at the Western New York Science & Technology Advanced Manufacturing Park (STAMP) in the Town of Alabama, New York. STREAM's parent company is Apollo Global Management (Apollo), one of the world's largest private equity firms reporting assets worth about $450 billion in September 2025.[11] (Apollo is being sued by its shareholders in a proposed class action for "allegedly defrauding them for nearly five years about [Apollo's] business dealings with disgraced sex offender and financier Jeffrey Epstein").[12] The proposed

[10] Because data centers need to operate 24/7, 365 days a year, they need backup power during grid outages. To ensure this power is available when needed, data centers have backup diesel generators that are tested at least once a month. See: https://www.eesi.org/articles/view/communities-are-raising-noise-pollution-concernsabout-data-centers. Diesel generators produce local air pollution, including particulate matter and NOx [nitrogen oxides], "which impacts growing lungs of children, can add cases of asthma, and can exacerbate heart disease and other underlying diseases in the elderly." See: https://www.lincolninst.edu/publications/land-lines-magazine/articles/land-water-impacts-data-centers/.

data center campus includes three, two-story buildings on a 90-acre footprint. An additional 40 acres will be "utilized as temporary construction logistics areas in support of the project."[13] The project would require 500 megawatts (MW) of electricity, which is approximately four times the total generation capacity currently operating in Genesee County (122 MW).[14]

The Town of Alabama is in Genesee County, between Buffalo and Rochester, sits on approximately 28,500 acres, and has a population of approximately 1,800 with a median household income of $64,000. About 5,700 acres within the Town's borders is sovereign land of the Tonawanda Seneca Nation, and the proposed project site borders the Tonawanda Seneca Nation's ancestral forest, The Big Woods (see Figure 1).[15] Several wildlife preserves occupy much of the Town's land, including the Iroquois National Wildlife Refuge, the Tonawanda Wildlife Management Area, and the Oak Orchard Wildlife Management Area.[16]

STREAM's claimed costs and benefits

According to STREAM's most recent project application, the total cost of the project is estimated at $19.5 billion: an $8.3 billion increase from the previous version of the Company's application filed just one month prior,[17] and a $13.2 billion increase from the Company's original application filed in early 2025 (see Figure 2 below).[18] (Note: the Company's 2025 application was withdrawn after the Tonawanda Seneca Nation and Sierra Club filed a lawsuit with the New York State Supreme Court that alleged that GCEDC violated state law by failing to conduct a full environmental review.[19]) The Company's estimated total costs include: 1) construction costs; 2) costs to purchase the land; 3) building costs including engineering costs, architect costs, and blueprint fees; and 4) other equipment costs, including computers, furniture, etc.[20]

Figure 2. STREAM data center estimated total cost (billions $)

[20] Genesee County Economic Development Center. February 27, 2026. *Application for Financial Assistance.*

As part of its application, STREAM contracted with a third-party (MRB Group) to conduct a series of cost-benefit analyses (CBA) of the proposed project, comparing the project's expected costs with its expected benefits.[21] The costs reflected in the Company's CBA are tax exemptions (see Table 2 below). The Company's March 2026 CBA report notes that STREAM "will be submitting a separate economic impact study based on industry experience," but no such study has been made available on GCEDC's project website yet.[22]

Three CBAs have been submitted by the Company: the first in February 2025, the second in January 2026, and the third in March 2026. All three CBAs claim that STREAM's benefits will outweigh the limited costs included in the studies:

- The February 2025 CBA concluded that local benefits would outweigh costs 5-to-1,
- The January 2026 CBA concluded that local benefits would outweigh costs 7-to-1, and
- The March 2026 CBA concluded that local benefits would outweigh costs 3-to-1.

The most recent (March 2026) CBA maintains that benefits stem from: 1) new wages from job creation; 2) new revenues to municipalities and schools from Payment in Lieu of Tax (PILOT)[23]/Host payments; 3) new sales tax revenue from the project's electrical usage; 4) new revenues to the Town of Alabama Fire District due to annual fire district fees; 5) Company investments in electrical infrastructure needed to support the project; and 6) project fees being reinvested by GCEDC to support projects that benefit Genesee County.[24] Only some of these benefits are monetized in the BCA analyses performed by the Company (see Table 1). It is important to note that the Company maintains that investments in electrical infrastructure needed to support the project is a benefit for the local community, but the primary beneficiary of additional electrical infrastructure required for the project is STREAM itself, not the local community that hosts said infrastructure.

All three studies fail to include key potential costs to the local community, such as higher utility bills, impacts of increased water consumption, noise pollution, impacts on property values, effects on green spaces, the cost of public infrastructure required for the project, or the local disturbances associated with project development such as placing cables and fiber optic lines.

STREAM's CBA results differ substantially from one CBA to the next: total costs increased from $472 million to $781 million to $1.4 billion. Total benefits also varied considerably: from $1.2 billion to $2.6 billion to $2.2 billion (see Table 2). Even though total estimated benefits fell between the January 2026 CBA and the March 2026 CBA, two benefit categories increased substantially: sales tax revenue, which increased by $190 million, and other municipal revenue, which increased by $259 million.

Table 1. Benefits included in the Company's BCA analyses

Company's Claimed Benefits	February 2025 BCA	January 2026 BCA	March 2026 BCA
1) New wages from job creation	Yes	Yes	Yes
2) New revenues to municipalities and schools from Payment in Lieu of Tax (PILOT) /Host payments	No	Yes	Yes
3) New sales tax revenue from the project's electrical usage	Yes	Yes	Yes
4) New revenues to the Town of Alabama Fire District due to annual fire district fees	No	No	Yes
5) Company investments in electrical infrastructure needed to support the project	No	No	No
6) Project fees being reinvested by GCEDC to support projects that benefit Genesee County	No	No	No

Data sources: 1) STREAM Cost Benefit Calculator, February 2025; 2) STREAM Cost Benefit Calculator, February 2026; 3) STREAM Cost Benefit Calculator, March 2026.

Table 2. Comparison of Company's CBA analyses (millions $)

		February 2025 BCA	January 2026 BCA	March 2026 BCA	Jan 2026 to Mar 2026 Comparison
Costs	Property Tax Exemption	$0	-$20	-$58	-$39
	Sales Tax Exemption	$463	$769	$1,432	$662
	Mortgage Recording Tax Exemption	$9	$31	$31	$0
	TOTAL	**$472**	**$781**	**$1,405**	**$624**
Benefits	Payroll	$874	$1,979	$1,139	-$840
	Property Tax Revenue	$103	$207	$206	-$1
	Sales Tax Revenue	$12	$28	$218	$190
	Income Tax Revenue	$134	$89	$51	-$38
	Other Municipal Revenue	$82	$345	$604	$259
	TOTAL	**$1,205**	**$2,647**	**$2,217**	**-$430**

Data sources: 1) STREAM Cost Benefit Calculator, February 2025; 2) STREAM Cost Benefit Calculator, February 2026; 3) STREAM Cost Benefit Calculator, March 2026.

One of the primary benefits of the project touted by the Company (and represented in publicly available information regarding the costs and benefits of data centers[25]) are STREAM's PILOT/Host payments to Genesee County, the Town of Alabama and the Oakfield-Alabama School District. STREAM notes that it has "agreed to pay $7 million in base annual PILOT/Host payments," which will total "more than $283.9 million in new revenue over 30 years"—$84.8 million more than what their waived property taxes would have

[25] See, for example: 1) S&P Global. Available at: March 24, 2026. "Everywhere, All At Once: How The Growth Of Data Centers Could Carry Risks For U.S. Local Governments." Available at: https://www.spglobal.com/ratings/en/regulatory/article/everywhere-all-at-once-how-the-growth-of-data-centers-could-carry-risks-for-us-local-governments-s101673051; 2) Gorey, J. October 17, 2025. "Data Drain: The Land and Water Impacts of the AI Boom." Lincoln Institute of Land Policy.

been over the same period (or $58.3 million on a discounted basis).[26] This benefit is actually included as a negative cost line item in the Company's BCA (see the "property tax exemption" line in Table 2).

However, the Company has also requested a local sales tax abatement of 4 percent, which amounts to a $1.4 billion cost in the Company's most recent CBA ($662 million more than the same cost line item in the Company's January 2026 CBA). STREAM has also requested a 0.5 percent abatement of the mortgage recording tax, which amounts to a $31 million cost in both 2026 versions of the CBA.[27] Taken together, these two costs are **25 times greater** than the benefits provided by the PILOT/Host payments.

STREAM's CBAs are insufficient to determine the true costs and benefits of the proposed project

The CBA results provided by STREAM are incomplete and insufficient to determine whether the proposed project would provide net benefits for the local community for multiple reasons. Key concerns with STREAM's CBA analyses include:

- **Lack of supporting materials:** The Company does not provide supporting materials to demonstrate the costs or benefits of the project. For example, STREAM fails to provide materials that support the Company's assertion that the project will create 6,000 temporary construction jobs over five years. This failure to provide support materials does not meet the standards expected in a public decision-making process.
- **Significant changes in cost and benefit line items without explanation:** The Company's CBA analysis and results changed significantly between each version of the CBA, but the Company has not provided any explanation regarding the reasons for those changes. For example, the Company fails to explain why the March 2026 CBA included a new benefit line item—"ongoing sales tax revenue on electricity," a benefit valued at $201.6 million—that was not included in the January 2026 CBA.
- **Inflated job benefits:** The Company's job creation estimates exceed values found in publicly available data and information. The Company anticipates that the project will create 7,766 direct and indirect temporary jobs and 223 direct and indirect permanent jobs, and makes payroll benefit estimates on that basis. However, the U.S. Chamber of Commerce Technology Engagement Center has found that a "typical large data center" creates many fewer jobs: approximately 1,700 direct and indirect temporary jobs and 157 direct and indirect ongoing jobs.[28] Similarly, The Brookings Institution determined that "even in large-scale centers, construction jobs often total around 1,500 skilled trade workers and 100 operational jobs."[29]

[26] Stream US Data Centers Project - Cost Benefit Calculator. March 2026.
[27] Stream US Data Centers Project - Cost Benefit Calculator. March 2026.
[28] U.S. Chamber of Commerce Technology Engagement Center. 2017. *Data Centers – Jobs and Opportunities in Communities Nationwide.* Available at: https://www.uschamber.com/assets/documents/ctec_datacenterrpt_lowres.pdf. Page 11.
[29] Lee, N. T., West, D. M. November 5, 2025. "The future of data centers." Brookings.

- **Missing costs:** All three of the Company's CBA analyses fail to include any costs beyond sales and mortgage tax exemptions (property tax exemptions are listed as a cost line item, but are negative, meaning they reflect the projected benefit of PILOT/Host payments as described above). The Company has failed to identify or assess various potential costs associated with the project, including: effects on property values, effects on tourism and recreation, costs associated with air pollution from the proposed facility's backup diesel generators, utility bill impacts, public health impacts, the cost of public infrastructure required for the project, or the local disturbances associated with project development such as placing cables and fiber optic lines.

STREAM's provision of comprehensive information regarding the anticipated costs and benefits of the proposed project to ensure that local communities—including Town of Alabama residents and the Tonawanda Seneca Nation—is essential to good public decision making and to making sure impacted communities have an accurate understanding of the costs and other risks to which they are exposed. The remainder of these written comments describe potential costs of the proposed project that the Company has omitted in its CBA analyses or its various application materials to date.

Costs omitted (and benefits inflated) in STREAM's CBA

All three of STREAM's CBA studies failed to include key project costs, such as capital costs like construction costs or equipment costs, as well as other potential costs of the project, such as higher utility bills, impacts of increased water consumption, costs associated with air pollution from the proposed facility's backup diesel generators, noise pollution, impacts on property values, or effects on green spaces, tourism, and/or recreation. Given the limited timeline in which to produce these comments ahead of key decision-making regarding the proposed project, these comments address two potential costs that the Company failed to consider—effects on property values and effects on tourism and recreation—and provide a revised estimate of the Company's claimed job creation benefit.

Effects on local employment

STREAM's job creation estimates exceed values found in publicly available data and information. The Brookings Institute has found that the "employment benefits of data centers are variable and often overstated," and highlights the need—particularly in rural communities—to focus on job quality, duration, and how to make new positions attainable for residents.[30] There is broad consensus that the primary local benefit of data centers is tax revenue and PILOT payments because data centers do not create many permanent jobs and the temporary jobs created during their construction phase are of limited benefit to local communities.[31]

AEC reviewed publicly available literature regarding data center job creation estimates, which is summarized in Table 3 below. STREAM estimates that the proposed project will create 12 direct,

[30] Pipa, A. F., Aley, A. March 2, 2026. "The local implications of data centers for rural communities in the US."
[31] Gorey, J. October 17, 2025. "Data Drain: The Land and Water Impacts of the AI Boom." Lincoln Institute of Land Policy.

temporary jobs per megawatt (MW) and 3.5 indirect, temporary jobs per MW—estimates that are much higher than other publicly available values from the literature. In recent studies of data center job creation, direct, temporary job creation estimates range from 0.7 to 6.4 jobs per MW and indirect, temporary job creation ranges from 0.4 to 1.6 jobs per MW.

Table 3. Data center job creation estimates (jobs per MW)

Available at: https://www.rowanfrederick.com/faqs.

If STREAM's temporary job creation estimates are corrected to reflect average publicly available estimates, the proposed project would create 1,898 direct temporary jobs (about 4,100 fewer than the Company claims) and 452 indirect temporary jobs (about 1,300 fewer than the Company claims). STREAM also estimates that the proposed project will create 0.3 direct, ongoing jobs per MW and 0.1 indirect, ongoing jobs per MW: These estimates are more in line with other publicly available estimates from the literature. It is important to note that permanent jobs are usually of greater benefit for local populations than temporary jobs, though STREAM has not provided any information about ensuring that job creation benefits local populations specifically.

According to the Company's most recent BCA analysis, STREAM will receive $1.4 billion in tax exemptions from GCEDC. If the Company's ongoing job creation estimates are correct, STREAM would be given an astounding $8.3 million in tax breaks per direct, ongoing job created. Across all of the publicly available data and information reviewed, experts broadly agree that data centers do not require many employees once they are built, with The Brookings Institution noting that is because they "largely consist of file servers and networking equipment," which means that "other community benefits may be more salient for

regions expanding their data center footprint."[32]

Effects on property values

Based on a review of publicly available information, the effect of data centers on property values does not appear to be uniformly negative or positive—the answer to "how will a new data center impact the property values of the residents who live near it?" is, ultimately, "it depends." In high-growth real estate markets, home prices have continued to rise despite new data centers coming online nearby.[33] However, potential buyers consider home prices along with other factors, such as utility costs, light pollution, and ambient noise, when deciding whether a community is attractive.[34] In addition, rising property values can price out first-time home buyers and can be negative for longtime and/or lower-income homeowners due to rising property taxes.[35] Ultimately, the proximity of a data center to one's home—and the buffers that exist between it and the community, such as noise mitigation and landscaping—is the most important variable in terms of its effect on property value and attracting potential buyers.[36]

In addition, evidence suggests that the methods used to assess the property value of data centers themselves are inconsistent across jurisdictions, and that assessors often lack the specialized expertise in data center valuation needed to assess their fair market value effectively. For example, the value of data centers is derived from more than the land they sit on—data centers require extensive electric and cooling infrastructure to operate as well as extensive and valuable technological equipment. However, the speed at which technology becomes obsolete calls for rapid depreciation of specialized technological equipment, which should be considered separately from the value of real estate.[37] While technological equipment can be removed and, therefore, considered separately from the value of the real estate, some of the infrastructure needed to operate a data center is integrated into the building in such a way that removing it is cost-prohibitive or impossible.[38] These complexities pose valuation challenges that require a more nuanced, specialized valuation approach. It is important to note that—if STREAM's proposed data center's assessed property value is incorrect—that would impact the ratio of the Company's PILOT/Host payments

relative to their waived property taxes.

Effects on tourism and recreation

In Genesee County, tourism and recreation are an integral part of the community and economy: STREAM's proposed data center borders the Tonawanda Seneca Nation's ancestral forest, The Big Woods, and is in close proximity to various wildlife preserves, including the Iroquois National Wildlife Refuge, the Tonawanda Wildlife Management Area, and the Oak Orchard Wildlife Management Area.[39] Empire State Development of New York State's *2024 Tourism Economics Report* found that, in Genesee County, visitors spent $144.5 million in 2024, generating about $331.1 million in direct personal income for county residents, creating about 11,000 direct jobs and about 5,000 indirect jobs, and generating $8.8 million in local tax revenue—equal to $665 in tax savings per household.[40] It is crucially important to understand that STREAM's proposed data center may negatively impact local tourism and recreation—for example, the project could diminish local water bodies like the Oak Orchard Creek or Tonawanda Creek, and create noise and/or light pollution that permeates into local wildlife preserves. As with so many other communities where proposed data centers are to be located, Tonawanda Seneca Nation fear STREAM's proposed data center "could harm the old-growth forest they rely on for medicinal plants and hunting, primarily due to 24/7 lights and noise emitting from the facility."[41] In July 2025, the County of Orleans Department of Tourism (Orleans County is located directly north of Genesee County) prepared a statement at a community meeting regarding the proposed data center that detailed their concerns regarding the impact of the proposed data center on the Oak Orchard River and the impacts that would create for Lake Ontario and associated tributary waters, noting that "the good health and non-impacted water of the Oak Orchard River is vitally important to the fishery and boating interests which support the tourism economy for Orleans County."[42]

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Brittany Reisse

Subject: No Data Centers in WNY!

I am appalled that a data center is being considered near an Iroquois wildlife refuge. Native Americans have been treated abhorrently since Europeans arrived. It is unconscionable to even consider putting a data center near a Native American reservation.

Not to mention the environmental impact it will have on local and migrating wildlife. The noise, light and environmental pollution has no place anywhere near a wildlife sanctuary or reservation.

Furthermore, it will raise energy costs for the entire region with no benefit to the residents of the region. It will not be a large employer or be invested in the betterment of WNY. Things are already outrageously expensive, using government funding on top of increasing a necessary expense is not in the best interest of the people who the government is supposed to be representing.

Do better by the people of this region and especially the Iroquois and wildlife. No data centers in WNY!

A very concerned WNY citizen,

Anne Beckert

I have spent 50+ years birding, hiking and enjoying the nearby swamps and the rich wildlife there. To ruin that for a boondoggle that costs 19 billion dollars for 125 permanent jobs is ridiculous, particularly when it will ruin the environment around -- creating the opposite of a "benefit to the community. DO NOT BUILD THIS HERE!!!!

Sincerely,

Susan A. Tannehill

Subject: No on the data center

Hello, I'm Robert Thuerck and I've grown up in Pembroke, lived in Alabama less than a mile from the proposed data center site, and now live in Alden about 15 minutes away. The Iroquois National Wildlife Refuge has been one of the most precious and largest natural sanctuaries of Western New York, being even more critical in that it is a marshland which is home a great diversity of species than places without marshland. On top of that this data center will be directly adjacent to the Tonawanda Seneca Nation, our friends, neighbors, and historically mistreated original Americans. The Data Center proposed directly on the edge of both of these historically and ecologically critical landscapes is shameful, short-sighted, and detrimental to our community. It reminds me of the "Buffalo Billion" which the lion's share went to the Tesla factory in Buffalo and never delivered on any of the promises because it was part of multiple corrupt dealings and now the CEO of Tesla actively works to undermine our elections. The noise of the data center will disturb the wildlife as well as the pollution during both construction and use. If you don't believe me take a look at the aluminum runoff that would enter the wildlife preserve from construction as well as the likelihood of losing marshland from blasting or water use just like it did in Wisconsin.

https://www.wkow.com/news/creek-concerns-near-meta-data-center-site-in-beaver-dam/article_61f4985b-afb7-4b58-a08e-2cf008f41aad.html

Can we finally stop these multi-billion dollar corrupt dealings that destroy our natural landscape that only benefit established Democratic and Republican leadership while the quality of life for all species and residents continues to decline? Thank you.

Subject: Public Comment GCEDC Data Center Project

Hi,

I am a concerned citizen living in Genesee County and I want to express my concern and disapproval regarding the planned data center in Alabama. I am concerned about how it would affect the power grid for surrounding communities, as well as how the water supply would be impacted. I am also concerned about noise pollution and other impacts to local residents and communities, especially the Seneca people. The construction of this center will undoubtedly affect my and others' willingness to stay in the area.

Thank you

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

NO AI DATA CENTERS

Sincerely,

Chris Toia

Subject: Data center project

Dear GCEDC Members,

Please act on behalf of the taxpayers and residents of Genesee County, who have made it abundantly clear that we DO NOT want a massive STAMP data center complex built in our county, particularly at such an environmentally sensitive location. The noise, the damage to our rural, peaceful lifestyle, the over consumption of our water and electricity, and the harm done to nature are but a few of the reasons we oppose it. The environmental impact is far from "minimal".

The proposed incentives are a slap in the face to the hardworking citizens of this region. A promise of 125 supposed "permanent" jobs is laughable.

There is a clear conflict of interest in the fact that you would generate 146 million dollars in fees from this deal.

Please find the integrity to stop this proposed project.

Sincerely,

David and Janice Laben

Subject: Strong Support for Data Center Development in Western New York

I am writing as a resident of Buffalo to express my strong support for advancing data center infrastructure in Erie County and the broader Western New York region.

Buffalo is a vibrant, growing city with significant potential in technology, gaming, remote work, and international connectivity—especially given our proximity to Canada. However, many residents experience frustratingly high latency, unstable connections, and inconsistent performance when engaging in real-time online activities such as gaming, video conferencing, cloud services, and streaming. These issues are unacceptable for a major metropolitan area like ours. Reliable, low-latency internet is essential infrastructure in the modern economy, and strategic data center investments can help strengthen local networks, improve peering, attract tech jobs, and reduce our reliance on distant servers.

Western New York already benefits from abundant, relatively clean hydroelectric power from Niagara Falls, making our region well-suited for energy-intensive facilities when developed responsibly. A well-planned data center project could bring construction and permanent jobs, increased tax revenue for schools and local services, and enhanced digital infrastructure that benefits both sides of the border. Canadians in nearby communities often rely on cross-border connectivity with Buffalo, and better regional infrastructure would support stronger economic ties and more stable service for everyone.

I urge you to support thoughtful, community-benefiting data center development that includes strong environmental safeguards, fair energy planning, and transparency with residents. We should seize this opportunity to position Western New York as a leader in next-generation infrastructure rather than falling further behind.

Thank you for your time and consideration. I would welcome any opportunity to discuss this further.

Sincerely,
Vincent Cipolla

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: Data Center

Alabama, NY does not need a massive data center. The costs od higher electric bills, environmental damage, and noise pollution are not worth the supposed "benefit" of 100 or so jobs. Building this complex nearby a wildlife refuge makes no sense when there are plenty of other locations.

Subject: No STAMP Data Center

To whom it may concern,

I am sending this comment to express my concerns about the data center, as a resident of WNY. We have seen the detrimental effects of data centers across the nation, ranging from noise pollution, air pollution, water usage, and land displacement. These data centers will do nothing except drain resources from people and communities across WNY, including the Tonawanda Seneca Nation, who have similarly expressed concerns about their ability to preserve and care for the land. No amount of economic profit is worth compromising the livelihood of the residents who actually live and work in WNY, especially when hardly any of us directly benefit from this. It has been abundantly clear that over the past few weeks and months, the pattern of privileging corporations and shareholders over working people and employees is far from sustainable. It is for the community to decide, not corporations, what we want to see in terms of development and projects. Anything less than that is a blatant show of disrespect to the WNY community and our collective organizing and concerns.

Best,
Kit Lam

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

We must protect not only the wildlife but the residents that live in this area. We only have one planet. This will be detrimental to the environment.

Sincerely,

Caitlin Goodrich

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
LiUNA Supporter

Subject: Comments on the Stream Data Center proposal in Genesee County

Hello!

I am writing to you today regarding the Stream Data Center proposal for the Town of Alabama, Genesee County, New York.

This proposal represents the building of a data center that will be one of the largest developments of its kind in the United States. Many concerns for this project have been cited by locals, including environmental and cultural concerns, especially from the Tonawanda Seneca Nation.

One of the things that sets the rest of New York State apart from New York City is the beautiful and peaceful land that makes up the vast majority of the area of the state. Leaving any city in New York, whether it be New York City, Buffalo, Syracuse, or Albany, will put you square into woodlands, wetlands, or farming communities. These are all necessary for sustaining life, from the smallest creatures to humans ourselves. The Stream Data Center will threaten local wetlands in Genesee County with noise, light, and water pollution. The proposed location for this data center is near the Iroquois National Wildlife Refuge and Oak Orchard, which are both critical habitats for birds along a global bird flyaway--a bird superhighway that is used by millions of birds for seasonal migration. Many species of birds also use stars to navigate during the night, and they are easily confused by industrial glow. In an area so close to a wildlife refuge, these impacts should not be ignored. If the data center plans to use local water for cooling, this can raise the temperature of runoff, thus endangering local fish, reptile, and amphibian populations.

Data centers are also notoriously loud due to large cooling fans. While it is difficult to study the noise levels of these data centers, people in communities where other data centers have been built have reported headaches, vertigo, nausea, sleep disturbances, ear pain, and hypertension, as well as developing tinnitus (ringing in the ears) due to the noise level of data centers near them. When complaints about the noise levels went unheard by local authorities and government, these people left their homes. In a state that continues to lose more residents than it gains year over year, building a data center in a normally peaceful community does not seem to be a way to retain or entice new people to move to the area.

The land where the Stream Data Center is proposed to be built is also near the Tonawanda Seneca Reservation, and is on land that Indigenous Americans previously inhabited. The Haudenosaunee Confederacy--of which the Seneca Nation is a part--has a core value called the Seventh Generation Principle. In short, the decisions we make today should be made in such a way that our descendants seven generations from now will see the benefits. We have a responsibility, not just to the people we share the land with today, but to the people who will inherit this land from us generations from now. What benefit is there to this proposed data center that we can justify against the destruction of woodlands, wetlands, farming communities, and the lives of animals and people alike? How will our

descendants look back upon us for leaving a world in which we prioritized economics over the preservation of our environment?

I urge you to please take these comments into consideration, and truly listen to the local people who are sharing their concerns about this proposal. This is a beautiful state, filled with natural wonders, that many people seem to forget in lieu of the amenities and ease of city life.

Sincerely,
Kiara Leatherbarrow

Subject: No data centers!

I am strongly opposed to any new data centers in our area. The negative environmental and economic impacts are too high to waste taxpayers money on this.
I dont want my taxes to go to a project that will increase my utility bill, waste huge amounts of water, reduce propery values and create far fewer jobs than they claim.

Thank you for your time.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

While it is not surprising how advice and warnings of Indigenous people and allies have not been heeded in the planning and siting of this proposed mega-industrial development, consequences of going forward will be devastating well beyond the Tonawanda Seneca lands and waters. The whole bioregion will be at extreme risk. Wetlands are fragile ecosystems that provide invaluable services and habitat. Even if these

arguments do not sway decision makers, the economic costs are too high in the long run, regarding health and well being of residents, human and non-human.

Sincerely,

Holly Denning

Subject: In opposition to the data center plan

Hello,

Please do not sell out our environment and the future of our children for a data center that will pollute our water, air, and the wildlife reserves. This is beyond politics, this is about sustainability and conservation of the environment. We do not want to end up like California and other dry, Western states where our water and resources are sold off to private business at the expense of the people who live there (and pay taxes!).

If tourism is still a goal of this state and its counties, I implore you to think about how a data center like this will negatively impact those desires and potential revenues. As others have suggested, build on the brownfields.

Sincerely,
A concerned citizen who loves Western NY

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

I have worked in tech for nearly two decades, and I can tell you from personal experience that these data centers are detrimental to the people and land around it, near and far. Furthermore, why should another mega corporation not pay taxes and squander our resources in such a unique and important freshwater ecosystem? Millions of gallons of water not just once, but regularly. Constantly. Your actions on this today will cost us for generations to come.

Sincerely,

Amanda scigaj

Subject: Comment About the Stream Project

I oppose the STREAM project for a number of reason. First, such a large project has no business being so close to the Iroquois Wildlife Refuge and the sovereign land of the Tonawanda Senecas.

As a resident of North Tonawanda, we have been negatively affected by the data mining center that was pushed through by former city representatives. We now have to live with the repercussions of a project that was pushed through despite serving the best interests of the citizens in that community.

These data mining centers do not produce any benefits to the communities they are located in on top of the negative environmental impacts. I assure you that if this project was in your backyard and if you had to live with it, that you would oppose it. Do the right thing, do not allow this to move forward.

Subject: Alabama NY Data center

To all:

WNY resident since 1982. WNY is lovely, full of water, and nature. We have had enough development. This is downright disgusting to put this anywhere near Iroquois national park. The water bodies there are abundant. Your data center WILL ruin it. I find it a disgrace that anyone is even considering this. Keep data centers out of NY, away from nature and away from us. I hope someone burns it down if its built.

Subject: Against the data center

I am against construction of the data center. There are too many unanswered questions regarding impact on the wildlife and land, noise issues, and the significant power usage.

The proposed safety net of eliminating tax benefits for stream if the job creation numbers do not meet the promised metrics is not sufficient. Either the data center continues forward and the local community continues to suffer, or the data center is abandoned and the cost of infrastructure will be absorbed by local residents.

Additionally, no construction project should go forward without significant consultation and cooperation with local indigenous communities.

The long term damage of these data centers is not yet understood and WNY should not be a early adopter of such a potentially dangerous and likely short term technology.

Sustainable Finger Lakes is one of many citizen-based organizations in upstate NY that is firmly opposed to data center development in any of our communities. These cause localized harms from noise impacts on human health and wildlife to threats to water supplies. But everyone across upstate NY is impacted by the even further utility bill hikes caused by sudden massive market demand for electricity that our regional power grid can not easily nor cheaply provide.

The supply side of everyone's electric bill will go up considerably, compounded by Trump's war in Iran and the impact on global natural gas prices and our gas peaker plants. It is criminal to invite further impacts on the voters and taxpayers of this state by spending our tax dollars on data centers that provide almost no permanent jobs while generating ongoing harms to the voters of this state.

Governor Hochul needs to understand that we will not vote for her, and campaign donations from the AI sector won't win her election bid.

Sincerely,

Gay Nicholson

Subject: Strongly oppose construction of data center

Hello, I am a concerned citizen of the area and I would like to strongly oppose the construction of the Stream Data Center. These centers have done nothing but negatively impact the lives, environment, and economy of the areas they've been built in and nobody wants them here but billionaires looking to keep lining their pockets. It will create almost no jobs and do nothing but waste potable water, energy, and space while skyrocketing the environmental toll we're already dearly paying. Please do not allow this bastion of fascism to be built on our homes.

Subject: Proposed data center in Alabama

Good afternoon,

As someone who grew up in Albion, trips to the Tonawanda reservation and surrounding areas were frequent for me and my friends. I never truly appreciated the area (silly teenager stuff) until I attended Genesee Community College, and then even more later when one of my biology professors at University at Buffalo had us do a class project at Swallow Hollow.

Swallow Hollow became one of my favorite places to go. I've walked the trail numerous times, laughed there, cried there, sat contemplating important life decisions there while taking in the beautiful sights and sounds of nature. The wildlife and pristine beauty in the Genesee county area is without a doubt half of the reason anyone visits or lives in that general area, along with Main Street pizza in Batavia (yum!).

Please do not put money before the natural, irreplaceable beauty of Genesee county. Do not put money before the Native Americans whose home is there, the wonderful people who live there, my family whose home is so close to there. It will disturb the picturesque, perfect balance of people and nature that exists there, and for what? To bring in a data center that destroys the local environment and creates minimal jobs, few of which will actually go to locals, I'm sure. I understand that area needs more jobs, but maybe try to attract businesses that actually benefit the people who live here without harming the environment. Data centers benefit no one and AI is a overhyped bubble that's bound to burst.

Even though I no longer live in the area, I still visit, and my fiancée and I have tossed around the idea of moving back to the area to start a farm based business there. If you put in a data center, that will never happen, and I'm not alone in this feeling - is it really worth decimating the local property values? How will that help the community?

This data center will ultimately hurt the entire area so much more than it will ever help, and you're giving them tax breaks, for what? To entice them to destroy our precious wildlife refuge? Data centers bring NOTHING to the table except environmental destruction. Do better for the people. No data centers in New York!!

Thank you for your time in reading this email, and despite my seething disdain towards the proposal, I hope that you have a good day,

Chantelle J Alello

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Marianne Scutt

Subject: Don't Build The Data Center

To whom it may concern,

I'm writing to express my extreme aversion to the proposed building of the data center in WNY. I was born and raised in Buffalo, went to college in Fredonia, and worked at Chautauqua Institution. I have traveled all throughout the region and many parts of the greater state, thoroughly enjoying its many scenic towns and beautiful natural lands. I can say wholeheartedly that I love Western New York, that I'm proud to live here, and that I deeply care about its future.

That said, I believe the construction of a data center here would be a massive mistake. As a creator, specifically a writer and filmmaker, I have many negative opinions about AI. However, I'll set those aside to focus primarily on the impact of the proposed building itself. There have been countless studies and articles written about the tremendous environmental impact data centers have on their surrounding regions. The inordinate amount of power and water that is required to run these centers is absurd. We must protect our Great Lakes and our beautiful forests, for our generation and the next. The sheer cost, financially, environmentally, and honestly, ethically, is not worth it in any circumstance.

I truly hope you reconsider this plan, and listen to the great outcry so many of us WNYers have raised against the data center. If I had to describe this proposal in one word, it would be ***inhumane.***

Thank you for listening to my thoughts, and I hope you make the right decision.

Sincerely,
Jackson DiCarlo

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

These data centers will deplete the energy and water resources needed by the actual tax paying citizens of New York. They are a blight on the landscape, increase air and noise pollution and are 100% contrary to the climate goals adopted by New York. Citizens across the country are uniting against these terrible projects and New York should lead the way!

Julia Calnek

The GCEDC has been given a gift.

Rarely are people so united and so active in expressing what they want for the future of their community. But Genesee County residents and their neighbors have been explicit: they do not want a data center.

Rarely is the writing on the wall so clear, so very legible, but anyone paying attention can see the wave of board members and council members across the country who cater to data centers and are then voted out or recalled in a landslide.

Rarely are the numbers so obvious, but the Good Jobs First analysis of the deal is undeniable: a measly 125 jobs that cost $11 million each in lost tax revenue.

The GCEDC has been gifted every opportunity, every reason, every excuse to say "no" to the STREAM data center. They have all the plausible deniability in the unlikely event there are complaints down the road. Their jobs have been made easy.

Sincerely,

Carly Vair

Subject: Data Center in Alabama, NY

To the Planning Committee and Project Stakeholders,

I am writing to you today not just as a resident, but as a witness to the irreplaceable vitality of the Iroquois National Wildlife Refuge. While I understand the drive for technological expansion, placing a massive industrial data center directly adjacent to one of our region's most significant ecological gems is a step toward a silent spring we cannot afford.

The Refuge is a critical theater for North American bird migrations and a delicate nursery for local amphibians. A facility of this magnitude brings with it more than just a physical footprint; it introduces light pollution that disorients migratory birds and a constant acoustic hum that can disrupt the breeding signals of the very wildlife that defines this landscape. Furthermore, the immense water requirements and heat discharge typical of such centers pose a direct threat to the thermal and chemical balance of our local wetlands.

Progress should not necessitate the industrialization of our last remaining quiet places. We look to you to seek alternative locations that do not border a National Wildlife Refuge—places where your infrastructure can thrive without muffling the chorus of the wild.
I urge you to protect the integrity of the Iroquois wetlands and reconsider this site. Some things, once disrupted, cannot be rebooted.

Sincerely,

Bethel Ademowore

Subject: NO DATA CENTERS

To whom it may concern,

I am writing to express written disapproval for the proposed data center in Genesee County, NY. First, I am against AI in all rights and believe it leading to the collapse of society as we know it. I do not want any public funds to be delegated to the development of data centers. Second, It is proven that data centers disrupt the ecological systems around which they are built. There is a nearby National Wildlife refuge and this data center will inherently destroy it and the thriving wildlife that lives there. Third and most important: This land is not up for the taking to the highest bidder!! This is Iroquois Nation land and demands to be returned to them. The reasons against this data center keep stacking up and anybody who has an moral guiding can see that. We must not allow corporations to take these lands to exploit them for a profit.

With the utmost disgust that I'm even having to speak out against you,

Hannah

From: Romy Stoffel <romstoff@gmail.com>
Sent: Thursday, April 16, 2026 1:30 PM
To: streampublichearing@gcedc.com
Subject: Genesee County Data Center

Good afternoon,

I am writing to let you know of my opposition to the construction of a data center in Alabama, NY. There is a plethora of data showing that the harm that data centers bring to communities far outweight any estimated good. Here in Western New York, utility bills are already skyrocketing thanks to widespread use of LLMs, and the people are being pushed further into financial insecurity and poverty because of it.

Additionally, our proximity to the Great Lakes and the Finger Lakes provides us with some of the cleanest freshwater in the United States. These are natural treasures to be protected and preserved, and we are unwilling to sacrifice the health of our waterways for corporate profits.

The environmental impact is not limited to water pollution. The Iroquois National Wildlife Refuge is a crucial resource for the preservation of native species who will also be negatively affected by the construction and operation of a data center.

Finally, Alabama is home to the Seneca people, whose sovereignty over their own land and autonomy should be respected.

Thank you for your attention to this matter,
Romy Stoffel

Subject: Formal Opposition to STREAM U.S. Data Centers Project at STAMP — Environmental, Sovereign, and Community Concerns

To the Board of Directors of the Genesee County Economic Development Center,

My name is Hanna Skubis, and I am a current resident of Buffalo, New York. I write to formally and firmly **oppose** the approval of STREAM U.S. Data Centers' proposed 2.2 million-square-foot data center campus at the Western New York Science, Technology and Advanced Manufacturing Park (STAMP) in Alabama, NY.

I want to be transparent about who I am: I work with artificial intelligence every day. I use AI tools professionally, work in a field that depends on them, and help build with them. I understand better than most what fuels these facilities, and I am telling you clearly that this project, in this location, is wrong. The fact that I rely on AI makes my opposition more meaningful, not less. I know what data centers cost, not just financially, but environmentally and socially. **This would cost our community far too much with little to no gain.**

TREATY-PROTECTED SOVEREIGN TERRITORY IS AT STAKE

The Tonawanda Seneca Nation's Reservation Territory directly borders the STAMP site. The Nation has consistently and clearly opposed this project since its inception. Their Chief, Kenith Dale Jonathan, has stated on record that the Territory and its natural resources are all that the Nation's citizens have, and that if the Territory is damaged, there is no place to go. **Is it not time we stop hurting those who were stewards of this land long before we were here?**

The Big Woods adjacent to the project site is not simply green space. It is a living, irreplaceable resource used by Nation members for hunting, gathering medicinal plants, and sustaining cultural practices passed down across generations. Resident Barbara Jonathan is fighting to preserve it for a 6-year-old cousin who will still be living there in 20 years. **This is an irreversible, multi-generational impact, and the GCEDC does not have the right to make it.** This is especially true given that the Nation made its opposition unmistakably clear and was never adequately consulted.

THE ENVIRONMENTAL REVIEW PROCESS HAS BEEN INADEQUATE

Your own board was forced to rescind your March 2025 approvals following litigation by the Tonawanda Seneca Nation and the Sierra Club. The New York State Department of Environmental Conservation has since directed GCEDC to conduct a Supplemental Environmental Impact Statement, the first time DEC has ever taken this step for the STAMP site. DEC also identified numerous gaps and inconsistencies in STREAM's submitted plans. **This is the state's environmental agency formally telling you that the review conducted so far is not sufficient. Approving this project before that process is completed would be a serious failure of your mandate to protect the public interest.**

THE ENVIRONMENTAL AND HEALTH IMPACTS ARE REAL AND DOCUMENTED

A third-party study by Applied Economics Clinic, commissioned independently and not by the developer, found that STREAM's proximity would negatively impact the Iroquois National Wildlife Refuge and the Tonawanda Seneca's Big Woods.

The facility would consume 500 megawatts of power, enough to supply every residence across Monroe, Genesee, Wyoming, Livingston, and Orleans counties combined, driving up electricity rates for every resident in our region. Data centers rely on diesel backup generators that emit fine particulate matter and nitrogen oxides (NOx), both documented respiratory and cardiovascular health hazards. There is no safe level of exposure to fine particulate matter. It is classified as a non-threshold pollutant. Continuous low-frequency noise from cooling infrastructure will, as Tonawanda Seneca spokesperson Grandell Logan has stated clearly, inevitably change how animals behave on territory the Nation depends on for their way of life. Any contamination event affecting ground or surface water threatens the Nation's drinking water, as Chief Jonathan has warned under sworn affidavit. **The project sits less than a mile from a federally protected ecosystem. No landscaping commitment changes that reality.**

THE ECONOMIC JUSTIFICATION DOES NOT HOLD

GCEDC was established with a promise of 9,000 good-paying jobs at STAMP. To date, that number stands at zero. STREAM's proposal would create 125 permanent positions and requests $810 million in tax incentives to do so. That is $6.4 million per job. This is not economic development. **This is a subsidy to a Texas-based company majority-owned by a multinational private equity firm, paid for by Genesee County taxpayers. The board owes this community a far better answer than that.**

A NOTE AS SOMEONE IN THE AI INDUSTRY

I work with AI tools daily and I understand their value. I also understand their infrastructure demands, and I want to be direct: the way data centers are built today is an industry compromise, not a permanent solution. It is a "good enough for now" approach. History has shown us, from landing on the moon to electric cars to the phones in our pockets, that human ingenuity rises to meet pressure. If communities like ours continue to push back, the industry will be forced to develop cleaner, more efficient alternatives that can benefit everyone. Approving this project now does not put Genesee County ahead of the curve. It locks us into yesterday's infrastructure and shuts the door on what comes next.

More than 2,500 individuals and organizations have already submitted written comments opposing this project. The people of this region are speaking clearly.

I respectfully but firmly urge the GCEDC Board of Directors to deny approval for the STREAM U.S. Data Centers project at STAMP, to honor the sovereignty and treaty-protected rights of the Tonawanda Seneca Nation, and to pursue a vision for Genesee County that does not come at the expense of the people already living there.

Thank you for your time and your responsibility to this community.

Sincerely,
Hanna Skubis

Subject: Data Center Comment

Data centers across the country are already taking in wild amounts of energy that is guaranteed to them at lower rates than what private citizens can get. This cost deficit is passed back on to the citizens, and causes a ripple effect in energy prices extending out from where a data center is built. For the sake of equity, conservation, and being a good neighbor, this data center cannot be built.

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Ezra Elwell

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

We know that data centers take a lot of electricity, but also that they do damage to the environment, so adding more data centers is making it more difficult to meet our legal requirement to reduce our fossil fuel footprint in NYS. Plus it is so important for us to have a healthy environment for our own health. We must stop this data center before it gets started.

Sincerely,

streampublichearing@gcedc.com

Please do not add another cost, another complicated matter, to our community. We are already dealing with so much in this current climate and adding unhealthy spaces is not adding to our quality of life.

Thank you.

Sincerely,

Jasmine Castillo

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

The entire STAMP site and project is poorly conceived, poorly located, and deeply unethical, given that it borders the lands of the Tonawanda Seneca Nation, and several important, pristine ecological lands and preserves. STAMP is bad for our economy, our environment, and for equity-- and the data center is nothing more than a desperate attempt to salvage a fatally flawed development project and development site.

Sincerely,

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

After reviewing materials regarding the STREAM data center, I have concerns regarding the environmental implications of this project, and the impacts that it will have on the surrounding

neighborhood. I have other concerns as well, but I am going to lend a voice to the nearby residents to whom harm could come from living nearby such a site.

Western New York is rife with pollution from past industry; I know this first hand, as I live less than a half mile from both a New York State Superfund site (site ID 915149) and a Brownfield site (site ID C915233). These sites both arose from an industrial past where proper precautions weren't taken with regards to hazard management, and require ongoing monitoring and remediation efforts to keep our working-class neighborhood safe. To anyone that supports large scale industrial projects like this data center, I want to ask: would you choose to live in the neighborhoods surrounding this project? Would you raise your children there? And be honest with yourself when answering these questions.

Respectfully,
Lisa Hansen

Sincerely,

Lisa Hansen

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Kenneth Edward Warren

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: STREAM Data Center and STAMP Comment
Attachments: STAMP Comment 2026.04.16.pdf

The Western New York Land Conservancy's comment is below and attached as a PDF. Thank you.

Hello. My name is Marisa Riggi and I am the Executive Director of Western New York Land Conservancy, a non-profit land trust with a mission to permanently protect land with significant conservation value for the benefit of future generations. The proposed data center at the STAMP site will irreparably harm the conservation values the Land Conservancy exists to protect – the farms, forests, wildlife habitat, and natural resources that we all depend on for our survival. We oppose the financial incentives request submitted by STREAM US Data Centers and request that GCEDC follow all of NYS DEC's recommendations.

The STAMP facility sits at a critical bottleneck in the Western New York Wildway—a mapped wildlife corridor essential for biodiversity, species movement, water protection, and climate resilience. Built in partnership with more than 70 organizations, the Wildway connects forests and core habitats, enabling plants and animals to move, adapt, and survive in a changing climate. This site is one of the last remaining safe passages linking the Southern Tier's forests to the shore of Lake Ontario. It is vital to species that depend on Iroquois National Wildlife Refuge, Tonawanda Wildlife Management Area, Oak Orchard Wildlife Management Area, and the Big Woods. The damage from this project would be profound and irreversible. It must not proceed.

Instead of birdsong and leaves rustling in the wind, our ears will only hear the endless hum of cooling fans, diesel powered generators, and semi trucks. Instead of quiet nights under dark skies, light pollution will outshine the stars and change wildlife activity for miles around. The once endangered bald eagles who are now thriving here will again lose their habitat and home.

Eleven hundred acres of farmland were removed from production when GCEDC acquired this land. According to the USDA, 98% of the STAMP site has highly productive agricultural soils. Soils like these are a finite resource. It takes generations to form soils of this quality for the production of food. Instead of growing fresh, local food for our families, the soil will be covered with the equivalent of 40 football fields of impervious surface – pavement and rooftops.

The amount of water and energy that will be needed to meet the data center's cooling needs is immense. This facility will require diesel trucks to haul 12,500 gallons of wastewater to Oakfield every single day. In a region where water resources are already strained and energy costs are rising; this will further strain the natural resources we rely on. Oak Orchard Creek supports a significant fishery for Lake Ontario and serves as an important regional economic driver. Any added stress or risk to water quality raises serious ecological and economic concerns.

Our region is already under immense pressure for energy development to meet the state's renewable energy goals and ever-growing electrical needs. While we rarely comment on those proposals, this project is different. The data center here would consume a fifth of the clean energy produced by Niagara Falls. To make up the difference, countless other lands and open spaces will be at risk of development.

There are less impactful sites for a data center throughout WNY, including brownfields. Places where wildlife was driven out long ago, and that are ripe for redevelopment. Why not revitalize those sites and stop the irresponsible siting of this development next to places of such ecological and cultural significance?

We strongly oppose this development and encourage GCEDC and all involved to rethink STAMP.

Permanently protecting land with significant conservation value in Western New York, for the benefit of future generations.

The Western New York Land Conservancy cannot provide legal or financial advice.

WESTERN NEW YORK
LAND CONSERVANCY

April 16, 2026

Hello. My name is Marisa Riggi and I am the Executive Director of Western New York Land Conservancy, a non-profit land trust with a mission to permanently protect land with significant conservation value for the benefit of future generations. The proposed data center at the STAMP site will irreparably harm the conservation values the Land Conservancy exists to protect – the farms, forests, wildlife habitat, and natural resources that we all depend on for our survival. We oppose the financial incentives request submitted by STREAM US Data Centers and request that GCEDC follow all of NYS DEC's recommendations.

The STAMP facility sits at a critical bottleneck in the Western New York Wildway—a mapped wildlife corridor essential for biodiversity, species movement, water protection, and climate resilience. Built in partnership with more than 70 organizations, the Wildway connects forests and core habitats, enabling plants and animals to move, adapt, and survive in a changing climate. This site is one of the last remaining safe passages linking the Southern Tier's forests to the shore of Lake Ontario. It is vital to species that depend on Iroquois National Wildlife Refuge, Tonawanda Wildlife Management Area, Oak Orchard Wildlife Management Area, and the Big Woods. The damage from this project would be profound and irreversible. It must not proceed.

Instead of birdsong and leaves rustling in the wind, our ears will only hear the endless hum of cooling fans, diesel powered generators, and semi-trucks. Instead of quiet nights under dark skies, light pollution will outshine the stars and change wildlife activity for miles around. The once endangered bald eagles who are now thriving here will again lose their habitat and home.

Eleven hundred acres of farmland were removed from production when GCEDC acquired this land. According to the USDA, 98% of the STAMP site has highly productive agricultural soils. Soils like these are a finite resource. It takes generations to form soils of this quality for the production of food. Instead of growing fresh, local food for our families, the soil will be covered with the equivalent of 40 football fields of impervious surface – pavement and rooftops.

The amount of water and energy that will be needed to meet the data center's cooling needs is immense. This facility will require diesel trucks to haul 12,500 gallons of wastewater to Oakfield every single day. In a region where water resources are already strained and energy costs are rising, this will further strain the natural resources we rely on. Oak Orchard Creek supports a significant fishery for Lake Ontario and serves as an important regional economic driver. Any added stress or risk to water quality raises serious ecological and economic concerns.

Our region is already under immense pressure for energy development to meet the state's renewable energy goals and ever-growing electrical needs. While we rarely comment on those proposals, this project is different. The data center here would consume a fifth of the

clean energy produced by Niagara Falls. To make up the difference, countless other lands and open spaces will be at risk of development.

There are less impactful sites for a data center throughout WNY, including brownfields. Places where wildlife was driven out long ago, and that are ripe for redevelopment. Why not revitalize those sites and stop the irresponsible siting of this development next to places of such ecological and cultural significance? We strongly oppose this development and encourage GCEDC and all involved to rethink STAMP.

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Prioritize humans and wildlife please.

Sincerely,

Sarah Cedeno

Re: STREAM U.S. Data Centers SEQR & Financial Incentives Applications –
Tonawanda Seneca Nation Preliminary Comments

Nya:wëh Sgë:nö',

On behalf of the Tonawanda Seneca Nation, Council of Chiefs, I extend greetings to you and your associates and give thanks that all are enjoying good health.

In the mid-1800s, land speculators attempted to take by fraudulent treaty the entire territory of the Tonawanda Seneca Nation, which had been confirmed to the Nation by Federal law decades earlier. Tonawanda land still used and occupied by our people was "sold" and our right to our ancestral territory – where our children were born and our elders buried – called into question. Our ancestors, the leaders and citizens of the Nation at the time, fought with all they had to preserve and protect our land, even filing a lawsuit that went all the way to the Supreme Court. We won that case and still were forced to confront the bitter reality that some of our lands would now be considered property of non-Indians and no longer part of the Tonawanda Seneca Nation. The STAMP site occupies a portion of those lands.

The importance of this land, which sits next to our federally-protected Reservation Territory, has not changed to us simply because we are no longer considered to "own" it. This land is part of our ancestral territory and a source of responsibility for our people, who must do whatever they can to protect it. We believe we have a moral duty to this land, both for our ancestors who came before us and for future generations to come. We reject the idea that this land should be sacrificed for profit and that the significant environmental and cultural impacts of a data center at STAMP should be accepted.

The Nation has reviewed materials submitted by STREAM U.S. Data Centers to GCEDC, the Town of Alabama, and DEC in relation to STREAM's SEQR and financial incentives applications, site plan application, Air State Facility permit application, and proposed Stormwater Pollution Prevention Plan for its proposed "Double Reed" data center complex at STAMP. The Nation understands that discussions among these agencies and STREAM are ongoing. In addition, GCEDC has provided to the Nation a Phase IB Archaeological Survey report related to assessment of impacts from the acquisition by STREAM of a parcel on Crosby Road as a part of STREAM's data center project, and requested comments be provided by April 29, 2026.[1] On April 8 the Nation discovered that the revised SEQR Application dated April 6 was posted on GCEDC's website. The application and associated information appear to comprise over 200 pages of new information that must be carefully reviewed and analyzed. Moreover, on April 6, DEC informed STREAM's consultants, Ramboll, that its application for an Air State Facility permit, necessary for the data center complex's operations, would be subject to the Environmental Justice Siting Law (EJSL), Climate Leadership and Community Protection Act (CLCPA) and Commissioner's Policy on Environmental Justice, CP-29, which requires enhanced public participation measures, including measures specific to the Nation required by a Letter of Resolution agreement among DEC, GCEDC, and other agencies. In addition, on April 9, DEC provided to the Nation STREAM's submissions in response to the April 6 letter, submissions that bear on SEQR issues as well as analysis pursuant to the CLCPA, EJSL, and CP-29.

In addition to information just recently received and not yet fully analyzed by the Nation, foundational information needed for assessment of impacts from STREAM's facility and previously requested by the Nation months ago is still missing. For example, in February, GCEDC responded to Nation questions (numbered 6 and 12 below) as follows:

6. What additional geotechnical and noise studies has STREAM completed since its 2024 application? Please provide the results of these studies for our review.

   GCEDC Response: *Stream is currently undertaking detailed geotechnical and noise studies and those reports will be provided to the Nation once they are received by the GCEDC.*

[1]As the Nation has repeatedly stated and DEC has confirmed, assessment of impacts from the STREAM data center project on the Nation's cultural resources must be considered as a part of SEQR review. *See, e.g.*, Letter of DEC to GCEDC (Jan. 28, 2026)("[T]he applicant must prepare an Initial Assessment (IA) of each element of the STAMP project to evaluate whether or not it will have an adverse impact to the Tonawanda Seneca Nation's Territory as a property of religious and cultural significance" and "DEC strongly recommends that the lead agency or applicant receive an effect letter [from the State Historic Preservation Office] prior to GCEDC making a SEQR determination for the Project Double Reed project.").

12. What types of dewatering will be required to support construction and operation of the data center complex, and how will impacts to local residents and to the hydrology of the Nation's Reservation Territory be assessed?

GCEDC Response: *GCEDC has requested this information from Stream and will provide the information to the Nation once it has been received by the GCEDC.*

GCEDC Letter of February 9, 2026. The Nation has not yet received the requested information.[2]

Likewise, GCEDC has not responded to the Nation's April 3 request for information about STREAM's apparent plans to conduct demolition work on the Plug Power site, plans the Nation only learned about due to local news reports.[3]

Under these circumstances and for all these reasons, the Nation reserves the right to submit further comments on the April 6 revised SEQR Application and related materials once the Nation has reviewed and analyzed these materials and all additional materials required in order to assess the STREAM project's impacts.

In submitting these comments, the Nation requests once again that GCEDC formally rescind and apologize for its stated position that information from the Nation "will do nothing to change the actual analysis of impacts to the Nation's Territory." (GCEDC Letter of March 1, 2024 at 6). GCEDC's refusal to disavow this outrageous and unlawful position lays bare the fact that

[2] While the April 6 Geotechnical Summary indicates that additional geotechnical testing was completed by STREAM in February of 2026, it does not indicate where test bores or test pits were located, to what depth, or what the results were for each test or provide any information whatsoever about the "Seismic Cone Penetration Tests (SCPTu)" or the "Multichannel Analysis of Surface Waves (MASW) survey" purportedly carried out. Instead, simply makes sweeping generalizations like "[t]he investigations reveal a consistent and favorable subsurface profile for large-scale development" and "Groundwater levels are generally expected to be found between 10 and 15 feet below grade." These claims are particularly concerning given STREAM's repeated contention that no wetlands exist on the parcels where they propose to build a data center complex. *See* discussion below; see also Bowman Engineers Report of April 2, 2026, at 1 ("there are no delineated wetlands on the subject property"). Compare Letter of DEC, March 30, 2026 (finding jurisdictional wetlands on both the North and South campus parcels and indicating that DEC's amended wetlands regulations will apply to construction of the STREAM facility).

[3] The Nation's questions, which relate to protection of its treaty-confirmed natural resources, included:

- What permits and/or approvals are needed for the removal of the spheres?
- Will the spheres be destroyed, dismantled, moved intact, or something else?
- When will this work occur, for how long, and during what hours of the day?
- What noise impacts will be created by this work, and will it involve explosions, jackhammers, and/or other loud noises?
- To what extent will work by STREAM on the Plug Power parcel facilitate STREAM's proposed data center construction there?
- Will sphere removal on the Plug Power parcel assist STREAM in site preparation for its proposed data center?
- How will Plug Power, STREAM, and GCEDC ensure there are no adverse impacts on the Nation from noise, dust, runoff, etc?

GCEDC has no intention whatsoever of altering any of its plans in response to Nation concerns.[4] Instead, GCEDC continues to maintain that no project at STAMP will ever adversely affect the Nation; that the Nation's assessment of impacts is nothing more than – as GCEDC puts it -- "the Nation's feelings;" and that GCEDC's opinions about impacts render the Nation's irrelevant.[5]

I. GCEDC Should Conduct a Supplemental Environmental Impact Assessment for STREAM and for STAMP as a Whole

The Nation reiterates a call it has made countless times over the course of the last decade: GCEDC must conduct a supplemental EIS for STAMP, working with appropriate experts and the Nation to ensure that impacts on the Nation, the Nation's environment, and the Nation's cultural resources, are adequately assessed, as described more fully below. DEC recently issued this recommendation to GCEDC as well, noting the need to address new laws and changes in circumstances.[6]

In addition, the Nation urges GCEDC to conduct a supplemental EIS for STREAM specifically, working with appropriate experts and the Nation to ensure that impacts on the Nation, the Nation's environment, and the Nation's cultural resources, are adequately assessed.[7] The SEIS should, at a minimum, incorporate the elements raised by the Nation in these comments and the comments submitted by the Nation on January 30, 2025; those raised by the Sierra Club in 2025 and 2026; and those outlined by the Department of Environmental Conservation (DEC) in its letters of January 28, 2026, and April 6, 2026.

GCEDC's supplemental reviews should include assessment of direct, indirect, and cumulative impacts on archaeological, cultural, environmental and historic resources of the Nation, and should incorporate reviews required under Section 14.09 as a part of SEQR rather than separately, a recommendation DEC also supports.[8] And the reviews must provide information

---

[4] GCEDC refuses to rescind the statement, instead deeming the Nation's concerns "a misunderstanding" and apologizing not for GCEDC's statement, as the Nation has requested, but for "any offense this may have caused." *See, e.g.* GCEDC Letter of February 27, 2025; GCEDC Letter of February 9, 2026 (doubling down on GCEDC's statement that projects at STAMP "will have absolutely no impact to the Nation's Territory," regardless of Nation views).

[5] *Id*.

[6] DEC Letter of January 28, 2026 ("The Department [] recommends that a supplemental EIS be prepared for the STAMP site to address new laws and regulations (such as the Environmental Justice Siting Law and the revised 6 NYCRR Part 664 Freshwater Wetlands Regulations) and to evaluate updates to the STAMP Site, its goals, its tenants, and any other originally unanticipated changes in how the STAMP Site is being developed.")

[7] *See also* DEC Letter of January 28, 2026, ("DEC recommends a supplemental Environmental Impact Statement (SEIS) be prepared for data centers as their impacts do not appear to have been adequately addressed in GCEDC's 2012 GEIS or its subsequent updates, which should be published on a publicly available website, in accordance with 6 NYCRR 617.12(c)(5).")

[8] DEC letter of January 28, 2026.

specific to the roughly five year period during which the facility will be constructed, as well as the operations period that will follow.[9]

The reviews should incorporate and fully implement the requirements of the EJSL and CLCPA, as discussed more fully below, including the disadvantaged communities burden analysis.[10] Because this analysis will find that STREAM would cause or contribute to a disproportionate pollution burden on the Nation, GCEDC should refrain from issuing any resolutions in support of the project or providing any financial incentives to it.

Likewise, GCEDC should provide an additional public hearing based on final submissions and any additional studies (i.e. GCEDC noise study) to allow the Nation and community members to weigh in on SEQR issues. While not required, a public hearing to consider final submissions, not just preliminary ones, is not prohibited and is especially appropriate where, as here, the community has raised significant questions and concerns about the project.[11]

II. GCEDC and STREAM Must Conduct Robust Disadvantaged Communities Analysis in Consultation with the Nation

The EJSL requires that during SEQR review, lead agencies consider the potential impacts of an action on disadvantaged communities (DAC) and whether the action may cause or increase a disproportionate pollution burden on a DAC. N.Y. Env't Conserv. Law § 8-0109. If an action may cause or increase the burden on a DAC, it is considered an indicator that the action will have a significant adverse impact on the environment. N.Y. Env't Conserv. Law § 8-0109(2)(k); 6 NYCCR 617.7 (*proposed regulations).*

The proposed regulations implementing the EJSL provide that for SEQR purposes, pollution is defined as "the presence in the environment of conditions and or contaminants in quantities of characteristics which are or may be injurious to human, plant or animal life or to property or which unreasonably interfere with the comfortable enjoyment of life and property throughout such areas of the state as shall be affected thereby." 6 NYCCR 617.1(ae) (*proposed regulations).* For the Nation, conditions and contaminants that negatively impact treaty-protected resources and traditional ways of life unreasonably interfere with Nation citizens' comfortable enjoyment

---

[9] *Id.*

[10] *See also* DEC letter of April 6, 2026 (pointing out as a courtesy that the CLCPA and EJSL apply to STREAM by virtue of its Air State Facility permit application and require that a CLCPA 7(2) analysis and an EJSL existing burden report must be provided as a part of the application.)

[11] See, e.g.: https://investigativepost.org/2026/03/20/residents-to-genesee-ida-reject-data-center-tax-breaks/ and https://www.thedailynewsonline.com/news/watch-tonawanda-seneca-nation-members-residents-blast-data-center-proposal/article_28f4ec91-0ef5-4815-afdc-62c4e82957d9.html

of life and property and therefore must be considered as part of the pollution burden analysis under SEQR.

As DEC indicated in its letter of April 6, 2026, to STREAM U.S. Data Centers' consultant, Ramboll, "[u]nder the Environmental Justice Siting Law (EJSL)…, new projects subject to ASF permitting [like the STREAM project] that may cause or contribute more than a de minimis amount of pollution to any disproportionate pollution burden on a disadvantaged community (DAC) require the submission of an EBR." As the DEC letter points out, the EBR must assess "the environmental or public health stressors already borne by the disadvantaged communities as a result of existing conditions located in or affecting the disadvantaged communities."

The DAC Burden Assessment (Assessment) prepared for STREAM falls far short of the requirements for SEQR analysis under the EJSL. This is true for at least five reasons: first, the Assessment fails to properly identify the boundaries of the Nation and to consider the entirety of Nation territory. This is because the Assessment fails to recognize that the Nation is designated a Disadvantaged Community based not on census tracts but on its status as a sovereign Indian Nation subject to unique pollution burdens. Second, the Assessment and the SEQR Application as a whole fail to provide sufficient information to adequately assess the extent of the proposed additional pollution burdens to be created by the project because – as described more fully below – it leaves out or provides contradictory information in virtually every SEQR assessment category about how exactly the project will work. Third, the Assessment fails to comply with the EJSL by conflating regulatory compliance with calculation of "*the potential or projected contribution of the proposed action* to existing pollution burdens in the communities" as required by the EJSL (emphasis added).[12] This distinction is critical to the EJSL because even pollution that might otherwise be allowed under applicable regulations may contribute to a disproportionate pollution burden. This distinction goes to the very heart of the EJSL, which is premised on the Legislature's finding that "there has been an inequitable pattern in the siting of environmental facilities in minority and economically distressed communities, which have borne a disproportionate and inequitable share of such facilities." S.B. 1317 / A.B. 1286 (2024).

[12] *See, e.g.*, April 6, 2026 Assessment at 26, "Regulatory compliance is based solely on dBA noise levels, which are designed to reflect how the human ear perceives sound across different frequencies. Since the governing standard does not reference dBC levels or require evaluation of low frequency noise through the C-weighting scale, there is no obligation to assess dBC as part of demonstrating compliance." Whatever relevant regulations may say about evaluation of low frequency noise – and in fact the Town of Alabama Zoning Code prohibits "noxious" noise of all kind, high and low frequency – there can be no doubt that (1) "demonstrating compliance" is an entirely different task than calculating potential/projected contributions to pollution; and (2) low frequency noise can be noise pollution and can contribute to a pollution burden. *See also id.* at 24 ("Based on the findings of the noise assessment and modeling *and the use of the GEIS/Findings for the STAMP project*, Project Double Reed is not anticipated to impact the nearby residential receptors or the Tonawanda Seneca Nation and therefore, will not have any disproportionate burden.") (emphasis added).

Fourth, the Assessment fails to comply with the EJSL's requirements because it completely ignores potential effects of the proposed action on the Nation and how those effects may cause or increase the specific disproportionate pollution burden already felt by the Nation.

And fifth, the Assessment fails to satisfy the requirements of the EJSL because it includes and is based on false information within Census Tract 36037940100. As a clarifying point, Nation citizens (like all traditional Haudenosaunee Nations) do not participate in the Census. Because Nation Census participation is nonexistent, the accuracy of the information presented in the Tract does not reflect the Nation demographics. For example, the Census states that the number of Asian residents in the Nation's Tract is higher than 40% of other tracts in the State, which is blatantly wrong. [13] The purported information conveyed by the Tract is erroneous and cannot serve as the foundation for any analysis. See also the risk indicator score of "0" for "Project Flooding in Inland Areas" despite the fact that large swaths of the Nation routinely flood and lie within the 100-year flood plain. *See* Nyblade Map attached.

Double Reed should not be permitted to move forward absent a thorough review of the potential impacts to the Nation, its citizens, and treaty-protected resources, all of which are required to be analyzed under the EJSL.

The Nation territory is identified as a DAC based on its unique status as land owned by a sovereign Indigenous Nation, not solely due to the standard DAC criteria scores or as defined by census tract.[14] This is an important distinction, as it recognizes the history of discrimination and associated negative impact caused to treaty-protected resources and traditional ways of life for Indigenous Nations, and the fact that these negative impacts may not be adequately captured through the standard DAC criteria. Given this distinction, and the broad definition of pollution under the EJSL, it is critical that when completing a DAC Burden Assessment for an action that may impact an Indigenous Nation, the unique pollution burdens that interfere with a Nation's treaty-protected resources and traditional ways of life are addressed.

On numerous occasions, the Nation has outlined to GCEDC and STREAM the pollution burdens that unreasonably interfere with the Nation's traditional way of life and treaty-protected resources. Despite this, the STREAM DAC Burden Assessment fails entirely to address these burdens. As the Nation outlined in its January 30, 2025, letter to GCEDC regarding its first data center proposal, the burdens felt by the Nation include, but are not limited to:

[13] *See also* Assessment at 13 (improperly limiting the required "within one mile" zone to areas within a mile of STREAM's South Campus and excluding areas within a mile from its North Campus).

[14] New York State Climate Justice Working Group 2023 Disadvantaged Communities Criteria Final Report at 23.

1. Limited access to and contamination of treaty-protected resources, including habitats used for subsistence hunting and fishing;
2. Lack of access to clean water systems and reliance on wells resulting in a heightened risk of contamination;
3. Heightened rates of illness and disease in the community; and
4. Dispossession of lands, including locations of ceremonial value.

The Nation expanded on these elements in affidavits submitted as part of the 2025 Article 78 litigation, to which STREAM was a party. *See* Attached. The January 2025 letter and Article 78 affidavits address potential pollution burdens discussed more fully below, including burdens related to noise, light, air emissions, water resources, visual impacts, emergency services, and more. Despite the Nation specifically identifying these items as pollution burdens that unreasonably interfere with Nation's comfortable enjoyment of life and property in these public documents, STREAM's SEQR application fails entirely to address the impact of the proposed data center complex on these burdens.

The purpose of the EJSL is to "ensure no community bears a disproportionate pollution burden, and to actively reduce any such burden for all communities." The STREAM DAC Burden Assessment fails utterly to achieve this purpose, as it ignores specific burdens placed on the Nation across a wide range of categories of pollution.

We reiterate that an adequate assessment of the effects the project may have on the pollution burdens already faced by the Nation and its citizens, as well as the nature of new pollution burdens to be created by the project, must take account of the unique stressors felt by the Nation and cannot be limited to an assessment of the baseline criteria used to designate a community as a DAC.[15] The Assessment fails to do so, limiting its consideration to the DACs criteria.

As the Nation has previously stated, the environmental and public health stressors felt by the Nation include, but are not limited to:

1. Lack of access to traditional foods, medicine, and resources necessary for ceremonial items;
2. Limited access to habitats with treaty-protected resources, including hunting and fishing locations;
3. Lack of access to locations of ceremonial and cultural value;

[15] *See* N.Y. Env't Conserv. Law § 70-0118(5)(b)

4. Industrialization and urban development of ancestral lands and locations of ceremonial and cultural value;
5. Contamination and degradation of soil and water resources;
6. Reduced and degraded habitat and ambient conditions for wildlife on and around Nation territory, including species of special cultural importance; and
7. Heightened levels of disease, illness, and mortality.

Lead agencies cannot ignore the impacts of a proposed action on disadvantaged communities and are required to make a specific finding on how the project may cause or increase a disproportionate pollution burden.[16] Moreover, as to STREAM, "[DEC] shall not issue a new ASF permit if it determines that the project will cause or contribute more than a de minimis amount of pollution to a disproportionate pollution burden on either of the two impacted DACs."[17]

The Nation's status as a DAC; the wide range of pollution burdens imposed by the STREAM data center complex, which vastly exceed the EJSL's "de minimis" threshold; and the law's prohibition on projects contributing to pollution burdens on the Nation mean this project cannot go forward and should be rejected.

III. STREAM's Double Reed Facility Would Have Significant and Wide-Ranging Negative Impacts on the Nation and the Environment

Even given the questionable and internally contradictory information on the projects provided thus far, the data center projects create a number of serious concerns for the Nation and require further review in order to fulfill SEQR's requirements. These concerns include but are not limited to the following:

A. Noise

The Nation incorporates by reference the report of Les Blomberg, which raises key technical deficiencies with STREAM's acoustic modeling and points out flaws and inconsistencies in plans for noise mitigation. The issues raised by Mr. Blomberg must be addressed prior to completion of SEQR review, as do issues specific to the Nation, which should be considered both as part of the SEQR review and the EJSL analysis for the project.

[16] ECL Section 8-0109(2)(k)

[17] *See also* DEC Letter of April 6, 2026 ("Under the EJSL, the Department shall not issue a new ASF permit if it determines that the project will cause or contribute more than a de minimis amount of pollution to a disproportionate pollution burden on either of the two impacted DACs."). *See also* N.Y. Env't Conserv. Law § 70-0118(3)(b)

Excessive noise exposure such as that created by the constant humming or buzzing from data centers causes a range of health harms including headaches, stress, and sleep disturbance,[18] and can also harm other species. In more extreme cases, noise pollution can cause tinnitus, migraines, vertigo and hearing loss.[19] A recent class action lawsuit filed in Erie County by residents living near the Digipower X facility in North Tonawanda described the noise created by the data center's cooling infrastructure as "pervasive, inescapable, and unbearable." *The Buffalo News*, April 8.[20] The suit was filed on behalf of residents as far as three miles away from the data center and alleges that sound walls are inadequate to mitigate chiller fans that "produce a loud, droning, and persistent noise – including low-frequency sound that manifests like vibrations – that can be heard and felt throughout [neighborhood] properties." *Id*. Yet despite these well-documented impacts from low-frequency noise emitted by data centers, STREAM's SEQR application takes the position that low-frequency noise need not be studied, stating simply that its acoustics study does "not incorporate dBC or C-weighted metrics for this specific evaluation" because "our compliance process remains focused on the A-weighted criteria defined by the governing body."[21] Analysis of noise impacts from Double Reed, however, must include assessment of low-frequency noise.

Likewise, STREAM's noise analysis submission fails to consider noise impacts on Nation cultural practices, including but not limited to hunting and ceremonies. This is true despite the fact the Nation first raised concerns about noise impacts on cultural practices with GCEDC ten years ago, and raised these concerns specifically in relation to STREAM's first data center proposal in 2025.

Even after four iterations of its plans for a data center project at STAMP and a year and a half of planning, STREAM's site plans for Double Reed remain speculative and conceptual as to how exactly noise mitigation will work. The April 6 Site Plan states that ground-level sound screening walls surrounding the buildings and rooftop screening walls surrounding the chiller units have not yet been designed and will be "design[ed] by others," *see* Site Plan p. 3, while the Acoustics Technical summary states that rooftop screens will be 18 feet high and ground walls 20 feet high. *See* Acoustics Technical Summary at p. 1 ("Each of the three data centers (housing 60 chillers each) includes full-perimeter solid rooftop screens extending 18 feet above the roofline (approximately 64 feet total structure height) to mitigate chiller noise."). Variously, the acoustics analysis states that each building will have 60 chillers, for a total of 180 (Acoustics Technical Summary at 1) and/or that there will be "66 chillers per building, positioned on

[21] Acoustics Technical Summary Noise Modeling Results at 6

platforms 12 feet above roof level" (Noise Modeling Study at 6), suggesting that rooftop screens may not even reach as high as the tops of the chillers.[22]

In addition, the SEQR application includes no assessment of current ambient noise. And the application's casual assertions regarding the noise mitigation likely provided by vegetative screening are belied by DEC's Noise Guidance, which specifies that for mitigation to appreciably lower sound levels, it must be "dense vegetation that is at least 100 feet in depth" and which cautions that "if a vegetative screen does not currently exist, planting a vegetative screen may require 15 or more years of growth before it becomes effective."[23] Given that "the average lifespan of a data center is approximately 10-15 years,"[24] vegetative screening cannot be relied upon for noise mitigation at STREAM's Double Reed facility.

B. Light

Analysis of light impacts must include impacts on the Nation's ecosystem and cultural practices, including but not limited to hunting and ceremonies. The Nation has raised this issue previously on multiple occasions to GCEDC and specifically to STREAM in 2025, and yet STREAM's SEQR application materials contend that dark sky compliance means the facility's 24/7 industrial lighting will create no appreciable impacts of any kind.

To the contrary, artificial lighting harms wildlife and ecosystems, and the extent of these harms can be significant:

> Plants and animals depend on Earth's daily cycle of light and dark to govern life-sustaining behaviors such as reproduction, nourishment, sleep, and protection from predators. Scientific evidence suggests that artificial light at night has negative and deadly effects on many creatures, including amphibians, birds, mammals, insects, and plants…
>
> "Predators use light to hunt, and prey species use darkness as cover," [research scientist Christopher] Kyba explains. "Near cities, cloudy skies are now hundreds or even thousands of times brighter than they were 200 years ago. We are only beginning to learn what a drastic effect this has had on nocturnal ecology."

---

[22] *See, e.g.*, https://www.munters.com/en-us/products-cms/coolers-humidifiers/circlemiser/ (indicating that the chillers specified by STREAM are typically over 8 feet high).

[24] *See, e.g.*, https://utulsa.edu/news/data-centers-draining-resources-in-water-stressed-communities/; https://www.wsaw.com/2026/04/08/west-virginia-data-center-boom-draws-criticism-over-costs-resources/ ("The lifespan of a data center averages 15 years. By year 25, they are considered obsolete.")

> Glare from artificial lights can also impact wetland habitats that are home to amphibians such as frogs and toads, whose nighttime croaking is part of the breeding ritual. Artificial lights disrupt this nocturnal activity, interfering with reproduction and reducing populations.
>
> *Artificial Lights Have Devastating Effects on Many Bird Species*
>
> Birds that migrate or hunt at night navigate by moonlight and starlight… Artificial lights can cause them to migrate too early or too late and miss ideal climate conditions for nesting, foraging, and other behaviors.[25]

Likewise, light pollution – whether within or in excess of regulatory limits – brings harm to human health, as well:

> One of the results of light pollution is increased exposure to both indoor and outdoor artificial light-at-night (ALAN). Scientists are just beginning to understand the negative impacts that excessive nighttime light exposure can have on human health. The circadian clock, or 24-hour day/night cycle, affects important physiologic processes in almost all organisms. Disruption of these important biological processes are associated with sleep-wake disorders, psychiatric disorders, cardiovascular diseases, immunological disorders, metabolic disorders, obesity and cancer progression. Studies show that the circadian system is most sensitive to short wavelengths, such as blue-rich light emitted from LED lighting at night time.[26]

And despite STREAM's claims, any mitigation of light pollution provided by vegetation in the Big Woods will be absent for roughly half of each year, as deciduous trees and brush are typically bare from October through April.

C. Wildlife

Noise pollution and vibration associated with data centers can disrupt animal behavior and communication and force animals to seek new migration and habitation patterns.[27] Noise from

the data centers would affect wildlife in the adjacent Big Woods, where Nation citizens practice subsistence and ceremonial hunting of deer, turkey, squirrel, pheasant, rabbit and other species. Moreover, migratory species like hawks hold specific cultural importance to the Nation, and their movements on and near Nation territory would likely be significantly disrupted by data center noise.

STREAM's application also fails to adequately address specific impacts of chronic exposure to anthropogenic noise on the behavior, presence/absence, life cycle functioning, physiology, and interspecies interactions of specific wildlife species, nor attendant 'knock-on' community and ecosystem-level effects produced by species-specific impacts.[28] Additionally, emerging research documents illustrate that the combination of simultaneous noise and light pollution may produce synergistic impacts to terrestrial wildlife; thus both species-level and ecosystem-wide impacts must be assessed in a holistic manner.[29] STREAM's inadequate assessments do not even attempt to address such cumulative and synergistic ecosystem impacts - which may be magnified given the fragile and sensitive nature of the particular ecological communities and habitat types that would be most directly impacted by the proposed data center complex.[30]

STREAM's SEQR application, however, fails not only to examine impacts on specific species and interspecific relationships, but also to identify species actually present on project parcels, instead referencing information from the DGEIS that is nearly 15 years old.[31] Moreover, STREAM claims – bizarrely and with no supporting documentation of any kind – that "development of the Project will force deer and turkey to avoid the North and South Campuses, pushing them toward undeveloped areas, such as the Nation's Territory, which is used for hunting."[32] In fact, the basis for this statement is not science but instead a bare directive from GCEDC in its Tech Team Memo of 3/31 that STREAM's submission "must be revised to state that development of the Project *will force deer and turkey to avoid the North and South Campuses, pushing them toward undeveloped areas, such as the Nation's Territory,* which is used for hunting." (emphasis added).[33]

[32] See 4/6 EAF, p. 13.

[33] March 31, 2026 Tech Team Memo at E.2.q.

Nor does STREAM address impacts to threatened, rare, and endangered species found on and around the Nation and STAMP. These impacts will not be limited to the STAMP site or to the area or particular species covered by the 2023 Part 182 permit. Threatened and endangered species in the area include the Short Eared Owl, Northern Harrier, Bald Eagle, Sandhill Crane, Tri-Colored Bat, Salamander Mussel, and Hellbender among others. Each of these species could be affected by noise and vibrations generated by data centers,[34] as well as by the microclimatic changes occasioned by the so-called 'data center heat island effect' (see below for additional detail).

Additionally, STREAM confirms Bald Eagles are present within the proposed project site and yet suggests no bar to construction and no state or federal permitting will be required. The Bald and Golden Eagle Protection Act (BGEPA), 16 U.S.C.§ 668, however, generally prohibits activities that would disturb eagles or their habitats. Under the Act, the meaning of "disturb" includes "to agitate or bother a bald or golden eagle to a degree that causes, or is likely to cause… a decrease in its productivity, by substantially interfering with normal breeding, feeding, or sheltering behavior, or…nest abandonment, by substantially interfering with normal breeding, feeding, or sheltering behavior." 50 C.F.R. § 22.3. [35]

Here, STREAM proposes to spend five years constructing a towering, 2 million square foot data center complex within confirmed eagle habitat, less than a mile from the Iroquois National Wildlife Refuge, a federal refuge established to "serve[] as an inviolate sanctuary for migratory birds and support[] diverse species of wildlife"-- and to conduct operations for decades after that with unknown and unstudied impacts on eagles. On its face, the BGEPA prohibits this project.

D. Ecology and Biocultural Impacts

Emerging research documents indicate that hyperscale data centers like Double Reed are associated with an average land surface temperature increase of 3.6 degrees Fahrenheit, with maximum increases up to 9 degrees, with the most significant impacts to temperatures found in the surrounding 1.5 to 2 mile radius.[36] This "data center heat island effect" could significantly impact ecological functioning, air quality, water quality, and public health on Nation Territory.

---

[34] *See, e.g.*, Zhou et. al, Spectrally non-overlapping background noise disturbs echolocation via acoustic masking in the CF-FM bat, *Hipposideros pratti* , *Conservation Physiology*, Volume 11, Issue 1 (2023) at https://academic.oup.com/conphys/article/11/1/coad017/7136202 ("Our results provide further evidence of negative consequences [for bats] of anthropogenic noise. On this basis, we sound a warning against noise in the foraging habitats of echolocating bats").

[35] Moreover, ECL Part 182 requires that applicants proposing projects that may result in incidental take or adverse modification of occupied habitat for Bald Eagles apply to DEC for a permit.

[36] See https://arxiv.org/pdf/2603.20897 and https://www.newscientist.com/article/2521256-ai-data-centres-can-warm-surrounding-areas-by-up-to-9-1c/

Numerous herbaceous, amphibian, and avian species, including species of cultural and ecological significance found on Nation Territory, evince extreme sensitivity to even minor changes in temperature at both the individual organismal and population level.[37]

In particular, the life cycles of numerous forest floor dwelling and wetlandscape plant species, including the threatened *Carex frankii*, *Lithospermum latifolium*, and *Plantago cordata*, as well as various species of herbaceous ephemeral plant species - many of which are considered medicine plants by the Haudenosaunee - depend on phenological cues that are highly temperature and light sensitive.[38] Additionally, research associates heat island effects with population level health impacts, including increased mortality and incidence of respiratory disorders.[39] While STREAM's air permit application specifies that temperature at point of emission from each generator will be 878 degrees Fahrenheit, its SEQR application fails utterly in addressing the associated data center heat island effect or its numerous attendant impacts.

Furthermore, STREAM's application disregards ecological impacts from the proposed data center complex pertaining to the specific location of the STAMP mega industrial site within a massive wetlands and bottomland hardwood forest complex, which the Tonawanda Seneca Nation and other Haudenosaunee peoples have stewarded since time immemorial. Historically, this complex of remarkable biodiversity comprised 20,000 acres; it still is characterized by some of the most extensive intact and ecologically high-functioning expanses of habitat in the Great Lakes Bioregion - including multiple state and federally public protected lands in the immediate vicinity of STAMP. Ecologically, these lands, waters, and wetlands are connected with those on the Nation's Reservation Territory, and thus impacts to the larger bioregion will directly impact the Nation's capacity to exercise its treaty-protected rights to free use and enjoyment of its Territory - and not just for the present generation, but for the next seven generations and beyond.

The designation of the WNY Wildway, which includes within its boundaries the western half of the STAMP site, demonstrates the critical importance of these areas for regional and large-landscape conservation efforts.[40] A growing body of research documents both the negative impacts of large-scale industrial development on ecosystem-level functioning as well as the unique and increasingly salient value of large landscape conservation during a time of rapid ecological degradation caused by anthropogenic climate change.[41] Because the application from

STREAM addresses environmental impacts in siloed, superficial, and non-holistic manner - ie, contrary to the core tenets of sound ecological study - it utterly fails to account for wider bioregional and ecosystem-scale impacts from its proposed data center complex - including habitat fragmentation, geohydrological alterations beyond the STAMP site, and the extensive, bioregional radius of impact from operational noise as well the data center heat island effect. The construction and operational impacts of the proposed facility are likely to cause extensive irrevocable harm to habitats of unparalleled biocultural and conservation value within the Western New York Great Lakes Bioregion as well as irreparable harms to ways of life, including cultural and subsistence practices - that Haudenosaunee people have carried out in relationship with the lands and waters in question for countless generations.

E. Air Pollution

As a threshold matter, the STREAM submission lacks critical information related to air emissions. Until this information is provided, the impacts of BUFA Project Double Reed on the pollution burden affecting the Nation cannot be fully assessed. To accurately assess these impacts, information must be provided that not only indicates annual average emissions but also peak emissions levels; details regarding what the 200+ structures shown in the site plan application within the designated “gen yard” are and whether they have the potential to emit air pollution; considers possible emissions from refrigerants planned to be used in the nearly 200 rooftop chillers; considers construction-specific emissions; includes information regarding prevailing wind direction and wind speed at point of measure and more, as discussed below.

For example, DEC’s guidance DAR-21 states that the portions of a project that are subject to analysis include “any new or modified emission sources that have the potential to emit GHGs, including increases and decreases in emissions of GHGs from existing equipment. In addition, the scope of the analysis includes any upstream, downstream, and indirect GHG emissions known to be attributable to the Project, including upstream out-of-state emissions from fossil fuel production, transmission, and imported electricity.”

Under section 7(2) of the CLCPA and CP-49, in considering issuing any permit DEC is also required to consider the effect of the Project, which includes the impact of the 500 MW of power required by Double Reed - and not just the greenhouse gas emissions produced by its back-up generators - on the State's ability to meet its climate goals. Yet STREAM's analysis lacks any consideration of the source of that 500 MW or the effect it will have on other utility customers.

Moreover, as discussed below, regulatory compliance cannot be conflated with the question of whether the direct, indirect and cumulative impacts of air pollution from Double Reed on the Nation would be more than *de minimis* and thus barred by the EJSL and/or the CLCPA. More information and analysis are needed.

1. Refrigerants

STREAM's SEQR application lacks information about the potential air pollution impacts of the refrigerants used in Double Reed's rooftop chillers. These chillers require greenhouse gas refrigerants of the following types:

TMA Circlemiser chiller refrigerant options

Refrigerant		GWP	Class	Compressor
R513A	Standard refrigerant offering best efficiency and size up to 125°F ambient rating	631	A1	
R515B	Refrigerant option for extreme ambient temperature	293	A1	
R1234ze	Special option	6	A2L	

Such refrigerants are known to break down into hydrofluorocarbons (HFCs), powerful greenhouse gases with high global warming potential.[42]

According to experts:

> "In the event of a leak, the PFAS refrigerants vaporize… At least one company, Accelsius, is promoting cooling systems based upon low GWP fluorinated gases, arguing that trifluoroacetic acid is not a health hazard.[43] But there is strong evidence to the contrary. A team of European experts recently concluded otherwise: Trifluoroacetic acid (TFA) is a persistent and mobile substance that has been increasing in concentration within diverse environmental media, including rain, soils, human serum, plants, plant-based foods, and drinking water… Due to TFA's extreme persistence and ongoing emissions, concentrations are increasing irreversibly. What remains less clear are the thresholds where irreversible effects on local or global scales occur. There are indications from mammalian toxicity studies that TFA is toxic to reproduction and that it exhibits liver toxicity[44]."

[42] "Two Studies Confirm that HFO-1234ze(E) Breaks Down into Some HFC-23 in the Atmosphere," at https://naturalrefrigerants.com/news/two-studies-confirm-that-hfo-1234zee-breaks-down-into-some-hfc-23-in-the-atmosphere/

[43] Richard Bonner III, Bill Grieco, and Liz Cruz, "Understanding PFAS Concerns for Two-Phase Cooling of Data Centers", Accelsius, https://accelsius.com/wp-content/uploads/PFAS-Whitepaper-Feb_2024.pdf

[44] Len Siegal, *Every Click We Make: Tech's Hidden Environmental Impacts* at https://cpeo.org/pubs/EveryClick.pdf (quoting Hans Peter H. Arp et al, The Global Threat from the Irreversible Accumulation of Trifluoroacetic Acid (TFA), Environ. Sci. Technol. 2024, 58, p. 19925, https://pubs.acs.org/doi/10.1021/acs.est.4c06189)

Among other fundamental questions that must be answered prior to assessing whether and how BUFA would cause or contribute to a disproportionate air pollution burden on the Nation:

1. What quantities and CO2 equivalents, by refrigerant, will be used and released by the cooling system?
2. How often will the refrigerants be replenished?
3. What will happen to refrigerants intentionally removed from the cooling system?
4. What steps will be taken to reduce or eliminate fugitive emissions from refrigerants?
5. To what degree (quantity) will refrigerant emissions convert to trifluoroacetic acid (TFA), which can pollute land and water?
6. What quantity of fluoropolymers will be built into the data center?
7. Are any fluoropolymers anticipated to be released through machining, flaking or corrosion?
8. What will happen to the fluoropolymers when they are no longer needed?

2. Diesel Emissions / Greenhouse Gas / Associated Pollutants

Even without this missing information identified above, STREAM's application demonstrates that the project will create far more than *de minimis* additional pollution burdens on the Nation. According to the April 6 Environmental Assessment Form (EAF) (p. 7):

ii. As calculated in the air permit application, the proposed action has the potential to emit:

- ~6.2 Tons/year (short tons) of carbon monoxide (CO)
- ~1.2 Tons/year (short tons) of oxides of nitrogen (NOx)
- < 0.1 Tons/year (short tons) of particulate matter (PM-10, PM-2.5)
- ~0.34 Tons/year (short tons) of volatile organic compounds (VOC)
- < 0.10 Tons/year (short tons) of sulfur dioxide (SO_2)

i. Estimate the proposed action's metric tons of carbon dioxide equivalents in tons/year (metric): Approx. 1,056 (100-yr) ; 1,059 (20-yr)

EAF at 7.

More than a metric ton of Carbon Dioxide (CO2) per year; more than six tons per year of Carbon Monoxide (CO); more than a ton per year of Nitrogen oxides (NOx); and nearly a third of a ton per year of Volatile Organic Compounds: these are massive increases in pollution proposed for a location adjacent to the Nation and surrounding residences, with no information provided about peak emissions levels for each pollutant, which may significantly affect their impacts on human and animal health. And STREAM's DACs Assessment indicates that NOx emissions may be

forty times higher under the air permit STREAM seeks: "Specifically, the facility will 'cap by rule' in accordance with 6 NYCRR 201-4.5, limiting Oxides of Nitrogen (NOx) to *49.9 tons per year*," DACs Assessment at 25 (emphasis added)).

Double Reed's generators would run up to 500 hours per year – more than an hour each day. DEC has highlighted the negative health impacts of diesel fuel generation on disadvantaged communities, noting the role that particulate emissions – in addition to CO_2, NO_2, and N_2O – play in these impacts. "Nitrogen oxides or NOx (nitric oxide or nitrogen dioxide) are produced with black carbon [$PM_{2.5}$] when diesel and other petroleum-based fuels are burned. Exposure to NOx may irritate the respiratory tract and aggravate respiratory diseases such as asthma. Longer-term exposures to NOx may cause asthma and increase susceptibility to respiratory tract infections."[45]

Likewise, according to the United States Environmental Protection Agency, "exposures to elevated concentrations of NO_2 may contribute to the development of asthma and potentially increase susceptibility to respiratory infections. People with asthma, as well as children and the elderly are generally at greater risk for the health effects of NO_2. NO_2 along with other NO_x reacts with other chemicals in the air to form both particulate matter and ozone. Both of these are also harmful when inhaled due to effects on the respiratory system."[46]

According to the Federal Department of Health and Human Services, Native children are twice as likely to suffer from asthma as non-Hispanic white children.

Moreover, STREAM's assessment of Double Reed's emissions fails to take into account emissions from vehicles traveling to, from, and within the STAMP site during the four to five years (or more) of construction or the operational period following; or to provide sufficient information to determine exactly what those might be. And the April 6 SEQR application materials dramatically expand from earlier submissions the expected number of diesel truck deliveries to eight per day – as opposed to two to three per day in prior submissions – each requiring travel to and from the site, as well as an unspecified amount of idling time while onsite.[47]

As noted above, STREAM repeatedly conflates regulatory compliance with the analysis required by the EJSL, with particularly troubling results for air pollution analysis. For example, page 26 of the April 6 DACs Assessment compares projected Double Reed air pollution emissions with the 2012 STAMP DGEIS. But the DGEIS is irrelevant to CLCPA and EJSL analysis, which

[45] https://dec.ny.gov/sites/default/files/2024-07/camblackcarbon.pdf

[46] https://www.epa.gov/no2-pollution/basic-information-about-no2

[47] Notably, according to a transcript from the Town of Alabama Planning Board meeting of March 31, 2026, officials projected diesel truck trips to total up to 10 trips per day.

focuses on disproportionate pollution burden to a DAC and includes greenhouse gas emissions, which were not identified in the 2012 DGEIS.

F. Water Resources

The Nation relies on well water; STREAM facilities would be sited directly upstream from surface and groundwater sources for the Nation and adjacent to wetlands spanning the boundary between STAMP and the Nation.

As with other elements of its SEQR analysis, STREAM's analysis of impacts on water resources fails to include information required in order to fully assess impacts on the Nation from Double Reed.[48]

1. Wetlands

STREAM's SEQR application falsely states neither South nor North campus contain wetlands or streams of any kind. *See* EAF at 12.

In fact, there are multiple jurisdictional and non-jurisdictional streams and wetlands within the South and North property boundaries, something that has been known since the STAMP FGEIS and was recently affirmed by DEC, which issued positive jurisdictional determinations for the STAMP site on March 30, 2026.

Nor does the application address protections for wetlands, falsely stating that "there are no jurisdictional or non-jurisdictional wetlands within the proposed property boundaries for the North or South Campuses," as discussed above. And the North and South Campuses are not the only locations where the project could adversely affect wetlands: STREAM's site plan application to the Town of Alabama indicates that massive concrete "duct banks" will be required to connect the North and South Campuses to power sources; these banks are nowhere fully described in the SEQR application, though the Town of Alabama Site Plan Application indicates that horizontal directional drilling (HDD) is proposed to be used to avoid impacts to wetlands and waterways and the DACs Assessment indicates they will occupy five full acres.

[48] Curiously, STREAM's SEQR application also includes a guarantee from GCEDC (via its water supply entity, STAMP Water Works), that the STAMP site "currently has 970,000 gpd of available water capacity at the site." *See* Letter of Peter Zeliff on behalf of STAMP Water Works, January 5, 2026, on behalf of STAMP waterworks. GCEDC's agreement with Genesee County for water to be supplied to STAMP, however, guarantees just 200,000 GPD. The application provides no information about the source of the remaining 770,000 GPD or the extent to which the difference between reserving 10% of all water available to STAMP vs 2.5% of all water available to STAMP (if Mr. Zeliff's representations were correct) might factor into GCEDC's SEQR analysis.

DACs Assessment at 5. The information provided indicates that excavation for and disturbance from these "utilities" will be massive: the April 6 "Responses to Comments" document states:

> "The project includes two parallel telecom duct bank pathways [connecting the North and South Campuses] with a minimum 25- foot separation between pathways…each duck bank will have an approximate cross-sectional envelope of 9-feet wide by 9-feet depth. With final dimensions to be confirmed during detailed design." In addition, STREAM has stated that HDD must be used in order to avoid wetlands in the path of the proposed duct banks and that they will need to be built outside the Crosby Road right-of-way within an area totaling 100 feet wide."

This significant engineering challenge will involve levels of disturbance at the STAMP site that far exceed those measured during prior archaeological investigations and raise serious concerns about the extent to which the as-yet-detailed duct banks may disturb Nation archaeological resources, as well as waters on the STAMP site. Yet plans for the half-mile long duct banks remain completely conceptual.

By the terms of STREAM's application, the duct banks are necessary to the functioning of the Double Reed facility. SEQR requires that these necessary project components be included in plans so that their environmental impacts can be studied.

2. Dewatering

STREAM's application confirms that construction of the Double Reed complex, a process projected to last four to five years, will require "dewatering." Dewatering is the removal of groundwater or surface water from a site, typically through pumping, to create a dry, stable environment for excavation and foundation work. Dewatering can be used to lower the water table, often significantly where required by large-scale construction, and/or to pump groundwater away from construction areas. STREAM's application indicates the need for dewatering but no information about (1) how much water will be pumped from the ground; (2) for what period of time; (3) on what portions of the site dewatering will occur; (4) where the pumped water will be discharged; what (5) what the discharge rate will be, or other basic questions about this highly impactful activity proposed for the construction period. See Geotechnical Summary at 128. Instead, the application merely asserts "high confidence" that dewatering activities, whatever they may be, "will not affect distant residential water supplies." *Id*.

Nation residences rely on well water, and Nation citizens rely for cultural and ceremonial purposes on the waters that flow from STAMP onto the Nation, including waterways on and adjacent to the Double Reed project site. Far more information is required to determine what the impacts of dewatering will be on the Nation and the environmental conditions on which its citizens rely.

3. Stormwater

STREAM's April 6 SEQR submission increases by nearly two full acres the size of stormwater impoundments, as measured by surface area, and nearly half a million gallons as measured by volume, for a total of 7.25 acres and 2.3 million gallons to be impounded, while declining to provide measurements for these massive impoundment structures.[49]

As the attached maps show, significant portions of the Nation lie within a 100-year floodplain. And as noted previously, Nation citizens rely on well water. STREAM's facility would be the largest (by far) impervious surface increase ever at STAMP; despite serious flaws in stormwater plans and disagreement among various entities regarding drainage pathways off the STAMP site.

STREAM falsely states that "there are currently no… stormwater SPDES outfalls on the property."[50] In fact, there is a stormwater outfall on the South Campus constructed by Plug Power that discharges directly into a waterway that flows on to the Nation. It is unclear to what extent Plug has monitored this stormwater pond or its outfall since suspending construction at STAMP nearly three years ago. It is also unclear whether or to what extent STREAM can, as it proposes, use existing stormwater approvals as a part of its stormwater management, given the nature and magnitude of increase STREAM proposes in impervious surface area at STAMP.[51]

Moreover, STREAM's SEQR application contains no provisions for addressing any prohibited runoff that occurs, for example in relation to the "concrete washout," liquid emissions from vehicles, or accidental spills of coolant or other substances.

[49] *See* 4/6 EAF at 4.

[50] DACs, p. 5

[51] *See, e.g.*, DACs Assessment at 30 ("The project design includes four (4) stormwater management facilities on the South Campus. *Three (3) were approved as part of the prior development approval* plus a dry swale. This site has been evaluated for and complies with the drainage requirements of the NYSDEC New York State Stormwater Management Design Manual and SPDES General Permit for Stormwater Discharges from Construction Activity. ("The North Campus will be provided with twelve (12) post-construction stormwater management practice facilities and will maintain stormwater discharges to *four (4) existing points of discharge* from the property.").

Of particular concern to the Nation is the possibility that liquid from the closed loop cooling system, which will contain glycol, would enter the stormwater system in the event of a leak, spill, or other accidental discharge. If this occurs, glycol can contaminate surface water and groundwater. Because it is water soluble, glycol spreads easily throughout waterways, and as it breaks down it depletes oxygen in the water, which can kill aquatic plants / animals.

4. Wastewater

STREAM's stated plans for wastewater disposal lack sufficient information for appropriate impacts assessment.

STREAM's wastewater estimates appear significantly inflated, as they assume 35 GPD for each employee, despite EPA estimates of 10-25 gallons per person (where toilets only), and 20-25 where showers and kitchens are used as well.[52] In addition, the application fails to distinguish between annual averages and peak uses and provides no information whatsoever about likely trends in use during each year.

Further, an unspecified major use of water appears to be for "humidifiers," projected to use nearly 10K of water per day, per the Town of Alabama Site Plan Application (North Campus only), below. This means that a total of 10,000 gallons per day of water will be consumed by the data center complex for humidification within the buildings.[53]

In addition, wastewater disposal will require at least five "sewage grinder pump stations", apparently to grind raw sewage and pump it uphill from the STREAM facility's North Campus to the temporary sewage "hold and haul" tank near the South Campus.[54] The potential for these "sewage grinder pump stations" to contaminate waters shared with the Nation is not examined, nor is a spill plan for trucking, if hauling waste off site.

5. Waste and e-waste

Widely available information suggests that servers only last 2-5 years and must be replaced at that interval. However, STREAM's application fails utterly to address a plan for disposal of such e-waste, despite rampant incidence of e-waste dumping associated with data centers.[55]

---

[52] *See* "Calculations and 'Rules of Thumb' for Estimating Water Usage," USEPA, at https://www.epa.gov/sustainability/lean-water-toolkit-appendix-c.

[53] *See* Bowman Engineering Report of April 2, 2026, at 3.

[54] *See* Bowman Engineering Report of April 2, 2026, at 3 ("The sanitary demands generated by the two (2) proposed buildings will be accommodated by on-site sewage grinder pump stations. There will be two grinder pump stations for each building, one at the north and south ends of the buildings. The guard house will also be provided with a grinder pump station.").

[55] *See*, e.g. https://epm.ucdavis.edu/policy-briefs/mitigation-ai-data-center-e-waste-federal-level

Presumably, the disposal of e-waste accounts for at least some of the projected three diesel truck trips per day to and from the site, but this assumption is mere conjecture. E-waste contains hazardous chemicals and heavy metals. Its constant removal and installation creates serious threat of contamination, as well as questions about the offsite environmental impacts including the potential for traffic accidents/spills etc. Nowhere in STREAM's application are these issues addressed.

The lack of information about server waste raises serious concerns regarding the sketchy nature of the STREAM's plans for waste disposal more generally. The current EAF lists a rate of solid waste 48 TPY,[56] but its initial proposal reviewed in 2025, which was less than half as large, estimated 120 TPY: this defies logic. How can the facility be more than twice the size but generate less than half the waste?

G. Visual Impacts

As the Nation has repeatedly pointed out, analysis of visual impacts cannot be adequately conducted without reference to Nation citizens. Visual impacts from the proposed data center projects are a grave concern for the Nation and its citizens, and the nature of those impacts on the Nation cannot be assessed or understood without the Nation's involvement.

The hulking proposed data center structures will fundamentally alter the visual landscape as viewed from and around the Nation by Nation citizens, as well altering views of the Nation from elsewhere. Double Reed's three buildings would comprise 2.2 million square feet and by STREAM's latest account would be at least 64 feet high. While it may be difficult to grasp abstractly the enormity of the visual impact of such facilities – particularly in a rural, undeveloped area – conceptualization and assessment of those impacts on the people who will experience them daily is required here.

The Nation has never been consulted on how to choose viewpoints to analyze, how many viewpoints should be required; what conditions and/or times of day analysis should consider (dark, dusk, sunshine, cloud cover), or other key analytic factors.[57] And STREAM's visual impacts analysis fails to provide any viewpoint locations from the Nation in relation to the South Campus, and only one, VP9 – essentially located in the woods – as to the North Campus.

[56] 4/6 EAF at p. 9

[57] *See, e.g.,* "Guide to Assessing Visual Impact Assessments for Renewable Energy Projects" at 18-19, National Park Service (2014) (summarizing elements of the "complex multistep process" required to conduct an adequate visual impact assessment, including "gathering information about [viewshed] users" and analyzing "sensitivity of the viewers to changes in the landscape"); "Evaluating Photosimulations for Visual Impact Assessment," National Park Service (2021); DEC Program Policy on Assessing and Mitigating Visual and Aesthetic Impacts (2019).

These failures yield fatally flawed results: in reality, the Edwards Vacuum factory east of Crosby Road is visible from multiple locations along the Nation's border, yet STREAM contends its facilities – which will dwarf Edwards in size and be located significantly closer to the Nation, west of Crosby Road – will not be readily visible.[58] In fact, STREAM's North Campus buildings will be more than 20 feet higher than the Edwards building and Double Reed will occupy roughly six times the square footage, creating towering industrial monoliths that will dominate the viewshed.

Moreover, as previously noted, vegetative screening proposed by STREAM will take many years to mature; for trees to mature sufficiently to obscure 64' high buildings will take decades, much longer than the data center's likely lifespan of 10-15 years.

SEQR's requirement to analyze visual and aesthetic impacts requires further study of Double Reed's impacts in consultation with the Nation.

H. Community Character

Likewise, STREAM provides no assessment whatsoever of existing community character on and around the Big Woods, the eastern side of the Nation's Territory, or the Nation as a whole. Here the character is not just rural but completely undeveloped, with unique and fragile ecological communities supporting Seneca cultural and subsistence activities. The Nation's border with STAMP is 1.5 miles long and the nearest Nation road west of the border is nearly a mile away – that is a 1.5 mile by 1 mile block of completely undeveloped habitat that will be profoundly affected by STREAM's project. Moreover, as discussed below, traffic incursions from drivers associated with Double Reed could create significant impacts for the Nation's community character as well.

I. Emergency Services

The Nation remains profoundly concerned about dangers from fires and explosions posed by STREAM, and STREAM's failure to provide more than a boilerplate plan for emergency response, even after nearly two years of consideration for locating at STAMP.[59] The development of STAMP as an industrial site is premised on the need for an emergency services study, and SEQR review should not be completed until that study is conducted.

[58] *See, e.g.*, VP9 simulation, Visual Impacts Analysis.

[59] *See, e.g.*, generic "Emergency Response Site Plan" dated December 2024.

This is particularly true for a facility such as Double Reed intended to be supplied with lithium-ion Uninterruptible Power Systems (UPS).[60] According to fire protection experts, "Nearly every notable fire event in data centers in recent years has involved lithium-ion batteries in some way."[61] According to the National Fire Protection Association:

> The most recent example was a blaze triggered by a battery explosion at a South Korean data center last September. The fire halted more than 600 online government services, including tax, postal, and mobile ID systems. Nearly 200 firefighters needed 10 hours to bring the blaze under control. Batteries were also involved in a 2021 fire at a data center in France that destroyed the entire building and 30,000 servers, and they were blamed for a pair of fires at a Virginia data center last September.
>
> "[N]ew concerns are emerging over lithium-ion batteries in facilities being built now. Almost always, lithium-ion batteries in data centers show up in one of three places: in a large shipping container-type structure outside the facility; clumped together in a conventional battery room somewhere within the data center; or, increasingly, distributed across the entire facility within each server rack, so that each rack has its own UPS backup."
>
> "Data center owners, battery manufacturers, and even many fire protection engineers who have seen the testing data argue that decentralizing the batteries among the racks provides a key fire protection benefit: because the batteries are spread out, a potential fire or thermal runaway will not impact neighboring batteries, as it could in a dedicated battery room. Limiting the number of batteries involved in thermal runaway also limits the quantity of flammable off-gassing that might occur, ensuring that the atmosphere remains well below the explosive limit in the often cavernous data halls.
>
> Fire test data proving that hypothesis, however, is hard to come by, because many companies are reluctant to share data. 'As fire protection engineers, without that data, it makes it really hard to do anything other than what's in the code,' said Wakelin."

The Nation sits on the front lines of any emergency at STAMP, and explosion of UPS systems at Double Reed could have devastating effects on the Nation's woods, people, and future generations. The risks of fire and other emergencies at Double Reed on the Nation must be fully assessed as a part of SEQR review.

---

[60] *See* Emergency Services Confirmation Technical Study.

[61] https://www.nfpa.org/news-blogs-and-articles/nfpa-journal/2026/02/11/lithium-ion-batteries-and-data-center-safety ("The Lithium Ion Problem," National Fire Protection Association Journal, Feb. 11, 2026)

J. Traffic

STREAM's assessment of traffic impacts is cursory and conclusory at best, and fails to consider the extent to which dramatic increases in traffic next to the Nation may impose a pollution burden on the Nation and its citizens, instead hinging its conclusions on the threshold established by the FGEIS.[62] In fact, as presented in the Technical Summary, traffic would increase by nearly 400 trips to and from the STAMP site per day, a massive increase in current traffic to and from the site, given that STAMP currently lacks any operational tenant.

And the "analysis" fails utterly to address the likelihood that some of these nearly 400 trips per day will lead to traffic on Nation Territory. The Nation is home to multiple restaurants, convenience stores, and gas stations, among other businesses; but the possibility that vehicles associated with Double Reed might visit Nation Territory is not even considered, much less analyzed. Nation roads do not have lighting, curbs, sidewalks, or, in many cases, posted speed limits. How will up to 400 new vehicle trips per day factor into traffic impacts like wear and tear on roads, traffic accidents, speeding, and/or other impacts? STREAM's application contains no information or analysis whatsoever on this issue.

Additionally, the traffic assessment fails to address impacts to local schools busing students, including Tonawanda Seneca Nation children. The III-c Site Plans shows the Primary Trucking Route on Route 77 (Alleghany Road). This route bisects Bloomingdale Road, Marble Road, Ledge Road, and Akron Road – all roads currently used by Akron Central School District to transport children within the District.[63] There is zero information on how increased traffic, specifically "...800-1000 employee vehicles and 100-200 delivery trucks daily at the peak of construction" will impact school busing and the potential impact buses will undoubtedly encounter with an additional 1000 vehicles and 200 trucks per day.

K. Geoarchaeology / Geotechnical

While STREAM's April 6 Geotechnical Summary indicates that additional geotechnical testing was completed by STREAM in February of 2026, it does not indicate where test bores or test pits were located, to what depth, or what the results were for each test or provide any information whatsoever about the "Seismic Cone Penetration Tests (SCPTu)" or the "Multichannel Analysis of Surface Waves (MASW) survey" purportedly carried out. Instead, the Summary simply makes sweeping generalizations like "[t]he investigations reveal a consistent and favorable subsurface

[62] See, e.g., Traffic Tech Summary at 2 ("In conclusion, the traffic analysis indicates that Project Double Reed's contribution to overall park traffic is minor"); id. (failing to assess current "park traffic" and instead couching traffic impacts analysis in terms of FGEIS thresholds); and DACs Assessment at 14 (same).

[63] See https://resources.finalsite.net/images/v1756487051/akronschoolsorg/hlqr6zw9comqcis7oojb/25-26StreetListing.pdf

profile for large-scale development" and "[g]roundwater levels are generally expected to be found between 10 and 15 feet below grade." These claims are wholly unsubstantiated and are particularly concerning given STREAM's repeated contention that no wetlands exist on the STREAM project site.[64]

Moreover, as discussed above, the Geotechnical Summary does not describe conditions in the five acre area – over half a mile long and more than 100 feet wide – where the 9' by 9' concrete duct banks will be constructed, indicate whether geotechnical testing included that area, or explain how prior archaeological testing – which involved significantly shallower test pits than will be required for the STREAM buildings and duct banks – provides any information about what might be encountered at greater depths. And the EAF falsely indicates no excavation will be needed for the project.

STREAM's submission leaves significant and wide-ranging gaps in the information necessary to assess geotechnical and geoarchaeological issues. These issues bear directly on threats to the Nation's cultural resources and must be fully assessed.

L. STREAM's Double Reed Facility Should Not Receive Tax Incentives

The Nation calls upon GCEDC to reject STREAM's application for $1.4 billion in tax incentives. The environmental and social costs of Double Reed should be included in GCEDC's cost-benefit analysis, and given the wide-ranging harms posed by the project to the Nation and surrounding communities, as discussed above, the incentives request should be rejected. This is particularly true because the identity of the tenant seeking to occupy STREAM's data center facility remains hidden from the Nation and the public as a whole and its track record in other communities therefore cannot be examined, and because the EJSL and CLCPA prohibit projects that impose disproportionate pollution burdens on the Nation.

[64] *See* discussion above; *see also* Bowman Engineers Report of April 2, 2026, at 1 ("there are no delineated wetlands on the subject property"). *Compare* Letter of DEC, March 30, 2026 (finding jurisdictional wetlands on both the North and South campus parcels and indicating that DEC's amended wetlands regulations will apply to construction of the STREAM facility).

IV. Conclusion

We look forward to hearing from you regarding this important matter.

SUPREME COURT
STATE OF NEW YORK COUNTY OF GENESEE

TONAWANDA SENECA NATION, on its own behalf and as *parens patriae* on behalf of its citizens, and the SIERRA CLUB,

Petitioners-Plaintiffs,

vs.

GENESEE COUNTY INDUSTRIAL DEVELOPMENT AGENCY d/b/a GENESEE COUNTY ECONOMIC DEVELOPMENT CENTER, STREAM U.S. DATA CENTERS, LLC, and the TOWN OF ALABAMA,

Respondents-Defendants.

AFFIRMATION OF VANCE WYDER

Index No.:

I, Vance Wyder, of legal age, affirm under penalty of perjury pursuant to N.Y. C.P.L.R. § 2106 the following:

1. I am a citizen of the Tonawanda Seneca Nation and have lived just off the Nation's Territory in Basom, New York all my life. I am also a veteran of the U.S. Navy, having served overseas and been injured while on active duty.

2. I am also a member of the Sierra Club.

3. I live about a half mile from the Western New York Science and Technology Advanced Manufacturing Park ("STAMP") site and reside with my wife at 1181 Judge Road, Basom, New York.

4. I can see the STAMP site from my residence and the gazebo in our backyard. We spend most of our time during nicer weather in our gazebo, which is located behind our home and faces the STAMP site. Photographs of the gazebo and the view are attached as **Exhibit 1**.

5. Construction traffic for the STAMP site travels along Judge and Crosby roads in front of and along my residence, especially during rush hour in the early morning and evening.

6. I am retired and like to sleep in but I am regularly disturbed by truck traffic going towards the STAMP site during morning rush hours.

7. I can hear disturbing construction noises occurring at the STAMP site from my residence, such as tamping and other loud activities. The vibrations have shaken my home.

8. The construction of the proposed data center at the STAMP site (the "Project") will increase the construction traffic and noise that disturbs and diminishes the enjoyment of my home and backyard. My wife and I have lived here for 52 years but intend to try to sell our home if the data center moves forward.

9. Once operational, the Project will operate continuously, 24 hours per day and 7 days per week for 365 days per year. The constant noise and lighting from the Project will disturb and diminish my use and enjoyment of my home and backyard.

10. I take pleasure in observing the deer and wildlife that frequent my property and the surrounding area. The increased noise, light, traffic, and human presence from the construction and operation of the Project will likely disturb the wildlife and make them avoid the area where I live.

11. I visit the area next to the STAMP site known to the Tonawanda Seneca Nation as Big Woods regularly. I started visiting the area when I was about eight or nine years old. My grandfather took me there and showed me how to harvest Slippery Elm to make baskets, rattles, and shoes.

12. I am very concerned that if the Project moves forward, then the Big Woods would be negatively impacted, including the resources that can be found in the Big Woods.

13. During hunting season, October through December, I visit the Big Woods often. I hunt deer, rabbits, coyotes, partridge, and pheasants. Most of my meat consists of animals harvested from the Big Woods.

14. I also trap on occasion in the Big Woods. I trap fox, raccoon, coyotes, muskrat, mink, beaver. I use the furs to make purses, medicine bags, and hats.

15. I also fish for bass and pike and remove some of the invasive carp with my bow.

16. In the summer, when I am harvesting plants and medicines, I visit the Big Woods at least three times annually.

17. The creator has given us the opportunity to use and harvest medicines from the Big Woods and our elders have taught us how to properly harvest and use these medicines.

18. I am aware of several medicines in the Big Woods that are important for the Tonawanda Seneca Nation, including bear root, wild lettuce, and the burdock plant.

19. I also harvest frogs from the Big Woods. Frogs consume a certain flower from the Big Woods and then they extrude a substance that can be used as medicine. I harvest these frogs from the Big Woods.

20. I also harvest a medicine from the Slippery Elm to make a tea.

21. There are wild roses in the area that can be consumed for medicinal purposes.

22. In addition to traditional medicines, I also harvest berries from the Big Woods. I collect red raspberries, blackberries, and strawberries.

23. I have taught my sons and grandchildren how to hunt and harvest traditional medicines in the Big Woods.

24. I will also visit the Big Woods with my family to observe wildlife such as bald eagles.

25. The construction and operation of the Project will reduce my use and enjoyment of the Big Woods due to the Project's noise, light, traffic, and pollution. The Project's construction and operation also threatens the cultural practices that I engage in the Big Woods.

26. The animals and game that I hunt in the Big Woods will likely avoid the area due to the disturbance caused by the constant noise, light, traffic, and air pollution of the Project, diminishing both my ability to hunt and the pleasure I derive from the activity.

27. The best areas to hunt in the Big Woods are the areas closest to the STAMP site. Animals in these areas may go further into the Big Woods to avoid the disturbances from the STAMP site, which makes hunting them more burdensome.

28. The medicines and plants that I gather often grow in the waters that flow through the Big Woods. The STAMP site and the Project is upstream from these waters.

29. Any pollution from the Project will travel by surface or groundwater towards the Tonawanda Seneca Nation and the Big Woods, negatively impacting the plants and medicines in the Big Woods.

30. I understand that the Project proposes the bulk storage of significant volumes of petroleum for its backup generators.

31. During my professional career, I worked for New Energy Petroleum Company (NEPCO), based out of Batavia, New York. In my role, I was responsible for cleaning up and recovering chemical and petroleum spills.

32. The environmental response at many of the sites that I worked on often lasted for years and even decades due to the long-term and widespread impacts of petroleum spills in the environment.

33. I was involved in cleanups across Western New York, including ones in East Aurora and the City of Tonawanda.

34. I understand first-hand the devastating consequences of petroleum spills on the environment and ecology of an area and their long-term impacts on natural resources.

35. The Project's proposed use, transport, and storage of significant volumes of petroleum product increases the likelihood of a spill occurring at the STAMP site.

36. If a spill were to occur at the Project site that reached surface or ground water, it would have devastating and long-term impacts on the Big Woods and the Nation's territory.

Pursuant to N.Y. C.P.L.R. 2106, I affirm this 17th day of June, 2025, under the penalties of perjury under the laws of New York, which may include a fine or imprisonment, that the foregoing is true, and I understand that this document may be filed in an action or proceeding in a court of law.

Vance Wyder

SUPREME COURT
STATE OF NEW YORK COUNTY OF GENESEE

TONAWANDA SENECA NATION, on its own behalf and as *parens patriae* on behalf of its citizens, and the SIERRA CLUB,

Petitioners-Plaintiffs,

vs.

GENESEE COUNTY INDUSTRIAL DEVELOPMENT AGENCY d/b/a GENESEE COUNTY ECONOMIC DEVELOPMENT CENTER, STREAM U.S. DATA CENTERS, LLC, and the TOWN OF ALABAMA,

Respondents-Defendants.

AFFIRMATION OF LEVI WINNIE

Index No.:

I, Levi Winnie, of legal age, affirm under penalty of perjury pursuant to N.Y. C.P.L.R. § 2106 the following:

1. I am a citizen of the Tonawanda Seneca Nation and have lived on the Territory my entire life.

2. I live about a mile from the Western New York Science and Technology Advanced Manufacturing Park ("STAMP") site. I reside on the Nation's Territory along Judge Road, southwest of the STAMP site.

3. From my residence, I can see the lighting from the STAMP site at night from the upstairs of my home.

4. I can also hear the disturbing noise from construction occurring at the STAMP site, although construction has recently slowed. If the data center project (the "Project") moves forward, then the construction noise from the STAMP site will worsen again.

5. The Nation's citizens living on the Territory rely on private wells for their drinking and water supplies. My home is on a private well.

6. I am concerned about the Project's negative impacts on the use, safety, and enjoyment of my home.

7. The groundwater from my home's well flows from the STAMP site. If any pollution from the Project were to impact groundwater resources in the area, then my drinking water will be impacted.

8. I am also concerned that the constant, low frequency sound from the data center will have harmful and negative health impacts on myself and my pets, including my dogs.

9. I live a subsistence lifestyle. I harvest all my meat mostly from the Territory and do not purchase meat at a grocery store. I heat my house with wood harvested from the Territory.

10. I hunt deer, turkey, squirrel, pheasants, raccoons, rabbits, and frogs. I also fish on the Territory.

11. I do most of my fishing and hunting activities in the area adjacent to the STAMP site known as the Big Woods.

12. When I harvest meat from animals in the Big Woods, I share the meat that I harvest with other citizens of the Tonawanda Seneca Nation, especially those who are not able to hunt themselves.

13. I can walk to the Big Woods from my residence.

14. I go hunting one to three times per week in the Big Woods from October to January. I also visit the Big Woods during other times of the year for foraging and recreation.

15. There are trees in the Big Woods that are at least 200 years old, and it acts as a wildlife corridor. I have seen black bears in the Big Woods.

16. I will also hike and walk in the Big Woods with my dogs and I take great pleasure from observing the wildlife in the area.

17. I will also hike and stargaze at night in the areas near my home and the Big Woods. The northern lights can be observed from the Nation's Territory because of the lack of ambient light in the surrounding area. It is dead quiet on the Territory at nighttime. I take great pleasure viewing the stars and hearing the animals at nighttime.

18. The construction and operation of the Project will decrease my use and enjoyment of the Big Woods and the activities I partake there. It threatens the cultural practices of my people there.

19. The construction and operation of the Project will disturb and drive out the game from the Big Woods that I rely upon because of the data center's disturbing and constant noise, traffic, and light.

20. Migratory birds use the Big Woods and surrounding areas as a major flyway and landing zone. The Project's disturbing and constant noise, traffic, and light will drive away migratory birds, some of which I hunt including duck and geese.

21. The data center's constant, low frequency noise and outdoor lighting will decrease my enjoyment of the nighttime atmosphere and sky in the Big Woods and near my residence.

22. Waterbodies from the STAMP site flow into and through the Big Woods. Any pollution or spill at the Project site that impacts these waterbodies would therefore likely pollute the Big Woods, including the plants and animals that are located there.

23. The health and condition of the deer and other game in the Big Woods are very important to me.

24. If my ability to hunt or harvest meat in the Big Woods is reduced or eliminated, I would have no alternate location to engage in these activities. I do not harvest meat off the Territory because I am concerned about the contaminants that animals consume that affect off-Territory game.

Pursuant to N.Y. C.P.L.R. 2106, I affirm this 25 day of June 2025, under the penalties of perjury under the laws of New York, which may include a fine or imprisonment, that the foregoing is true, and I understand that this document may be filed in an action or proceeding in a court of law.

Respondents-Defendants.

AFFIRMATION OF KENITH DALE JONATHAN

Index No.:

I, Kenith Dale Jonathan, of legal age, affirm under penalty of perjury pursuant to N.Y. C.P.L.R. § 2106 the following:

1. I am a Wolf Clan Chief of the Tonawanda Seneca Nation.

2. The Tonawanda Seneca are part of the Haudenosaunee Confederacy. The other Nations that make up the Haudenosaunee are Mohawk, Onondaga, Oneida, Tuscarora, and Cayuga.

3. The Tonawanda Seneca Nation (the "Nation") is a sovereign Indian Nation. We govern our citizens and Territory according to Haudenosaunee Law. Our reservation Territory is protected by federal treaty and it is our duty to protect our Territory – the land, plants, animals, waters – for future generations.

4. The Nation's territory, known as the Tonawanda Nation Territory or the Tonawanda Indian Reservation, is situated on approximately 7,500 acres within Genesee, Erie and Niagara Counties (the "Nation's Territory").

5. I grew up on the Nation's Territory and have resided here for most of my life.

6. The Nation has more than 600 citizens, the great majority of whom live on the Nation's Territory.

7. The Nation is governed by a Council of Chiefs (the "Council") and Clan Mothers. Chiefs selected to serve on the Council are chosen by the Nation's Clan Mothers, in accordance with the Great Law of Peace, the central legal authority for all traditional Haudenosaunee nations. I am a member of the Council.

8. Under Haudenosaunee law, the Council makes decisions by consensus, by meeting together in Council and talking issues through until we come to one mind.

9. The Nation's Council and Clan Mothers are responsible for, among other things, securing the boundaries of the Territory from unauthorized intruders, protecting and conserving the Nation's natural resources, and overseeing the protection of the Nation's citizens and their traditional ways of life and governance.

10. The Western New York Science and Technology Advanced Manufacturing Park ("STAMP") site is located next to the Nation's Territory. A map depicting the STAMP site in relation to the Nation's Territory is attached as **Exhibit 1**. The map shows the approximate location of the data center project (the "Project") at the STAMP site.

11. The area of the Nation closest to the STAMP Site on the Nation's Territory is known as the Big Woods. The Big Woods is a large, mature growth forest where citizens of the Nation hunt, fish, forage, and recreate. The Nation invites members from other Haudenosaunee Nations travel to the Big Woods to hunt, fish, and gather as well.

12. We refer to this area as the Big Woods because it is the largest and most pristine woods in all of the Nation's Territory and I believe in all the Haudenosaunee Territory.

13. As it is a more mature forest, the Big Woods is more open and thus easier to hunt and gather there than other areas of the Territory, which are thicker with vegetation. It also seems to me that medicine plants grow faster and in greater abundance in the Big Woods.

14. As a result of the pristine condition of the Big Woods, it is a prime area for hunting, fishing, and gathering traditional medicines. The Nation has a program for other Haudenosaunee that allows them to hunt and gather in the area at no cost, so long as the resources are not sold.

15. About 100 hunters regularly hunt in the Big Woods area. In fact, I would estimate that 95% of all hunters on the Nation's Territory hunt in the Big Woods.

16. A significant percentage of these hunters are subsistence hunters. Any negative impact to the condition of the Big Woods or the animals there would impact those hunters' ability to provide meat for their families.

17. The Nation holds all tracts of land in common for Nation citizens. No parcel of land can be owned, claimed or held by individuals to the exclusion of the Nation as a whole, including the areas of the Big Woods.

18. With the permission of the Council and the Clan Mothers, citizens may, during their lifetime, be granted use and possession of particular parcels within the Nation's Territory. The Council and the Clan Mothers may also place restrictions or conditions on the use and possession of land within the Nation's Territory.

19. Under the Great Law, lands within the Nation's Territory such as the Big Woods are held in common by the Nation for the collective benefit of all citizens, including future generations of citizens.

20. The Nation has a duty to preserve the Big Woods for its citizens and the Haudenosaunee that use the area for hunting, fishing, and gathering medicines.

21. The Project threatens the preservation and serenity of the Big Woods, and its construction and operation will diminish the Nation's ability to protect the Big Woods against harmful and deleterious noise, lights, traffic, visual impacts, pollution, and other surrounding human development.

22. The construction and operation of the Project will diminish the Big Woods as a pristine hunting ground and forever change the character of the area with the additional noise, lights, pollution, and surrounding human development. Animals will be scared away from the Big Woods and I fear that the hunting will be less productive.

23. The Nation's drinking water on the Territory is supplied by private wells.

24. The Project is upstream from the Nation's Territory as to both groundwater and surface water resources.

25. Any spill or pollution event at the Project site that results in contamination to either ground or surface waters threatens the drinking water resources for the Nation and its citizens.

26. The Nation has no Fire Department and no Emergency Management Team. We are wholly dependent on the surrounding community for fire services and emergency response.

27. The Territory and its natural resources is all that the Nation's citizens have – if the Territory is damaged, we will have no place to go.

Pursuant to N.Y. C.P.L.R. 2106, I affirm this 25 day of June, under the penalties of perjury under the laws of New York, which may include a fine or imprisonment, that the foregoing is true, and I understand that this document may be filed in an action or proceeding in a court of law.

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the International Brotherhood of Electrical Workers (IBEW), I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Buffalo Local 41 IBEW members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
IBEW Supporter

Subject: My comments on the Requested Financial Incentives and SEQR Application from STREAM US Data Centers for Project BUFA Double Reed at WNY STAMP

To the Genesee County Economic Development Center (GCEDC):

I submit these comments as part of the public hearing record pursuant to Article 18-A of the New York General Municipal Law as well as the SEQRA Environmental Review Process for BUFA Project Double Reed - the data center complex proposed by STREAM US Data Centers for the STAMP mega industrial site in Alabama, NY.

I oppose the financial incentives request submitted by STREAM US Data Centers; I demand that GCEDC follow all of NYS DEC's recommendations; and I call on GCEDC to:

1) Reject the incentives application;

2) Conduct a Supplemental Environmental Impact Statement (EIS) focused on data centers at STAMP;

3) Conduct a Supplemental EIS for the entire STAMP site taking into account new laws and regulations as well as other changes, including changes in plans for the site since 2012;

4) Ensure that SEQR analysis incorporates review of cultural and environmental justice impacts on the Tonawanda Seneca Nation and includes input from the Nation, DEC and the State Historic Preservation Office on those impacts.

3) Conduct SEQR review that includes detailed impacts analysis for both the construction and operations phases of the project, keeping in mind that constructive is forecast to take at least five years;

4) Require prior to completing SEQR review that independent studies on issues such as noise, air emissions, geotechnical analysis, traffic, and water impacts be completed and made available to the public;

5) Require prior to completing SEQR review that a public hearing is held AFTER all studies and application materials are finalized and made available to the public.

Project BUFA Double Reed threatens the quality of life, well-being, and cost of living of all residents of New York state, including and especially the residents of nearby communities in Genesee County and citizens of the Tonawanda Seneca Nation.

I reserve the right to submit further comments on the April 6 SEQR Application and related materials once I have reviewed and analyzed these materials in order to fully assess the STREAM project's impacts.

Sincerely,

Michael A. Benson

Subject: Support the Stream US Data Centers Project at STAMP

GCEDC Board of Directors,

Dear Genesee County Economic Development Center (GCEDC) Board of Directors:

As a proud supporter of the LiUNA, I write to express strong support for the proposed Stream Data Centers project at the Science & Technology Advanced Manufacturing Park (STAMP) in Genesee County.

This project represents a historic $19.4 billion private investment in our region—an unprecedented opportunity to deliver lasting economic benefits to our communities. It will strengthen the local economy and create meaningful, long-term opportunities for working families across Western New York.

From a workforce perspective, the Stream project is especially significant. It is expected to create more than 1,200 construction jobs annually over five years, providing high-quality, family-sustaining careers for skilled trades workers. Local 435 LiUNA members are trained and ready to perform this work. Once completed, the facility will support 125 permanent, good-paying jobs and create additional opportunities for local businesses and contractors throughout the region.

The project will also generate substantial revenue for the community. It is projected to produce approximately $285 million for local taxing jurisdictions, including school districts, and roughly $270 million in local sales tax revenue from electricity usage at full buildout. These funds will strengthen public services and support critical infrastructure improvements, including water systems across Genesee County.

Stream Data Centers has also demonstrated a commitment to responsible development. Its pledge to engage with the community and address concerns related to water usage, lighting, and noise reflects dedication to transparency and collaboration.

This is a transformative economic development opportunity—one that comes once in a generation. It will deliver lasting benefits for workers, families, and the broader community.

For these reasons, I strongly urge the Board to support the Stream Data Centers project.

Sincerely,
LiUNA Supporter
